THE ENTHUSIASUM OF THE MOTOR CYCLIST. One of the most pleasing features of a big trial like the recent Six Days event is the way it attracts local motor cyclists out to see the competitors on their own little hills. This is well exemplified in these pictures of well-known riders—O. S. Bridcutt (499 Dunelt) and J. A. Watson-Bourne (976 Brough-Superior) laughingly refusing a fruit offering—on an easy hill near Blaenavon. In both cases the roadside is lined with non-competing machines.

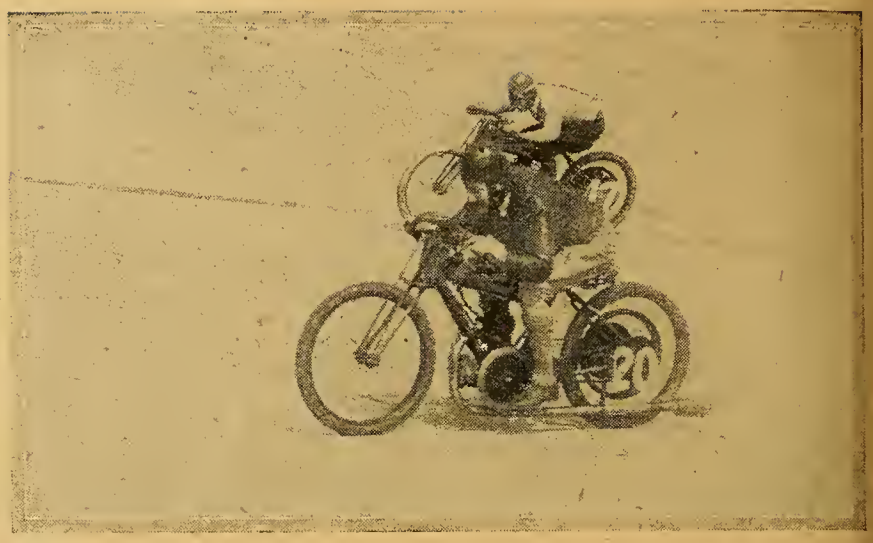
TO SUBSTITUTE THE SIDECAR.

Sir,—In a recent issue there is a paragraph headed "Indispensable," in which it is stated that "New high-powered sidecars are as much in evidence as ever they were. There appears not the slightest likelihood of any waning in their popularity, and once again may be asked, 'Where is the vehicle that can replace them?'"

Some of us in the North and a few in the South can afford to smile at this paragraph and at the question asked, because we know that the answer has been found. I can say that for my part I never want to go back to the powerful sidecar again, and other users of the L.S.D. three-wheeler that I know are equally sure.

With a J.A.P. engine that does not overheat, a comfortable roomy body which will take two adults, as well as a youngster on a seat fixed to the floor; with accommodation for more luggage than a sidecar can carry, on the tailboard, which itself will easily carry a passenger if necessary; with running cost certainly no higher than that of a heavy sidecar; with far greater comfort, sociability and safety—well sprung, soundly designed, and faultlessly made from A to Z, its working parts very accessible, and able to surprise the majority of cars on ordinary hills, steering perfectly with none of the sidecar side-drag and side-shake, and produced at £165, complete with lamps, horn, screen, hood, and tools, the L.S.D. already answers the question, and no one who has ever tried the two would think twice about it.

J. A. HUBBARD.



TWO-STROKES AT SPEED. There is nothing like two machines of the same make competing together for adding a little excitement to the average Brooklands meeting. R. Dequin and F. W. Carryer, both on 348 c.c. Ivys, having a friendly tussle at the Surbiton Club's event.

LARGE TYRES ON SLIPPERY ROADS.

Sir,—In your issue of August 31st appear the following two statements about oversize tyres:—

On page 297: "The disadvantages are found in the greater weight of the tyre, and a slightly increased tendency to sideslip. . . ."

On page 310: ". . . which reminds us that, excepting perhaps the solo Sunbeams, the large tyred machines were infinitely steadier in grease than the 26 × 2¼in. brigade."

On behalf of the thousands who are financially unable to experiment, may I ask which of your staff experts is right? I, personally, am not going to ride any more 2½in. tyres if 3in. are comfier, but at the same time I have no use for 3in. if they are jazzier. Looks as if I shall have to walk.

Sheffield. WIFFLES.

[Opinion on the relative steadiness of 2½in. and 3in. tyres on treacherous road surfaces is sharply divided. Probably "Auriga's" view that the larger tyre is more liable to side-slip is the more commonly held; the fact that practically all the competitors started the trials on brand new covers may account for the steadiness of those who used the larger sizes in the six days event. The slightly increased tendency to skid comes, if ever, when the 3in. tyre has worn its tread away, and certainly not before.—ED.]

"BUS" TABOO.

Sir,—I read with much interest Mr. J. Fairfax Blakeborough's article in *The Motor Cycle* recently.

Having been connected for some time with the naval side of flying, and thus in contact daily with many types of "aeronauts" (his term), may I say that the expression "'bus" as applied to machines is strongly deprecated and very warily used in the Services to-day.

I once overheard one delinquent report to his C.O. that "his 'bus" was ready for flying. He was told to remember that he "wasn't in London."

In my opinion, the expression is as bad as "mount" when applied to a motor-cycle. ARGUS.

Hants.

SATISFACTORY PUNCTURE PREVENTIVE.

Sir,—May I commend to your earnest notice, and that of all motor cyclists, the puncture sealing "dope" known as Jackson's Impervo? Myself and twelve friends have just returned from a 700 miles camping tour in the West Country. There were nine push cycles, two motor cycles, and an 8 h.p. Rover car, with a home-made two-wheel trailer behind it. The only tyre trouble was with the car, two large punctures and a burst. We rode a great deal on flinty roads, with quite heavy packages and by no means new tyres, and we had left the mascot behind! So what we should have mended had not Impervo done it for us, I do not know.

G. L. PARKS.

THE CANCELLATION OF THE 500 MILE RACE.

Sir,—As one interested in motor cycle racing, I see with great regret that the 500 mile race on the 23rd inst. has been cancelled owing to the alleged likelihood of annoyance to the neighbouring Weybridge residents. I have for some time regarded the attitude of the track authorities towards the B.M.C.R.C. with misgiving, and fear that the restrictions imposed are but the thin end of the wedge. First we have compulsory silencers, now the cancelment of an important fixture: What are we to expect next? There seems to me little doubt that the B.A.R.C. is trying to push all the responsibility of noise on to the shoulders of the handy scapegoats, the motor cyclists, in an effort to propitiate its neighbours. As to the latter, surely they can be more or less disregarded in view of the fact that they have put up with the so-called nuisance, *i.e.*, open exhausts, for fifteen years. In any case, it would be interesting to know whether these residents have any power to take action against what occurs on neighbouring *private* ground during the daytime, any more than people living near shipyards, aerodromes, etc., can prevent the activities of the latter. It would appear to me that the B.A.R.C. should take a firm attitude in the matter. Surely it must be realised that the more it gives, the more will be demanded of it, in which case the prospects of long-distance racing, both car and motor cycle, at Brooklands look very black.

Is there not still time to organise a 500 mile race in which silencers of a certain size in proportion to engine capacity could be made compulsory, and, if so, would Mr. Locke King consent to allow the use of the track for it? I have no doubt that a race on these lines would be even more interesting from a technical point of view than one in which open exhausts were used. A. ARNOLD.

What Was It?

A yellow two-seater three-wheeler was seen on the Brighton road last week-end. It was nicely streamlined, the two heads of a big flat-twin poked through its sides, and it had a central front wheel.

New Road Open.

The new stretch of road between St. Albans and Harpenden, which has been prepared to cut off a dangerous corner, is now completed, and has been opened for general use. The surface is excellent, and the advantage of the change beyond question.

Well on the Way to Recovery.

R. Clayton Russell, the Norton rider who had a serious accident in the Six Days Trials, sends us a cheery letter thanking all enquirers for their sympathy. He alleges that his ear was found being chewed by a puppy dog, but that it was retrieved in time and has now been successfully riveted in place by the house surgeon of the Stafford General Infirmary.

The Oldest Motor Cyclist.

Recently the daily newspapers have become alive to the fact that motor cycling is not wholly a young man's pastime, and a controversy has started as to who is the oldest motor cyclist. Three years ago, in June, July, and August, 1919, a similar discussion took place in the columns of *The Motor Cycle*, when it was discovered that a Mr. Elias Blackburn, aged 89, of Redcar, easily earned the honour.

Amateurs on Alms Hill.

Whether private owners can even approximate the performances of trade riders on freak hills will be seen on the afternoon of the 17th inst., at Alms Hill, Henley, which competitors in the recent Six Days Trials ascended with such monotonous regularity. On this occasion the hill will be the scene of an impromptu climb by members of the Oxford Motor Club. All motorists in the vicinity are invited to help by exhibiting the prowess of their mounts, and adding thus to the interest of the proceedings.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Was He Wearing Goggles?

From a local paper :—" James —— was summoned for riding a motor cycle not having an efficient silencer. Defendant said that the silencer must have fallen off, and he did not notice its absence until stopped by the constable. Fined twenty shillings."

No Anglo-Dutch Trial.

Inquiry at the A.C.U. headquarters last week elicited the information that the Anglo-Dutch trial arrangements have been dropped.

Justice Travestied.

A 10s. fine for being drunk in charge of a motor cycle and 40s. for riding a machine with a straight-through exhaust pipe is how the Coventry magistrates administered justice last week.

Three-speed Scott in Yorkshire Trial.

Scott enthusiasts all over the country will be interested to hear that a three-speed model made its appearance in an experimental form at last Saturday's Yorkshire Centre team trial.

Victimisation of Glasgow Garages.

Three young men, evidently working together, have been engaged in victimising Glasgow garages by the very simple method of ordering and paying for one article, while helping themselves to others.

Further Norton Records.

On the evening of the 6th inst., V. Horsman (588 Norton) made successful attempts on two short distance records as follows :—10 mile standing start, 8m. 38.79s., 69.39 m.p.h. ; 5 miles flying start, 4m. 12.2s., 71.37 m.p.h.

A Week-End Rescue.

Apropos of what some machines can do when put to the test, a 496 c.c. Martinsyde was seen, in a part of the country by no means free from hills, gallantly towing a well-laden family sidecar which had broken down—and apparently making light of the effort.

SIX DAYS HIGH SPEED TEST. Last week a 48 hour trial was undertaken by W. B. Pickering, riding a 770 c.c. B.S.A. sidecar. His plan was to ride eight hours daily on Brooklands, for six days, under A.C.U. observation. Despite some valve trouble 40 m.p.h. was maintained each day from Monday until Thursday. On Friday the forks broke and the crank case was damaged. This resulted in oil leaks and a seized engine on the Saturday.

YORKSHIRE TEAM TRIAL.

Haggas Shield Event Organised by Harrogate Club attracts 17 Teams. 9 Finish.

HELD under the auspices of the Harrogate Club, the inter-club team trial of the Yorkshire Centre A.C.U. took place on Saturday last. The winning team will hold the Haggas Shield, and gold, silver, and bronze medals are also presented.

The event drew entries from 17 teams, each consisting of two solo machines and one sidecar, with the exception of two cases where an L.S.D. and a Morgan figured as the three-wheelers.

Considerable interest had centred in the Ilkley Club's entry, which consisted of three Scott machines, including what was described as the "hush machine," and which turned out to be a new type with three-speed gear box.

Of the 17 teams four were from Bradford, Harrogate coming next with three, while others were from clubs covering a wide area, in which Scarborough and Sheffield were both represented.

On Boltby Bank.

Commencing at Harrogate the first portion of the course led by way of Knaresborough and Boroughbridge up into the wolds east of Thirsk, the first real test being the ascent of Boltby Bank. This hill proved a stern obstacle to some of the sidecar machines, but there were comparatively few failures. Amongst conspicuous successes, the Scott team showed up well, while G. M. Townsend went up at speed on his P. & M. sidecar.

Later on in the morning Ingleby Greenough was tackled, followed by a really tough piece over the moors, where the going literally represented ploughing through the wiriest varieties of Yorkshire ling and heather.

The lunch interval followed arrival at Helmsley, and on the resumption the way led back to Ingleby Greenough, where a detour was made. The ascent of Arden Bank was the next obstacle, but this was generally overcome in good style, the recent spell of dry weather having left the surface fairly firm, though the gullies were both numerous and deep.

A striking effect caused by exhaust smoke and reflections at the watersplash near Boltby village.

Moorland Going.

After another moorland run of some five miles, the descent of Keppic Bank was made, the route then leading back into the Yarm-Thirsk road. A milestone check was made on the main road back to Harrogate, where the first competitor was due at 6.40.

The results have not yet been announced, but nine teams completed the course, namely:—

ILKLEY M.C. AND L.C.C.—W. Moore (532 Scott), J. S. Duxbury (481 Scott), W. H. Clough (592 Scott sc.).

BRADFORD M.C. AND L.C.—W. Haggas (499 Triumph), H. S. Moorhouse (499 Triumph), G. M. Townsend (555 P. and M. sc.).

HARROGATE AND DISTRICT M.C.—D. Moore (499 Sunbeam), A. Hill (348 New Imperial), G. W. Hill (481 Scott sc.).

LEEDS AND DISTRICT.—W. T. Brand (550 Triumph), W. Backhouse (499 Triumph), S. Jepson (A.J.S. sc.).

SCARBOROUGH AND DISTRICT M.C.C.—M. Marriott (348 Coventry-Eagle), C. E. Jackson (595 Beardmore-Precision), D. Brigham (678 Omega sc.).

DARLINGTON AND DISTRICT M.C.C.—B. M. Catherick (499 Dunelt), C. Bone (349 Wetherell), W. Brown (A.J.S. sc.).

YORK AND DISTRICT M.C.—G. Bower (490 Norton), E. Wasling (499 Triumph), G. W. Shepherd (L.S.D.).

HARROGATE AND DISTRICT M.C.C.—C. Botterill (248 Excelsior), T. F. Leak (348 Massey-Arran), B. Stuttard (Morgan).

SHEFFIELD AND HALLAMSHIRE M.C. AND L.C.C.—H. M. Beeden (499 Sunbeam), W. L. Adams (249 Levis), E. Smith (Martinsyde sc.).

Of the casualties W. Holloway (770 B.S.A. sc.) retired early with broken bearings to front wheel, while H. Robinson (976 Zenith) succumbed to belt trouble.

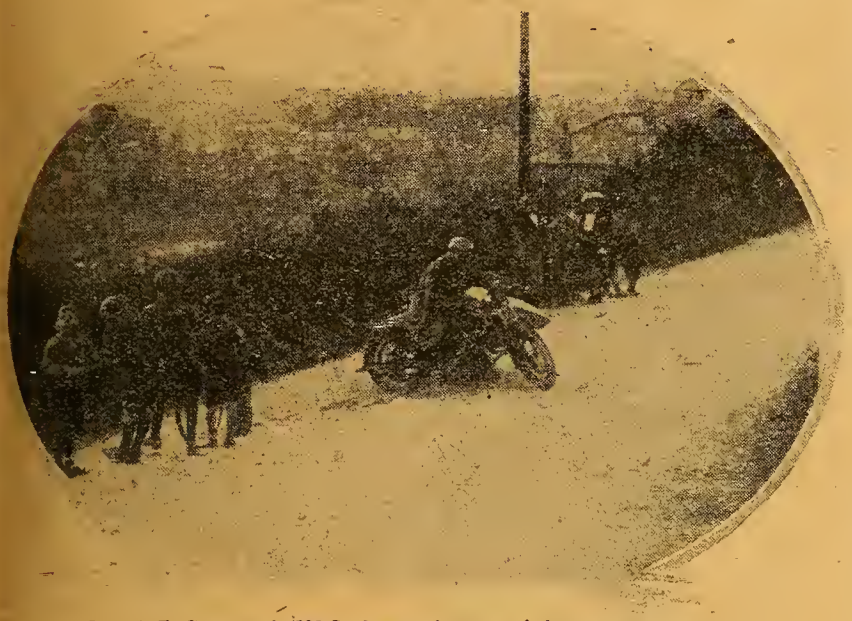
P. Shaw (555 P. and M.) had the misfortune to meet an erratic Ford van outside Harrogate and continued his journey minus the front portion of his sidecar. Even then he might have stayed the course had the Fates been kinder, for he continued until the bottom of his sidecar dropped out, and only then had perforce to retire.

The event can be considered an entire success and another credit to the enterprise of the Ilkley Club. The Haggas Shield, presented by Mr. W. R. Haggas, is held for one year and carries with it title of Yorkshire champion team, at present held by Bradford.

S. M. Haigh (555 P. & M. sidecar) on a steep portion of Boltby Bank.

A MIDLAND INTER-CLUB TRIAL.

An M.C. and A.C. Sporting Half-day Event for Club Teams.



J. E. Greenwood (599 Sunbeam sc.) on one of the many hairpins.

EIGHT teams gathered near the top of Rose Hill, Rednal, on Saturday last, to compete for the handsome cup offered by Mr. Easting, of windscreen fame.

The event was organised by the Midland Cycle and Athletic Club over three 24-mile laps of a sporting though comparatively easy course in the vicinity of Bromsgrove. The chief obstacles consisted of one good watersplash, which was responsible for a number of failures, a stop and re-start test on Hagley Wood Hill (each lap), Walton Hill, a sharp loose-surfaced corner part of the way up Beacon Hill, an acute right-handed hairpin a few miles further on, and an acceleration test on Rose Hill (first lap only).

The following clubs were represented by teams of three solo and three passenger outfits each :—

Birmingham, Wolverhampton, Kidderminster, Coventry and Warwickshire, Sutton Coldfield, West Birmingham, South Birmingham, and the M.C. and A.C.

Watersplash as Eliminating Test.

Within a few miles of the start the watersplash was encountered, and since it consisted of a ford some 14 inches deep (in the worst part) and twenty yards long, lying parallel to a main road, it afforded much amusement to quite a large crowd of spectators.

On the first lap only the Sutton Coldfield team emerged from this obstacle with clean sheets. W. Lovegrove (633 Norton sc.) spoiled the chances of the Birmingham M.C.C. by taking the water too fast and coming to a standstill. Of the Wolverhampton team Frank Smith (925 Clyno sc.) dropped on to one cylinder but came through clean, though J. Price (349 Diamond) failed and lifted his machine on to the bank. F. Adam (490 Norton), representing the Kidderminster M.C.C., failed. George Dance, who turned out with a sidecar attached to a 500 c.c. Sunbeam, was steady and good. C. A. Potts (1087 G.N.) failed, and though he made a gallant effort to restart and actually got his engine running, the water thrown up by the flywheel drowned his plugs. On subsequent laps he took the path of discretion and followed the main road.

Great hopes were entertained of the Coventry Club, only to be sadly dashed, for F. H. Brown (539 Rex-Acme sc.) was the only member of the team to make a clean crossing. The three 600 c.c. Humbers, ridden by H. Crisp, L. Crisp, and R. Grindley, were at a disadvantage owing to their outside flywheels, which threw the water over riders and ignition systems.

Momentary Stops.

The failures in the West Birmingham team were F. R. Dixon (490 Norton), R. G. Smith (349 Henley), and P. Ahearne (633 Norton sc.). N. Hall, riding a 292 c.c. O.K. for the South Birmingham club, entered the water confidently, but one unlucky splash just at the end caused a momentary stop, a fault which was retrieved by his excellent performances on subsequent laps. L. E. Clulee (292 Allon), of the same team, stopped momentarily, but restarted and rode out in good style. The record of the organising club's team was spoilt by T. Woodcock (498 Ariel) and T. Lloyd (733 Brough-Superior).

Restarting on Hagley Wood Hill proved too easy for the majority, and in the first lap only F. Adam (490 Norton) and C. A. Potts (1087 G.N.) failed to get

H. Collins (633 Norton sidecar) making the ascent of a narrow, stony portion of the course.

A Midland Inter-Club Trial.—

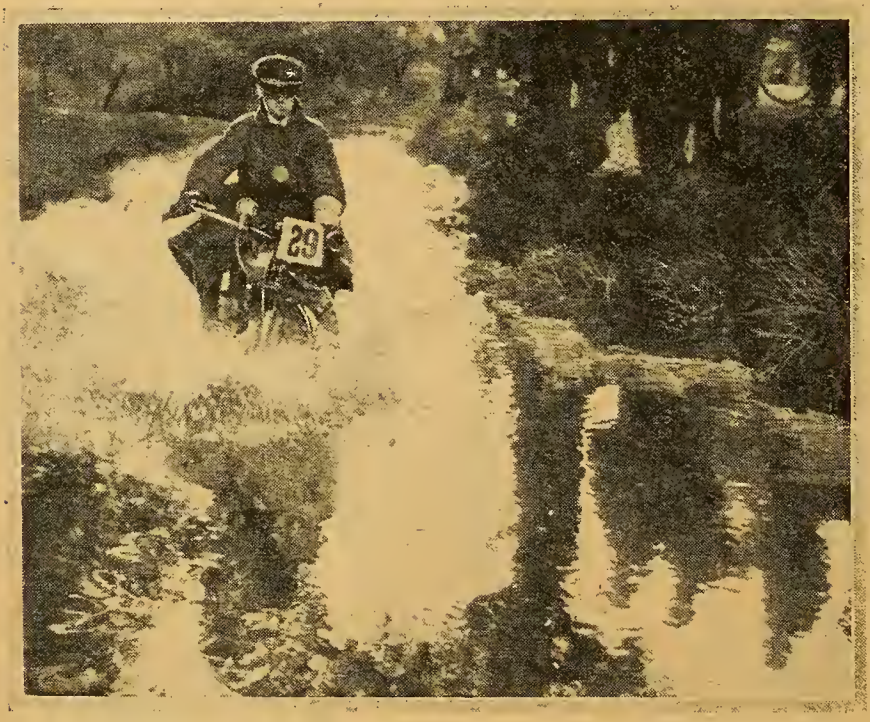
away clean, while T. Lloyd (735 Brough-Superior) made quite the star performance.

Foot Balancing Not Penalised.

Touching with the foot was not penalised, and this somewhat nullified the severity of the tests on Beacon Hill and the subsequent hairpin. During the first and more than half the second lap, only Lloyd (733 Brough Superior) was penalised on Beacon Hill, while at the hairpin Roberts (799 A.J.S. sc.) and E. Boydell (595 New Hudson sc.) came to grief, and while Potts (G.N.) was forced to reverse two or three times in order to get round. Previous to this T. Peck (498 Ariel sc.), and E. Boydell (595 New Hudson sc.), had, for some mysterious reason, failed on Walton Hill, a rise which is not sufficiently serious to cause failure except owing to bad luck.

In the acceleration test on Rose Hill the following shone, and managed to cover the required distance in less than 20sec.: V. Smith (490 Norton), F. Price (349 Diamond), C. Hough (349 A.J.S.), W. H. Smith (398 A.B.C.). E. A. Barnett (249 Francis Barnett), R. Grindlay (600 Humber), J. Montgomery (986 Brough Superior sc.). A. W. Thrush (499 Sunbeam), E. Arthur (733 Brough Superior). F. R. Dixon (494 Norton), R. G. Smith (349 Henley), A. Rollason (498 Ariel), and Woodcock (498 Ariel).

On each succeeding lap the water splash drew its toll of victims, and proved easily the centre of attraction to spectators. W. H. Smith, who was baulked on the first lap, caused much amusement on a subsequent occasion by taking the water at speed, but the A.B.C. is not a hydroplane, and the fireworks ended in a very damp fizzle. On the second and third laps there were 18 failures at this spot on each occasion.



E. Arthur (733 Brough Superior) made one of the only two non-stop performances of the Sutton Coldfield team. In the deep watersplash.

Only Six Fail to Finish.

Of the whole entry (48) there were two non-starters, C Greenwood (492 Sunbeam), and S. Marshall (349 A.J.S.), while F. Adam (490 Norton), J. Roberts (799 A.J.S. sc.), H. Collins (633 Norton sc.), A. Rollason (498 Ariel), T. Peck (498 Ariel), and T. Blumfield (994 Ariel sc.), failed to complete the course.

The organisation was excellent in every way, but by a curious coincidence the ascent of Hagley Wood Hill was somewhat complicated by the Birmingham club's run to Llangollen, which ascended the same hill at the same time. Confusion was, however, avoided by a red cross on the number plates of the latter club.

The results were as follows:—

(1) BIRMINGHAM M.C.C. (MARKS LOST, 26).
V. Smith (490 Norton), 1 stop.
W. Lovegrove (633 Norton sc.), 3 stops.
J. Lidstone (349 James).
F. Cotton (749 James sc.).
G. Kimberley (349 James).
R. G. Bedsley (599 Sunbeam sc.).

(2) WEST BIRMINGHAM M.C.C. (MARKS LOST, 48).
F. R. Dixon (490 Norton), 1 stop.
A. Cope (492 Sunbeam sc.).
R. Dumbleton (349 Henley), 3 stops.
P. Ahearne (499 Sunbeam sc.), 2 stops.
S. Sprang (499 Sunbeam).
H. Turner (490 Norton sc.), 1 stop.

(3) SOUTH BIRMINGHAM M.C.C. (MARKS LOST, 70).
N. Hall (292 O.K.), 1 stop.
H. Uzzell (976 New Imperial sc.), 2 stops.
L. E. Clulee (292 Allon), 1 stop.
H. Perrey (770 B.S.A. sc.).
J. Wilkins (249 New Imperial).
E. Boydell (595 New Hudson sc.), 3 stops.

ESSEX MOTOR CLUB'S 24 HOURS TRIAL.

From London to Bala *via* Bwlch-y-Groes and Return to Dunstable.

THE Essex Motor Club held its annual London-Bala-Dunstable 24 hours trial, a distance of 420 miles, last week-end. Starting from the Castle Hotel, Woodford, on Friday night the route lay through St. Albans, Daventry, Tamworth, and Welshpool to Bala, returning through Llangollen to Welshpool, thence up Long Mountain, a detour of 5½ miles, when the road covered on the outward journey was rejoined and followed back to Dunstable.

Although twenty-four cars were entered the motor cycle entry was disappointing, only five solos, three sidecars, and three three-wheelers participating.

There were two non-stop sections, that on the outward run being Dinas Mawddy to the summit of Bwlch-y-Groes, the last mile of which was timed, a cup being presented in each class to the competitor whose time over this mile was nearest to 15 m.p.h. E. A. Marks (349 A.J.S.) made a good climb, although he had suffered lamp troubles during the night. W. A. Newell (490 Norton) failed on the hairpin, and W. H. Norris (698 Raleigh) came to rest with his rear wheel spinning in the grease just after negotiating the corner.

The Pass Still Difficult.

W. P. Browning (799 A.J.S. sc.) came to rest just before the corner and was baulked by a car further up the hill. H. E. K. Sawtell (1,098 Morgan) made a good climb, but S. W. Dame (1,098 Morgan) failed, and after nearly running over the precipice he baulked several cars. S. Biss (1,098 Coventry-Premier three-wheeler) was most unfortunate, for after breaking a spring near Tamworth he punctured on the hill and then burnt out his clutch.

After breakfast at Bala the second non-stop section was up Long Mountain, about three miles after leaving Welshpool on the return journey. The surface was quite dry, though rough and rutty. W. P. Browning (799 A.J.S. sc.) came to rest by the bottom corner owing, we understand, to an air-lock in his petrol pipe, and W. A. Newell (490 Norton) fell off near the same spot. E. A. Marks (348 A.J.S.), W. H. Norris (698 Raleigh), W. P. Browning (799 A.J.S. sc.), H. W. Glendinning (976 Zenith sc.), S. W. Dame (1098 Morgan), and H. E. K. Sawtell (1098 Morgan) checked in at the finish at Dunstable.

RENOVATING AN OLD ENGINE.

How an Amateur Mechanic Rebushed and Rebalanced a 1916 A.J.S. twin.

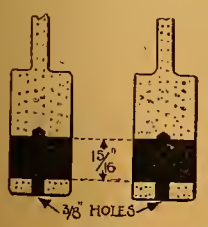
THE rebushing and general overhaul of a motor cycle engine is by no means such a difficult affair as is often supposed, and, while ordinary care is, of course, essential, there is little in these operations beyond the power of the average amateur, provided he has access to a lathe. The writer at any rate does not claim to be an expert mechanic, and was, nevertheless, very successful in the renovation of his 1916 A.J.S. twin.

Work Scarcely Necessary.

Engines of the type mentioned had plain bearings throughout; and although the writer's specimen was running at the top of its form, it was expected, as it had over 12,000 miles to its credit, that some at least of the bushes would be showing signs of wear. The engine was therefore taken out of the frame and entirely dismantled. The only difficulty here was the unscrewing of the nuts which hold the crank pin in the flywheels, but after gentle persuasion with hammer and punch they came loose and the flywheels were taken apart. An examination of the various bearings showed that, as was to be expected, the big-end bushes had developed most play. Even they were not very bad, for, although there was a great deal of side shake, up and down movement was barely perceptible. The main bearings and small end bushes were very free, but could hardly be described as badly worn. It was decided, however, to renew them all. The crank pin, being slightly oval, was sent away to be reground, but the main shafts were not touched.

Making and Fitting Bushes.

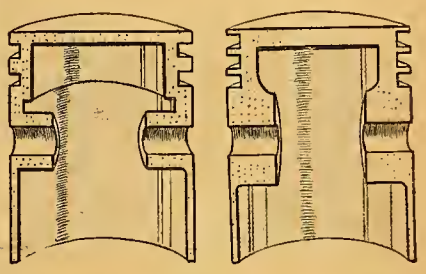
The old bushes were first driven out—this requires care, particularly in the case of the crank case—and new ones turned to a good fit on their respective housings. For the big-ends a specially hard piece of phosphor bronze was used; Muntz metal was employed for the main shaft bushes, and the small-end bushes were purchased from the local A.J.S. agent. Though the big-end bushes were an easy enough fit on the crank pin before they were forced into the ends of the connecting rods, after this had been done they refused to go on at all, owing to the pressure of the surrounding metal reducing the diameter of the bush. This necessitated careful lapping in with metal polish before a good working fit was obtained. The main shaft bearings were similarly affected, though to a smaller degree.



Method of fixing balance weights in the flywheel.

The next operation was the assembling of the flywheels. The truing up was done between centres in a lathe, and proved much easier than was anticipated. After the crank pin nuts had been screwed home, the flywheels were again put between centres to make sure that nothing had shifted.

The cylinders were next taken in hand. At the outset it had been realised that the truing up of these and fitting with new pistons was a specialist's job, and accordingly they were entrusted to a local firm which was instructed to fit the new pistons with three rings, as it was suspected that the rather excessive oil consumption of the engine might be due to oil getting past the two rings with which the 1916 type of piston was fitted. The cylinder bore was ground out from 74 mm. to 74.5 mm. Unfortunately, A.J.S. castings were not obtained for the pistons, and these turned out much too heavy—7½ oz. each to be exact. Although this difference of nearly 1 lb. in the reciprocating weight was bound to affect the balance, it was decided to try the engine on the road before anything was done; and it was therefore assembled.



Neglecting to procure a proper casting resulted in the new piston (right) being too heavy.

Here a slight hitch occurred. The writer, in his anxiety to have everything a good working fit, had left the bushes a trifle on the tight side, and the effect of this in conjunction with the new pistons was that only by jumping vigorously on the kick-starter could the engine be persuaded to move at all. Starting by this means was evidently out of the question. After much cogitation the services of a sporting friend were requisitioned, and the whole outfit (with the writer in the saddle) was shoved vigorously down a slight hill and the engine after being started was run gently for some time with copious lubrication.

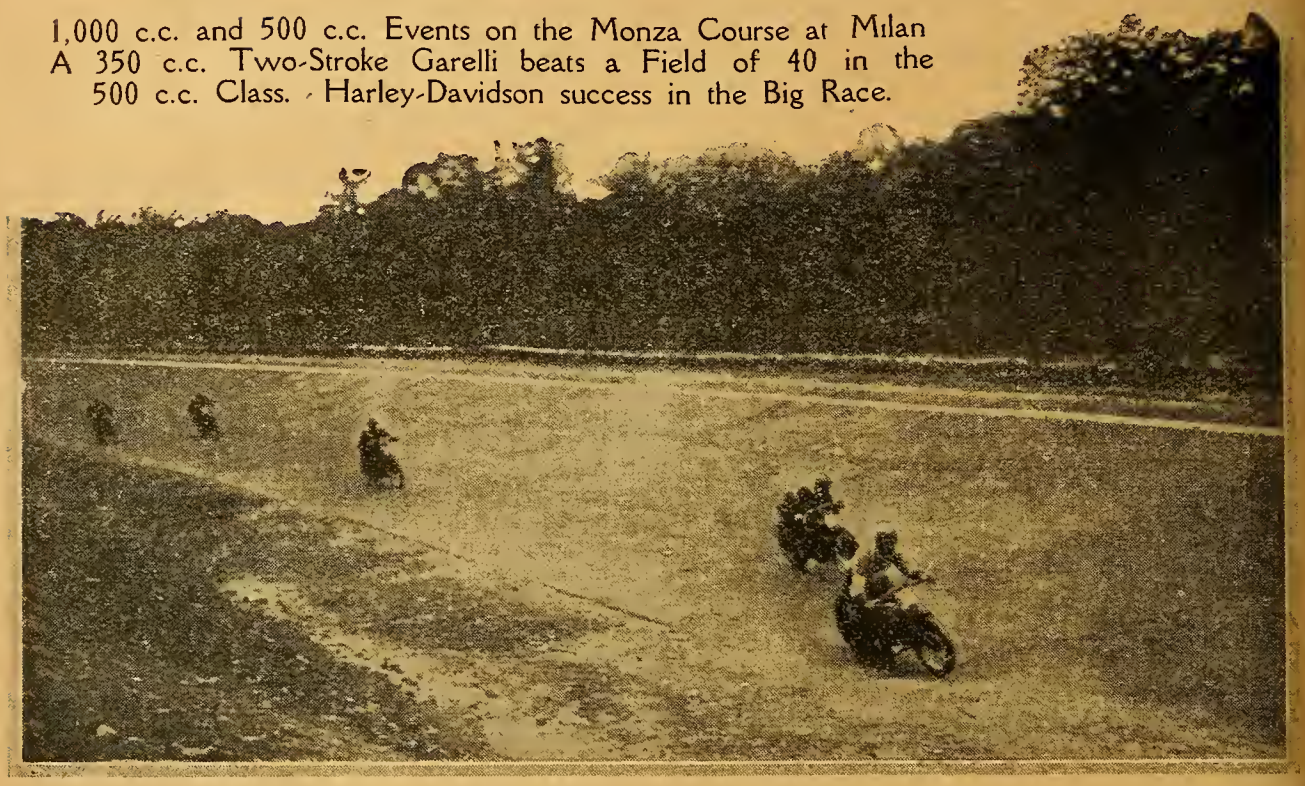
Adjusting the Balance.

There was no very noticeable vibration when on the road, but a slight harshness showed in the running. The pistons therefore were lightened by removing metal internally and drilling the skirts, but they were still 4 ozs. each overweight. Back numbers of *The Motor Cycle* were then consulted, and an article on "The Balance of Motor Cycle Engines" was found in the issue of February 3rd, 1921. Working on the lines therein laid down a test was made, and it was found that additional weight opposite the crank pin was required, to the amount of 12.5 oz. at a distance from the centre of 43.5 mm. This suggests that possibly the engine was originally slightly underbalanced. It was decided to add the weight at a distance of 79 mm. from the centre, and two $\frac{15}{16}$in. holes were bored right through both flywheels, with $\frac{3}{8}$in. holes at right angles to keep the weights from shifting. By filling these with lead the weight was increased by about 7¾ oz.

On reassembling and running on the road, a big improvement was evident, particularly in steadiness and smoothness of running. I. C.

FIRST RACES ON ITALY'S NEW TRACK.

1,000 c.c. and 500 c.c. Events on the Monza Course at Milan
A 350 c.c. Two-Stroke Garelli beats a Field of 40 in the 500 c.c. Class. Harley-Davidson success in the Big Race.



Competitors in the 500 c.c. class at speed on a fast portion of the track.

ON Friday last the first motor cycle races took place on the new Italian track in the royal park of Monza, near Milan.

The track was described and illustrated in our issue of September 7th, and has a circuit of 10 kilometres (6¾ miles).

Two events were run. The first, for 1,000 c.c. machines, was held in the morning over forty laps of the course (248½ miles), and in the afternoon there was another race over the same distance for 500 c.c. machines.

The 1,000 c.c. race was won by the Italian rider Ruggeri, on a Harley-Davidson, in 3h. 50m. 3s., or at an average speed of 64.8 miles an hour. The 500 c.c. race was won by Gnesa, on a Garelli, in a total time of 3h. 57m. 23s., or 63½ miles an hour.

Start of the 500 c.c. class. Douglases, a Triumph, and a Norton are among the machines on the first line.

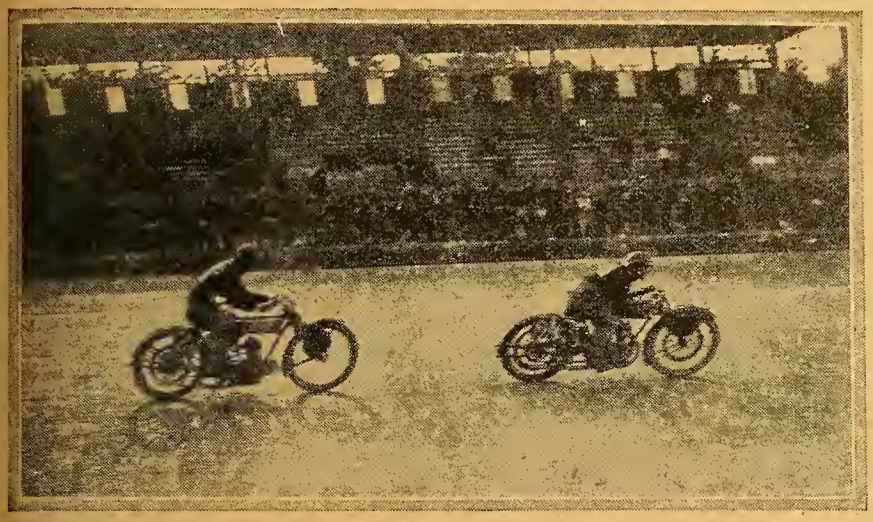
The Italian track is quite different, both in its nature and its environment, from anything existing elsewhere. The club responsible for the venture has been very fortunate in getting possession of a richly-wooded former Royal park, quite close to Milan, and in it has built a speedway which unites track and road conditions.

Well Designed Track.

To get the biggest track in the smallest area, the Monza speedway has been laid out with a small oval inside a bigger, roughly shaped oval track, there being one point where one track passes under the other, and in front of the main stands the inner and the outer tracks are parallel.

From the grand stands the spectators have immediately in front of them two parallel tracks, divided only by a white line with inverted V checker boards at intervals, while about 150 yards away is a third parallel track, the whole of the inner curve, the half of an outer curve, and a portion of another curve.

On the Monza track the competitors are not in view the whole time, but pass three times per lap. The periodical disappearance of the competitors tends to keep up interest in the race, and as they come into view three times every six miles



British machines passing the grand stand. Sunbeam and Norton riders keeping well together.

there are few dull moments, even with a small field of competitors.

An advantage which the Monza possesses over all other tracks is the arrangement of roads and bridges, allowing the spectators to move from point to point while a race is in progress. Because of thick woods, all idea of an artificial track is lost when once the grand stands have been left behind. With the Alps as a background, the setting is delightfully attractive.

Nineteen 1,000 c.c. Starters.

In the 1,000 c.c. class 19 machines were sent away in a group at 8 a.m. The makes were Excelsior, Harley-Davidson, Indian, one Humber, and the Italian Gallonis and S.A.R.'s. All the riders were Italians.

The race was a struggle from beginning to end among the Harley-Davidson men, who numbered ten out of the nineteen starters. Although the leader changed, it was always a Harley-Davidson which led the field, and the fastest lap was made by Winckler, one of the members of this team, at an average of 74½ m.p.h.

First Four of One Make.

At half-distance the leader was Rogai, followed by Ruggeri, Contarini, and Faraglia, all on Harley-Davidson. The latter half of the race was keenly contested, and brought about changes, the final result being as follows :—

1. Ruggeri (Harley-Davidson) .. 3h. 50m. 3⅕s.
2. Contarini (Harley-Davidson) 3h. 53m. 3⅕s.
3. Faraglia (Harley-Davidson) .. 3h. 58m. 8⅕s.
4. Winckler (Harley-Davidson) .. 4h. 17m. 12⅕s.
5. Rava (Indian) .. .. .. 4h. 27m. 12⅕s.

Winner's speed, 64¾ m.p.h.

Group Start of Forty Machines.

In the afternoon race a magnificent grouped start was made by the forty 500 c.c. machines of British, French, Italian, and Belgian makes. A special class was not provided for the 350 c.c. mounts, and among those starting with the handicap of a small piston displacement were the Garellis, which won at Strasbourg. Although British makes were well represented by Triumph, Douglas, New Hudson, Sunbeam, Norton, and N.U.T., the only British riders were Edmond and Brandish, on Triumphs. One of the French A.B.C.'s was ridden by Bartlett, an Englishman residing in France.

British Lead in Early Stages.

Two Triumphs, ridden by Brandish and Opessi, and a Douglas mounted by Fieschi, took the lead at the outset, hard pressed by the A.B.C. trio. The end of the fifth lap saw Brandish in the lead, with Opessi on another Triumph second, and Fieschi on a Douglas third.

The first hundred kilometres (62 miles) were covered by Brandish in 56m. 53s., with Fieschi on a Douglas only one-fifth of a second behind him. Then came Opessi (Triumph), followed by the two French A.B.C.'s ridden by Naas and Bartlett.

Flat Twin takes the Lead.

At this distance Edmond (Triumph), who had been among the first half-dozen, went out with magneto trouble. Fieschi's Douglas got into the lead after fifteen laps, followed closely by the French champion, Naas (A.B.C.) and by Brandish and Opessi (Triumphs).

Naas, who appeared to have been taking things easy, jumped into action at this point and took the lead away from the Douglas. After twenty laps, half distance, he had a lead of almost two minutes, and as Opessi's Triumph had dropped out with magneto trouble, Brandish got second place, with the Douglas third, and a couple of Italian machines, the Guzzi and Garelli, fourth and fifth.

Anglo-French Duel.

There was a particularly fine duel between Naas and Brandish. The Frenchman kept in the lead for nearly fifty miles, but the Englishman gradually crept up to him and got the lead after thirty laps. Just when excitement was running high Naas broke the frame of his machine. He fastened it up with straps and covered five more laps, losing ground to Brandish all the time. Declaring that it was really too dangerous, Naas came to the pits and announced his intention of retiring. Hardly had his A.B.C. been lifted off the track than Brandish, the last of the Triumph team, had to drop out of the race with a broken tappet.

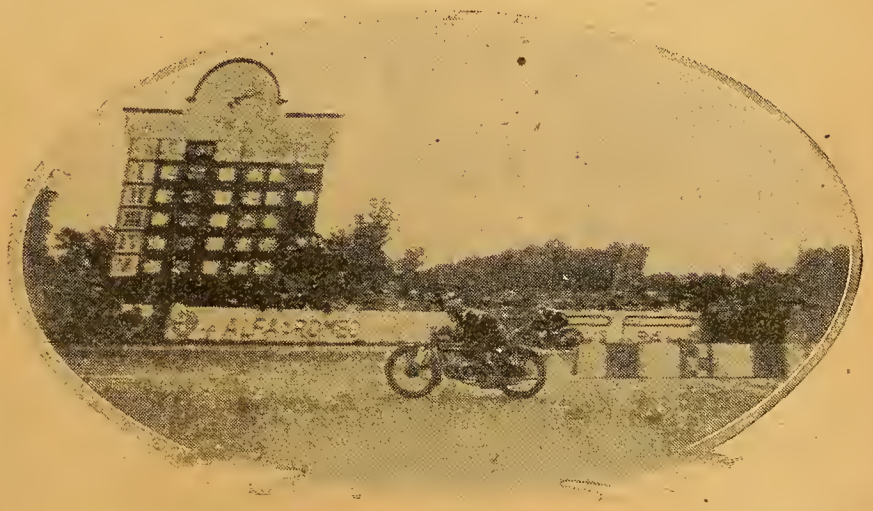
Great Excitement.

These incidents caused wild excitement among the spectators, for they placed a 350 c.c. two-stroke Garelli, ridden by Gnesa, in the lead with Fieschi's Douglas second. The rider of the English machine did his best, but each lap he lost about 20 yards to the two-stroke Garelli, the rider of which won the Italian Motor Cycle Grand Prix by covering 248½ miles in 3h. 57m. 23s., equal to an average of 63.5 miles an hour. The final result was :

1. Gnesa 349 Garelli) .. .. .. 3h. 57m. 23s.
2. Fieschi (494 Douglas) .. .. 3b. 58m. 12s.
3. Morabito (492 Sunbeam).. .. 4h. 2m. 11s.
4. Maffeis (499 Maffeis) .. .. 4h. 6m. 5s.
5. Fergnani (349 Garelli) .. .. 4h. 6m. 34s.

Winner's speed, 63½ m.p.h.

Out of the forty starters only three other machines were running when the race was called off. For the afternoon race the weather was fine but dull. A little rain fell during the morning race.



A Douglas rider passing the huge scoring board which recorded lap by lap the numbers of the foremost competitors.

AN IRISH ROAD RACE.

Spectacular Event over a 4¾ Mile Course, Won by J. W. Shaw (490 Norton).

ON the first Saturday in September a 51½ mile road race was held by the North Down M.C.C. at Clandeboye, in Co. Down.

It was the biggest event of its kind ever held in Ireland; in fact, it is hoped that it marks the approach of the much-discussed Irish T.T. race.

Prizes ranged from 1 to 10 guineas, and there was a special prize for the rider of the fastest standard machine to complete the course. Perhaps this last-mentioned honour influenced J. W. Shaw—the winner—to appear on his side-valve Norton.

The course, which had to be covered eleven times, was of a rectangular natnre, containing one right-angled and three acute corners, while the sides were hilly and by no means straight.

There were 34 entries, and nearly all the well-known makes were represented.

The passing of machines was continuous, so that interest never ebbed, but the 4¾ odd miles of the course were rather congested, as sometimes three or four riders arrived at the corners together.

Although there were no serious accidents, some riders were down as often as three times, and quite a few riders and machines showed signs of ugly falls, but they all pluckily carried on.

Two of Ireland's premier speedmen. J. W. Shaw (490 Norton) following up H. Chambers (349 A.J.S.) in the Irish road race at Clandeboye, Co. Downe.

"Jimmy" Shaw (490 Norton), completed the 51½ miles in 56m. 10s., and made the fastest lap time of 4m. 56s., a speed of over 61 miles per hour. His average speed for the whole course was 55.6 m.p.h.

Harry McGimpsey was second on a 349 c.c. New Imperial, the fastest in his class to finish; his time was 67m.

Both the foregoing riders gave beautiful exhibitons of cornering. Shaw, in his fastest lap, held the spectators spellbound.

The following are the official times of the first four riders to finish :—

	Gross Time.	Handi. Nett cap. Time.
	m. s.	m. m. s.
J. Shaw (490 Norton) ...	75 10 ...	19=56 10
H. McGimpsey (349 New Imperial)	77 0 ...	10=67 0
F. Hamilton (490 Norton)	78 15 ...	14=64 15
J. Thompson (499 Sunbeam)	78 50 ...	15=63 50

CLUB NEWS (continued from p. 379)

North London M.C.C.

On Monday of last week the club held a very successful social at the headquarters, The Gate House, Highgate.

South Midland Centre A.C.U.

On September 23rd Kop Hill will once again be the scene of an important speed event, open to members of any club in the Centre. A big entry is anticipated, arrangements being in the hands of Mr. W. H. Hardman, Westcott, Northaw, Potter's Bar.

Neath and District M.C.

Final speed trials of the year will be held in Margam Park on Saturday, September 23rd, at 2.30 p.m. (postponed from September 2nd).

Surbiton M.C.

Motor cycles, three-wheelers, and cars of any capacity will compete in the one-day reliability trial for the Sopwith Challenge Cup and other awards on Saturday. The start will be made from the Talbot Hotel, Ripley, at 10 a.m. over a secret route.

Macclesfield and District M.C.

Particulars of the hill-climb to be held on the 23rd inst. may be obtained from Mr. T. Sinister, Jordangate, Macclesfield.

North Liverpool M.C.

At Southport Sands on October 7th the club will hold its first speed trials. Particulars may be obtained from Mr. F. E. Marsden, 258, Walton Rd., Liverpool.

Sheffield M.C.C.

Resnlts of a trial for the S.M.C.C. Trophy, run on September 3rd over a 70-mile course, were as follows: 1, H. Oscroft (976 Enfield sc.), with a total loss of 5 marks; H. Bennett (770 Hazlewood sc.) and J. Cox (976 Matchless sc.) tied for second and third place with a total loss of 11 marks each.

Dundee and Montrose M.C.C.

Speed trials were run off over Lewan Sands, Montrose, in delightful weather on Saturday, the 2nd inst., and some good times were recorded. Each class was a separate race.

350 c.c. (Two Laps; 1 Mile).—1, C. K. Ferres (349 Massey-Arran); 2, R. Scott (349 A.J.S.); 3, A. Lamond (349 A.J.S.); winner's time=1m. 32⅖s.

350 c.c. (12 Laps; 6 Miles).—1, G. K. Ferres (349 Massey-Arran), 10m. 34⅘s.; 2, R. Scott (349 A.J.S.); 3, A. Lamond (349 A.J.S.).

650 c.c. (2 Laps).—1, A. Brown (490 Norton), 1m. 30s.; 2, G. K. Ferres (349 Massey-Arran); 3, J. Adamson (490 Norton).

650 c.c. (12 Laps).—1, J. Adamson (490 Norton), 9m. 55s.; 2, A. Brown (490 Norton); 3, G. Stuart (490 Norton).

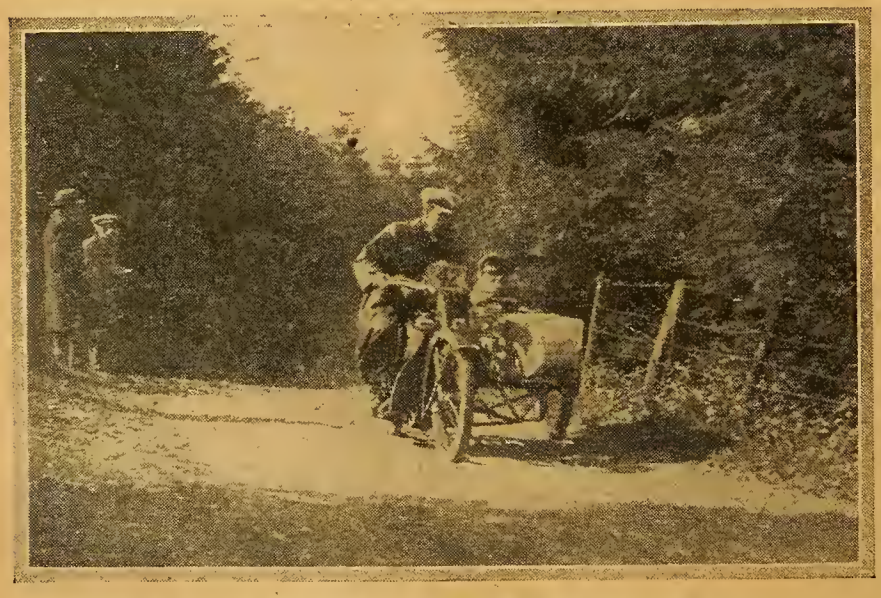
1,000 c.c. (2 Laps).—1, D. M'Lean (976 M. and S.), 1m. 29s.; 2, J. Adamson (490 Norton); 3, A. Brown (490 Norton).

1,000 c.c. (12 Laps).—1 J. Adamson (490 Norton), 10m. 14s.; 2, G K Ferres (349 Massey-Arran); 3, A. Brown (490 Norton).

The inter-club team race was won by the Dundee Club team, consisting of J. Adamson, G. Stuart, and D. M'Leau, and results of the 4-lap race for the Club Championship were as follows:—

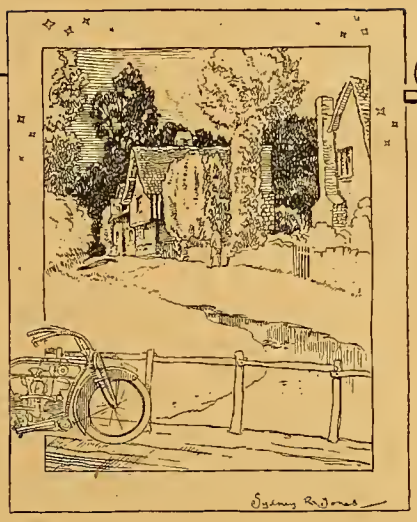
1, A. Brown (490 Norton), 3m 30s.; 2, J. Edwards (499 Sunbeam); 3, G. K Ferres (349 Massey-Arran).

The Rudge Cup for the competitor making the fastest time of the day was awarded to G. M'Leau, who led the unlimited class.



W. H. Clough on a Scott, fitted with a newly designed three-speed gear, making a good ascent of Boltby Bank in the Yorkshire Centre Team Trial on Saturday.

QUESTIONS & REPLIES



A Selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

MEASUREMENT OF GRADIENTS.

[?] Is a hill with an incline of 45° a gradient of 1 in 1 or is it, as I contend, a gradient of one in the distance traversed on the actual surface of the road during one foot of rise? In other words, is it height gained in a given length of road or in a given horizontal distance?—T.B.D.

The incline referred to is 1 in 1, but although not strictly correct, the gradients of hills are frequently expressed in terms of one foot rise in a distance measured actually along the surface of the road and not along a horizontal base line. Road gradients steeper than one in six are the exception rather than the rule, and it is only when this degree of steepness is exceeded that any serious discrepancy occurs when the surface distance and not the horizontal distance is taken.

OLD TYPE METAL PLATE CLUTCH.

[?] (1) When I gently put in the clutch of my 557 c.c. 1920 B.S.A. in order to move away it makes a very loud grinding noise. I have tried adjustments both on the gear box and on the rod; also cleaning out with paraffin and re-oiling, but without a cure. (I use B.S.A. gear box oil only). (2) Do you think the gear box will have to be taken to pieces, and is it too big a job for me to attempt? The grinding noise is the only trouble, the clutch otherwise being perfect.—F.G.

The clutch of the 1920 B.S.A. machine was rather small in area for the load it had to transmit, and, in consequence, the spring pressure is necessarily very strong; a certain amount of noise is frequently associated with the engagement of this clutch, and providing it functions correctly we do not think you need trouble to dismantle the gear box. Some improvement might be effected in the more delicate engagement of the clutch by fitting a handle-bar control. It is possible to dismantle the clutch without special tools, but it is rather difficult unless you have seen it done previously by a mechanic who is familiar with this piece of mechanism.

Important Dates.

Sat., Sept. 16th—The Scott Trial.

Sat., Sept. 16, and Mon., Sept. 18.—Scottish Two-Days Trial.

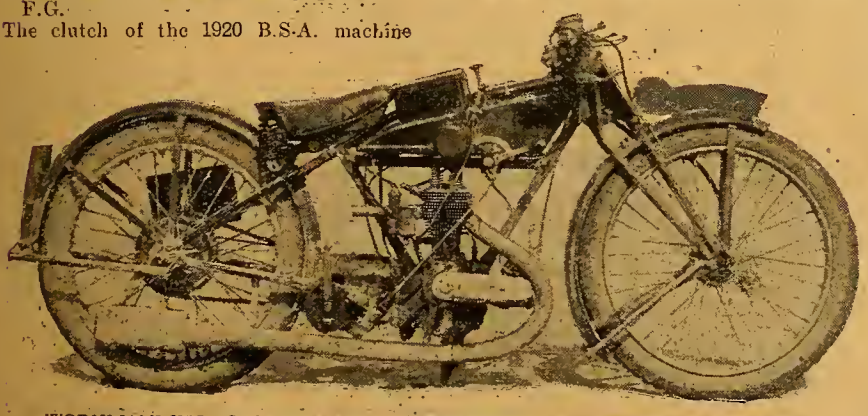
Sat., Sept. 30th.—M.C.C. Sporting Trial.

Wed., Oct. 4th, to Sun., Oct. 15.—Paris Salon.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd—Olympia Motor Cycle Show.



WORKMANLIKE SPORTING LIGHTWEIGHT. It is inevitable that machines embodying standard components should all look very much alike, and for this reason the new Grindley, which made quite a creditable *debut* in the Six Days Trials, deserves praise for its air of distinction. This latter attribute is gained by the large tyres (28×3 in.) fitted, and by the neat frame design. With a 249 c.c. sports J.A.P. engine, Burman two-speed gear box and chain drive, the price is £75. (The Grindley Motor Co., Prees, Salop.)

OVER RICH MIXTURE.

[?] I have a T.D.C. two-stroke and having lately taken off the cylinder and replaced it I find that it does not go at all satisfactorily. When running to start nothing takes place until I release the compression; when an explosion occurs it will then go for a few yards and then stops, until I release the compression again. When the machine is running, the only way to keep it going is to release the compression constantly. Everything else appears to be in good order; the engine is airtight and there is a good spark. What do you think is the cause of this behaviour? I do not think I have increased the compression ratio, as I have put quite as much packing between cylinder and crank case as there was before.—N.P.

The particulars you give us are not sufficiently clear and detailed to enable a conclusive answer to be given. We think, however, that the trouble is caused by an excessively rich mixture. Black smoke from the exhaust or a fine sooty deposit on the sparking plug would indicate the condition. In such a case as yours it is almost impossible to say definitely what is amiss without seeing the machine, and we can only advise you to check over every item point by point, making sure that all is in order. The help of such a handbook as "Two-stroke Motor Cycles" would be an advantage to you in doing this.

LOOSENING TRIUMPH SPROCKET NUT.

[?] (1.) How can I take off my W.D. Triumph engine sprocket and small half of countershaft chain-guard nearest the engine? (2.) What methods are usually employed to prevent the engine flywheels rotating while loosening the nut on the end of the engine-shaft?—J.L.

(1.) The chain sprocket on the W.D. Triumph engine is of the self-withdrawing type; that is to say, as the nut is unscrewed the sprocket comes away from the engine-shaft. (2.) It is not usually necessary to employ any special method of holding the flywheels while the sprocket nut is being loosened, if the engine is

first rotated until the piston is up against compression. A sharp tapping of the spanner with a hammer is usually quite sufficient to loosen the engine-shaft nut. If this is not effective, however, put in the low gear and get a friend to hold the back wheel while you hammer round the spanner.

SUITABLE TOP GEAR FOR SIDECAR

I am fitting up a 976 c.c. Clyno-Jap machine and would like to know what size the engine-shaft sprocket should be for sidecar work. The rear sprocket is of 47 teeth, gear box 15 teeth, and clutch 30 teeth.—J.H.

We would recommend a top gear ratio of about 5 to 1, and with the sprockets which you enumerate you would need one of 19 teeth on the engine-shaft.

READERS' REPLIES.

WORN BEARINGS.

With reference to "J.E.W.'s" query as to the rattle he experiences on his machine, I may say that I have exactly the same trouble with my 499 c.c. Sunbeam. I have done 18,000 miles, and on getting up speed on the level or slightly down hill a peculiar rattle appears. This I have found, after exhaustive searching, to be piston slap. This has got no worse during the last six thousand miles, and is not objectionable if plenty of oil is given.—S.T.B.

REMOVING B.S.A. BELT RIM.

If "H.D." fastens two stout pegs, or, say, chisel heads in a strong vice, removes lock ring, places belt rim spokes over the pegs in the vice and then gets someone to give a hand with the unscrewing (gripping tyre and not forgetting left-hand thread) he should be able to remove his belt rim. In the event of failure heat with a blow lamp and try again. Perhaps "H.D." would prefer to repair his rim, as they are rather dear—I have just paid £2 5s. 6d. for one. It is quite easy to patch a cracked rim with one or more pieces of soft material bent to shape. One rivet on each side of the U-shaped patch will do, but both sides of each hole must be countersunk. The inside countersink is to draw the rim down and keep rivet head clear of belt. I have run thousands of miles on one I repaired.—P.H.D.

[The method of removing must be adopted with care, it being remembered that the spokes are tubular and (comparatively) easily damaged.—ED.]

A TWO-STROKE RATTLE.

To add yet another opinion to the two-stroke controversy, I have found that a rattle in my Villiers engine appeared to be caused by endplay in the crankshaft. Anyone who has watched a "balanced" electric motor running will know that endplay can cause a considerable amount of hammering on bearings. This is damped out under load possibly owing to greater friction, or possibly to damping action of eddy currents. When I took the crank case apart of my relatively unbalanced engine, I turned off a small portion of the crank case on each side to make the shaft a tight fit, and then inserted a paper washer to suit. The rattle has now disappeared.

Also, have your correspondents tried a plug which is not designed for a two-stroke, the Lodge "Aero B," mica-insulated. I have been using one for five months now, which was discarded by a car owner. It has never given any trouble. Also a friend of mine has had one in his Villiers engine for two years. Between us we have about thirty plugs discarded as second-raters.—K.C. 1960.

[Thin packing washers on the crankshaft would stop endplay with less trouble.—ED.]

LAMP ON SIDECAR.

[Several readers have pointed out that our reply to "H.C." under the above heading in the issue of Angnst 31st does not now apply. We regret that as a result of long usage we quoted the now defunct D.O.R.A. regulation. At the same time there may be local byelaws in operation in various places which affect the matter, and we would like to have any information if such exist.—ED.]

A West country reader obtained the following clear statement of the law on motor cycle lighting from the chief constable of his district:—

"In the case of a motor bicycle with sidecar attached, a lamp is required showing a white light in front, which need not be on the extreme off side. A red light must be shown to the rear, and this may be attached to either the sidecar or the bicycle. If, however, the sidecar projects from the off side, then the lamp showing a white light in front is required to be attached to the extreme off side of the sidecar, and in such case it must show a red light in the reverse direction, unless a separate rear red lamp is carried. These lights are required between one hour after sunset and one hour before sunrise.

"Either the front or rear identification plate must be illuminated between half an hour after sunset and half an hour before sunrise, except that in the case of a motor cycle of a weight unladen exceeding 3 cwt. the rear identification plate must be illuminated."

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"A.B.C." (Chester).—596 c.c. Indian Scout: reliability, speed.

"C. W." (Lutterworth).—998 c.c. Indian or 989 c.c. Harley-Davidson sidecars.

"R.C.S." (Hull).—499 c.c. Rudge Multi, I.O.M.: suitable touring carburetter, hints on tuning for speed.

"W.E.S." (Liverpool).—398 c.c. Royal Enfield: suitability for light sidecar.

"W.R.C." (Knaphill). — Suitable machine for 12-mile daily journey (normal country). Reliability before speed.

A Good Record.

Three team prizes and fifteen gold medals were won by machines fitted with E.I.C. magnetos in the Six Days Trials.

Found on the Road.

By Mr. A. Sharvell Cullwick, The Beeches, 74, Tettenhall Road, Wolverhampton: A pair of waterproof overalls at Newquay, on August 24th.

Collision Causes Retirement.

V. F. Long, who entered a 976 c.c. Excelsior for the Six Days Trial, was forced to retire owing to a collision with a cart which seriously damaged his machine.

A Removal.

In future the head offices and sales department of the Eynsford Engineering Co., manufacturers of the Economic motor cycle, will be at Primrose Works, Eynsford, Kent.

The Plugs Pullin Used.

In our account of the double-twelve hour records set up at Brooklands on September 1st by C. G. Pullin, it was stated that his Douglas was equipped with Lodge plugs. We are now advised by the makers of the K.L.G. sparking plug that their products were employed.

Catalogues Received.

T. C. Jones and Co., Ltd., 93-95, Wood Lane, Shepherds Bush, London, W.12: A catalogue listing small tools of every description.

The Goodyear Tyre and Rubber Co. (Great Britain), Ltd., 162, Shaftesbury Avenue, London, W.C.2: Leaflet giving the most recent prices of Goodyear motor cycle tyres.

The Watsonian Folding Sidecar Co., Ltd., Conybere Street, Birmingham: Stocktaking leaflet of sidecars and components, which are being cleared at low prices.

Sir,—It would certainly appear that some person, or persons, antagonistic to motor cycles and motor cyclists, and having influence in the right quarter, has been working to banish the motor cyclist from Brooklands track.

One is asked to believe that it is the noise of motor cycle exhausts, as distinct from that of racing cars, which is particularly offensive to certain residents in the vicinity of the track. That this is a gross piece of bluff is obvious to the meanest intelligence, and is disgusting to anybody having the most elementary sense of fair play.

I have personally been in the paddock when a certain racing car of foreign manufacture was started up, completely drowning the sound of the exhaust of several motor cycle engines which were running at the time. One of these happened to be my own, and I had a few minutes previously been informed by a B.A.R.C. official that my machine was too noisy. Needless to say, there was no question of the barest suggestion that any noise was being made by the juggernaut with a German engine which was bellowing in our midst.

Incidentally, I had that day, and have before and since, ridden my machine in exactly the same condition on my way to the track, through Aldershot and Guildford amongst other places, without the slightest comment from the police.

Are we really expected to go on believing this cock-and-bull story about the astonishing discrimination between sounds possessed by the residents around Brooklands track, or are we going to hear the truth of the matter—or are the vested interests concerned too sacred or expensive to be disturbed by mere fairplay!

Is it not possible that complaints have been made about noise in general proceeding from the track, and that the motor cyclist as the smaller was the easier man to hit?

The thing certainly becomes crudely blatant in its latest development—the running of the 200 miles light car race, and the cancellation of the 500 miles motor cycle race.

Incidentally, with reference to these local residents, if they are people who have lived in the neighbourhood since before the track was constructed, they have been strangely forbearing in suffering in silence all these years—not murmuring until now. If they are residents recently arrived in the locality—well, the track was there first. XF 573.

Aldershot.

Sir,—We are extremely surprised at this late date to receive a notification of the abandonment of the 500 Miles Race, and consider that the matter is sufficiently serious for the intending competitors to get together and endeavour to save the situation even at the eleventh hour.

It appears almost incredible that about five local residents should be in a position to hold up the whole motor industry and cause the wastage of, at an estimate, somewhere between £20,000 and £40,000 of the trade's money, without giving the trade any opportunity to submit a scheme for making the competing machines reasonably silent. In fact, we understand that the point has been put to the complainants' solicitors, who refused even to discuss the matter.

The 500 Mile Race is, to our mind, the most important racing event of the year, and we believe that next year the public would have given it precedence over the T.T. races, on the ground that in the T.T. the man counts for more than the machine, whilst the 500 Mile Race is almost entirely a test of the machine. Any rider who is sufficiently skilled to keep a machine on Brooklands [illegible] speed has an equal chance with a crack rider of securing the prize.

It appears to us to be one of those occasions calling for a little sportsmanship and commonsense.

It would appear to the non-legal mind that when the present proceedings, the outcome of the 200 Mile Light Car Race, come before the courts, the fact that the competitors are willing to silence cars and cycles to the extent that the noise from the track would be no greater than the ordinary noise of passing traffic on the roads, will put the complainants in a very weak position, and it should surely be possible for the complainants' solicitors to give one of those concessions (with an unnecessary Latin name) for the race to be held subject to the machines passing, immediately before the race, a standard of silence test set by the R.A.C. Engineer and defined well in advance of the actual date, so that there will be no excuse for competitors arriving with machines which would not pass the test.

We have been experimenting with and have evolved a particularly efficient silencer for our "Quick Six" machines which does not involve the fitting of an expansion box nor create any back pressure, and which does make our "Quick Six" machines quiet. We should be only too pleased to submit this device as a standard of silence, and to supply all competitors with similar silencers suitable for their individual machines at cost price. All machines would then be under the same disadvantage, if any.

We trust that very active steps will be taken in this matter, and that when the full circumstances are available to the public it will be found that the B.M.C.R.C., A.C.U., and B.A.R.C. have used every endeavour and adopted a bold policy.

GEO. TILGHMAN-RICHARDS,

Martinsyde, Ltd.

COLD FEET.

Sir,—May I suggest a new item of comfort for winter riding? Each foot-board may be replaced by a hot-water box a few inches deep, with the usual fastening brackets underneath. The upper surface of the water box will serve as foot-plate and should be about six inches wide. A filler and drain tap can be fitted so as not to interfere with foot-operated brakes. Perhaps some manufacturer will produce this winter need at a reasonable cost, and before the cold weather is upon us. "BUN-DOOLA."

London.

FOREIGN TYRES ON BRITISH MACHINES.

Sir,—One at least of our important manufacturers fits a foreign magneto as standard. Such an action is reasonable, as the magneto may outlast the cycle, and a manufacturer who does not fit the best, in his opinion, is being false to his company. But why fit foreign tyres? The best tyres of to-day are all nearly alike in service. Why then force a buyer to import goods in these days of unemployment, the tyre being only a "transient phenomenon," replaceable after 10,000 miles, more or less, at the same cost as the one fitted as standard? K.C. 1960.

Watford.

SUMMARY OF CORRESPONDENCE.

Mr. W. A. Warwick would be glad if the owner of a Premier, to whom he lent a foot pump recently on the London-Bristol road, would return it to him at 54, Howitt Road, Belsize Park, N.W.

The Delancey Motor Garage, of Camden Town, N.W., write with reference to the incorrect dating of second-hand machines, and advise all purchasers of such machines to insist on the advertised date being stated on the receipt of the transaction.

The owner of a New Imperial and sidecar pays high tribute to the Sandum windscreen. As the result of an accident, the outfit turned a complete somersault, but thanks to the strength of the windscreen and the nature of its construction, the occupant of the sidecar was scarcely hurt.

,,	16th	.. ..	7.43 ,,
,,	18th	.. ..	7.38 ,,
,,	20th	.. ..	7.34 ,,

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

The Paris Show.

October 4th to 15th (inclusive) is the period during which the Paris Show will be open.

Olympia Extensions.

Despite every effort to complete the new wing of Olympia for this year's Motor Show, it was decided last week that the extensions could not be completed in time. The car show, therefore, will be divided between Olympia and the White City.

Race Track for Derby.

A new track is under consideration at Derby, in which the chief person interested is Mr. C. A. Clews, borough surveyor to that town. Professor A. M. Low is being employed as consulting engineer, and we understand that the banking will be made suitable for motor cycle racing, and perhaps also to accommodate light cars.

Silence is Golden.

Both in Leicester and Birmingham courts riders of machines fitted with Villiers engines have been summoned for inefficient silencers. The manufacturers defended the cases, and defendants in both instances were dismissed, the authorities expressing themselves satisfied that there was no cause for complaint.

Silencer Test Case.

In our last week's issue appeared an account of a silencer test by means of Professor Low's audiometer for the purpose of obtaining evidence on behalf of a motor cyclist whose machine, in the opinion of the police, was not properly silenced. The A.C.U. advises that the hearing of the case has been adjourned until the 25th inst.

Silence Danger Zones.

This week's batch of warnings against police activity, incidentally all in the matter of noise, indicate that particular caution is required in Putney High Street, in the Potteries (particularly Trentham), in Northallerton, and around Coventry, Birmingham, and Wolverhampton.

French Speed Trials.

As announced in last week's issue, the speed trials organised by the Moto-Cycle Club de France are to be run on the 23rd inst. on the Avenue des Acacias in the Bois Boulogne, Paris. Entries, which close on the 19th inst., should be sent to the Secretary, The Auto-Cycle Union, 83, Pall Mall, London, S.W.1.

Weybridge Residents Want Brooklands Races.

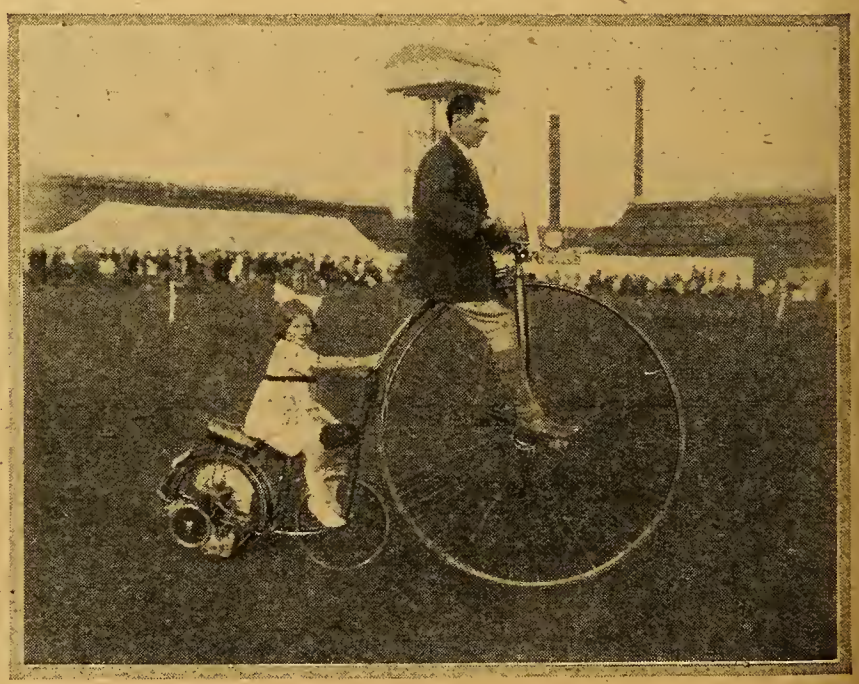
A body of residents in Weybridge is petitioning the B.M.C.R.C. against the abandonment of the 500 Mile Race at Brooklands. The petition is worded as follows: "We, the undersigned residents of Weybridge, having heard of your decision to scratch the proposed 500 Mile Race, hereby express our regret and disappointment, as the abandonment of this race has caused considerable financial loss to the district. We respectfully and earnestly request you to reconsider your decision."

The Gas Attack.

Some cyclists have an annoying habit of pedalling along furiously in the wake of a motor cyclist. A Norton rider advises us that a pumpful of Castrol "R" given to the engine makes an effective "gas screen" which will repel the most determined hanger-on.

New Offences.

For riding a Ner-a-car "hands off" in Shrewsbury, T. O. Mullings, a local motor agent, was fined £5 and his licence suspended for six months. Evidently the Bench did not know that it is often unnecessary to grip the handle-bars to steer safely on the machine in question. But that is not all. It was discovered that the defendant was deaf; and apparently it is because "it was a very dangerous thing for a deaf man to be riding a motor cycle" that such a heavy penalty was imposed. Of course there is no law against deaf people holding driving licences, and the element of danger involved is small.



A QUEER COMBINATION. This amusing "outfit" was entered in a recent comic cycle parade on the Humber Sports Ground at Coventry. Several of these old "penny farthing," or "ordinary" bicycles were entered, but the idea of attaching an Auto-wheel caused the greatest amusement among the spectators

NER-A-CAR

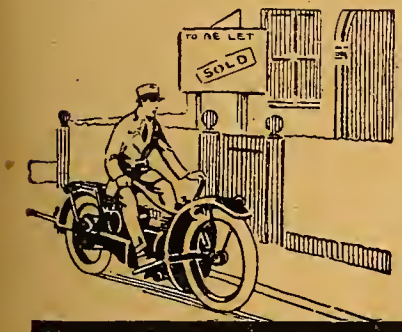
MOTORING ON TWO WHEELS

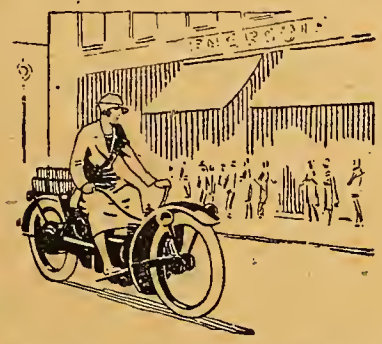
£65

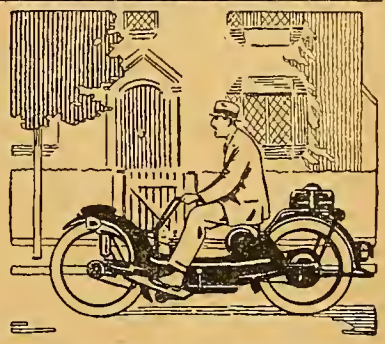
Ex Works.

The Ner-a-Car takes you anywhere without effort, mess or fuss, and brings you back safely, comfortably, "cleanly," quickly. Most men and women need this essential travel help.

The Doctor needs the Ner-a-Car; so does the housewife when shopping or visiting. The Estate Agent or other professional men need the Ner-a-Car every time they go out on business.







The Ner-a-Car does not skid. Is absolutely clean to drive, starts like a car, travels smoothly like a car, and climbs hills easily. Does 80 miles to the gallon—cheaper than 'bus, traiu or tram.

Write for the Ner-a-Car Catalogue. Learn how the Ner-a-Car gives safe riding in traffic or on greasy roads. See how equally suitable it is for man or woman.

MOTOR CYCLE SUIT

With Plaited Leather Belt.

GUARANTEED WATERPROOF

SPECIFICATION

MADE from hard-wearing double texture material with an interlining of Rubber. Double Breasted Jacket, with all-round Belt and Leather Buckle, large Patch Pockets, and convertod collar to button right up to neck, to fasten with Throat Tab. Wind Cuffs in sleeves. All seams of the Suit are rubber cemented and taped with extra material, making the garment absolutely waterproof. Overall Trousers with spat - shaped leg; wind gussets to keep the wind from the leg and boots; fastened with patent clasp fasteners, enabling the trousers to be pulled off in a moment. The suits are newly manufactured, and every care is taken with details so that the garment will meet the severest test. We give full guarantee that this suit is thoroughly waterproof, and impervious to the most drenching & continuous downpour.

THESE SUITS ARE NEWLY MADE FROM FRESHLY PROOFED MATERIAL BY EXPERIENCED WORKMEN, AND NOT HALF PERISHED CLEARANCE LINES OR W.D. SURPLUS.

PRICE **35/-** **NO EXTRA CHARGE FOR CARRIAGE.**

State chest measurement and height when ordering.

Sheen Park-Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS

122, Shortlands Road,
Sittingbourne, Kent.
August 17, 1922.

Mr. Brodrick,
The South-Western Appliance Co.
Dear Sir,
The St. Helier Building arrived on Saturday, two days before promise of delivery, and we are more than satisfied with it.
We erected it on Wednesday and it went together like clockwork. I am very pleased we left the order with you, as all who have seen it think the value is remarkable and admire the artistic appearance. Trusting and believing it will get you further orders from this district.
Yours faithfully,
THOS. R. KENNETT

BOSCH D.A.L. twins, enclosed, waterproof, any degree, suitable for Indian, Harley, etc.; £4/10.

FELLOWS new magnetos always in stock, any degree for any engine; also a large selection of second-hand magnetos, all makes.

GUARANTEE.—Every magneto, no matter what the price or make, is guaranteed by us. Not merely that same is in good order at time of sale, but a plainly written statement that we guarantee each machine against all defects for a period of 12 months. This, we maintain, justifies us in charging a few shillings more than certain of our competitors.

RELIANCE cordially invite customers to their works to see any of the above on test. Magneto list, giving full particulars, sent upon application. It will pay you to deal with a firm of repute.—Reliance Magneto Repairing Co. (1914), 283, St. John St., London E.C.1. Tel.: Clerkenwell 4290. T.A.: Remagco, Smith, London. [9816

IGNITION, LIGHTING, ETC.

MAGDYNAMO Engineering Co., Ltd., for magnetos, spares, and repairs.

MOTOR Cyclists fit reliable high quality magnetos now and avoid certain failure of inferior magnetos.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied; will certainly recommend these magnetos."

WHY is it that the leading Motor Cyclists—the men who know—are almost all sending to us for their Magnetos?

THERE must be a reason; there is; it is because the Magnetos of quality and guaranteed service, supplied by Magdynamo, beat all other Magnetos.

MAGDYNAMO will take your old Magneto in part payment.

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you want a reliable magneto with 12 months' guaranteed service that will give you starting without worry, a smoother running, and more powerful engine and better results from your Douglas? Then send for a latest enclosed waterproof type Bosch ZA2 magneto now, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P. and M.'s, with 12 months' guaranteed service, price £3/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparking plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if urgent, and return it with a written 12 months' guarantee. While your magneto is being repaired we can lend you another free of charge. We could not make these offers if we were not certain of the quality of our work

YOUR old magneto will be equivalent to new at a low cost. Send us your defective magneto now.

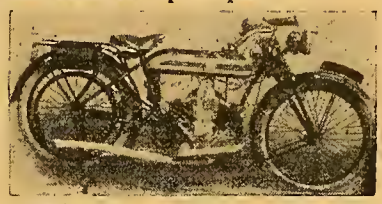
You are Sure of

satisfaction when you deal with me, as every article is sold on the "Money Back if not satisfied" principle.



Any part for any model DOUGLAS by return of post. Here are some of my Specialities :—

TWIN RINGS. Give more power—perfectly gas-tight—prevent carbonising as oil cannot pass the piston—wear indefinitely—need no running in. For 2¾ h.p. Douglas, price **1/6** each; 4 h.p. Douglas, **1/8** each; Sunbeam, Humber, and Rover, 75mm. bore, **1/8** each; B.S.A., Triumph (pre-1919), Rudge (pre-1921), New Hudson, 3½ h.p. Singer, L.M.C., 4 h.p., and Precision, 3½ h.p., 85mm., **1/9** each.

ZOOM! ZOOM!! The fashionable and efficient exhaust system. Adds pounds to the appearance of any Douglas and lets the engine give off its full power. In beautifully burnished copper, price **30/-**. In burnished nickel, price **33/6.**

THE TONY COMBINED ALUMINIUM FOOTBOARD AND FOOTRESTS. Beautifully finished—giving a natural riding position. A real solid cast job. Something that lasts for ever. Price **30/-** per pair complete.

THE CORAM PISTON, fitted with radiating internal fins. Correctly designed, much lighter yet stronger than standard. Fitted with the patent twin rings in one groove. Complete with rings and gudgeon pin. Price **29/-** per pair. Insist on having these fitted when your mount is next down, and you'll never regret it.

CORAM'S PATENT COMBINED ALLOY VALVE CAP. My latest idea. Never blows out, never seizes in the threads. Prevents knocking and overheating. A real boon. For 2¾ h.p. and 4 h.p. Douglases. Price **4/-** each.

W. G. Coram

650×65.—Palmer cord heavy, 42/6; Wood-Milne 4-ply, 37/6; 3-ply, 30/-; Goodyear cord 5-ribbed, 42/6; tubes, 8/-.—Below.

BULL'S Rubber Co., Ltd., 3, Upper St. Martin's Lane, London, W.C.2 (next door to Aldridge's). 'Phone: Gerrard 1347. [0869

4 ONLY, 26×2¼ side treaded covers, suitable for grass track work, used once only; 15/6 each.—Herbert Robinson, Ltd., Cambridge. [2214

500 New Beldam Covers to clear, all sizes, 15/- each, postage 1/6 extra.—Homerton Rubber Works, Brooksby's Walk, Homerton, E.9. [0351

SCOTTISH readers will find it advantageous to purchase their tyres from McArthur, Hill and Co., 436, Argyle St., Glasgow. Lists post free. [5200

MASONS.—The most competitive market; 700×80 Palmer cord, 45/-; 650×65 Michelin Universal, 35/-; 28×3 Goodyear A.W.T., 47/6.—Below.

MASONS.—Great offer Wood-Milne Key-grip; 26×2½ heavy, 21/6; ditto, extra heavy, 25/-; 28×3 heavy, 30/-; 700×80 heavy, 35/-; 24×2¼ heavy, 18/6; 26×2¼ extra heavy, 23/6; 26×2¼×2¼ extra heavy, 28/6; 650×65 extra heavy, 25/-; 28×2½ extra heavy (American), 30/-; approval against remittance, satisfaction guaranteed; carriage paid.—Masons, The Tyre House, Ipswich. [0916

CLIPPER Ideal New Heavy Covers, 26×2¼, 24/-; 26×2⅜, 27/-; 26×2½×2¼, extra heavy, 32/-; carriage 1/3.—Davies, Union St., Wednesbury. [4452

WORLD'S Heaviest Tyre, 6-ply, ⅞ thick, puncture-proof, 26×2¼ and 2½, 25/-; 28×3, 30/-; 650×65, 38/-; 700×80, 45/-.—Durant, Bourne, Farnham. [1675

ECONOMIC Tyres.—We have the following blemished and clearance covers and tubes in stock. We send on 7 days' approval against remittance, carriage paid, passenger train.

ECONOMIC.—24×2, Clipper Ideal, 15/-; tubes, 5/-; 24×2¼ (also for 2in. rims) Clincher Junior de Luxe, heavy, 20/-.

ECONOMIC.—26×2 Clipper Rubberstud, 17/6; 26×2¼ Palmer heavy cord, 37/6; Firestone non-skid, 28/6; tubes, 5/6.

ECONOMIC.—26×2½×2¼ Goodyear All-weather, 37/6; Rom rubberstud, 25/-; tubes, 6/6.

ECONOMIC.—26×2½ O.S. Redfern heavy rubberstnd, 27/6; Clipper Ideal, extra heavy, 35/-; tubes, 7/-.

ECONOMIC.—28×3 Goodyear All-weather, 49/6; Goodrich Safety, 47/6; Firestone non-skid, 45/-; Portage non-skid, 41/-; tubes, 6/6.

ECONOMIC.—650×65 Stepney Roadgrip, 39/6; Goodrich Safety, 39/6; Clipper, extra heavy, 32/6; tubes, 6/6.

ECONOMIC.—700×80 Beldam V-grooved, 50/-; Ecooomic, extra heavy, 42/6; tubes, 6/6.

ECONOMIC.—Dunlop Rubberstud, fully warranted; 24×2, 22/6; 24×2¼, 24/9; 26×2, 24/6; 26×2¼, 25/9.

ECONOMIC Tyre Co., 314, New Cross Rd., S.E.14 (near Town Hall). 'Phone: New Cross 1393. [2238

TYRE Repair Specialists.—H.F. process throughout, including retreading burst covers. Every kind of repair to tyres and tubes in 24 hours, retreads in 4 days.—The Motor Tyre Co., 66, High St., West Bromwich. [3955

LONG-DISTANCE Retreads, three-ribbed pattern, returned like new, 26in. tyres, 20/-; 28in. tyres, 25/-; burst tyres made perfect, chafed beads remoulded, tube vulcanising, butt ends fitted; best work in the country.—Melton Rubber Works, Melton Mowbray. [0347

The Charm of the 1,000 c.c. Solo Machine.

EVERY now and then readers battle in our correspondence pages over the old question of the big twin solo mount's justification. It is after all neither original nor unnatural to ask why the type continues to exist in face of present-day 250 c.c. and 350 c.c. machines of astounding efficiency and remarkable road capabilities. At the same time it is not difficult to make a satisfactory answer.

The querist in this case is a distinct type; the man who takes up cudgels on behalf of the 1,000 c.c. mount is another. Usually the one cannot see the other's viewpoint, and the argument between the two may be interminable.

It amounts to this. The best sports or semi-sports 350 c.c. singles have sufficient speed and hill-climbing powers for ninety-nine per cent. of the world's motor cyclists. But it is not effortless speed, nor is it sheer power. "Revs" in the first place and "revs" *plus* a low gear in the second are the means whereby the small engine does big things. People of a certain temperament object to both; they dislike fussiness.

Particularly is this the case with really hard riders who think little of a 300 miles trip between breakfast and supper. The average man seldom if ever rides his machine hard enough and long enough even to notice the trait at all.

Furthermore, when a 350 c.c. mount is driven at as high an average speed as prudence permits, it is often working very nearly at the limit of its capacity. Under similar circumstances the big twin retains a proportionately great reserve of power. Not only, therefore, is the latter, with its higher gear, more pleasant to drive; it also wears longer and requires less tuning and adjustment during any given yearly mileage. Possessing larger tyres, it is less tiring to drive.

There will always be a demand for a well-designed big twin solo mount. Even to-day the British market does not too well cater for the soloist who appreciates the deceptive smoothness of a 1,000 c.c. engine driving through a $3\frac{1}{2}$ to 1 gear.

Hill Climbing Contests.

REGULAR attendance at modern hill-climbs arouses wonderment as to whether the present policy regarding these events is the best one. Easy gradients which are hills in name only are becoming the rule. We recognise that modern hill-climbing is not popular with the police authorities in many districts, and it is becoming particularly difficult, especially in the Midland counties, to obtain permission to run a climb on a hill that is in any way suitable.

Not infrequently the only available venue is quite unsuitable as a test; either the hill is on a main road where traffic causes long delays, or the hill is too easy or too tortuous for safety. A straight hill with a gradient reaching perhaps the easier single figures becomes a speed trial pure and simple, and the honours are usually carried off by a machine which covers the measured distance at well over a mile a minute.

On the other hand, with regard to freak hills, reliability trials cover all the ground that is necessary, and prove that the only machines which are mishandled or are out of tune are likely to fail under any test which would be applied by the touring motor cyclist.

The alternative appears to be a climb on American lines, wherein an impossible gradient (not necessarily on a road) is chosen and the award goes to the competitor who reaches the highest point. Suggested venues would be interesting.

An index to the advertisements in this issue will be found on the page facing the back cover.

For the Novice.

I HAVE latterly had intercourse with sundry novices, who complained that the starting up of their engines was uncertain, both when cold and hot. In every case the trouble was of their own making, and was connected with flooding of the carburetter. They variously tickled their float chambers much, little, or not at all. They leant their machines against the kerb, now on the offside, now on the near; and as all the machines had their float chambers mounted at one side of the jet chamber, the petrol level was raised or lowered accordingly. In spite of such vital variations in the fuel supply, they expected the engine to start at the first kick on a lever setting which they never altered by a hair. Furthermore, they used the same lever setting whether the engine was ice-cold or red-hot, whether its cylinder was full of gas, or contained nothing but dank, stale air, inhaled the night before. Every practised rider is aware that circumstances alter cases when an engine has to be started up; and a very few experiments teach him whether the air lever should be closed right off for starting or not; and if not, how far it should be opened. But these unfortunate beginners had struggled vaguely and hopelessly for weeks, never getting a quick start except by some gorgeous fluke. Let them take heart. *Moi, qui vous parle*, pass through a similar phase, lasting perhaps twenty-four hours—with most new machines which I take over. At the expiry of that period I can generally set the levers to guarantee a first kick start, cold or hot.

Celluloid Over the Eyes.

THERE are several very obvious objections to goggles. They make one look like a cross between a deep-sea diver and a bullfrog. They are always getting broken. They are uncomfortable, unless the fit is perfect and the quality good. They soon get dusty inside. They dim with condensed moisture when first adjusted on the face. It is now alleged that they hamper hearing. So it is not surprising that a variety of celluloid vizors are on the market. Within the last few months I have tested three different devices of the kind. The "Phace Screen"—comfortable; unwieldy; and hostile to tobacco and alcohol. The Pidko cap—a good tweed cap, with a celluloid vizor which folds into the peak when not required for use. The C.G.P. screen—a light, cheap, unframed mask, which rolls up into small compass for the pocket. All of these gadgets afford as good protection as goggles. The two small devices are perfectly sightly. None of the three are breakable. Yet I cannot vote heavily for them as against goggles, for the simple reason that celluloid imparts a faint yellowish tinge to the landscape, and scratches so easily. If somebody will invent a celluloid which is absolutely colourless and does not scratch, he will do us a good turn and line his own pockets most opulently. Until then, glass will remain more popular than celluloid. Many people who have purchased modern cars fitted with featherweight all-weather equipment are growing somewhat discontented with the jaundiced aspect their windows impart to the scenery. Can the doctors do nothing to help us? There are many motorists with rheumy eyes and noses, apt to run freely against a stiff wind. One would fancy that a chemical injection of a drop or so might be the best expedient? In the meantime I take glass goggles when I am out for speed, and wear a Pidko cap on ordinary occasions.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

In Winnipeg.

IF I am ever deported, I shall go to Winnipeg. The local motor cycle speed championships were held on a dirt track, and a gentleman named Johnson, of Fargo, N.D., managed to finish second in the three-mile professional championship after riding the last five laps with his back tyre off the rim. I think I might possibly win in company where such mishaps do not spoil one's time at all seriously. But I am rather intrigued as to the technical details; he must have had a few security bolts fitted. If Mr. Loughborough really wants to brighten Brooklands, he may be glad to know that at Winnipeg they relieve the tedium of a track programme by introducing a lady rough-rider on a broncho. Unfortunately the broncho bolted to its stable before she could finish all her stunts. No. On second thoughts I will not go to Winnipeg. My correspondent concludes with the remark that the hinterland is gumbo, and that if a shower catches you afield, you have to push home, for no man can hold up a two-wheeler on wet gumbo. Moreover, the city streets are crammed with Fords, and for six months in the year you have to boil your lubricating oil before it will flow out of the can. Incidentally, how do the Winnipegians manage to distinguish the professional rider from the amateur? It is more than we have ever achieved over this side.

No, Thank You!

A KINDLY reader has no doubt that I am an expert chemist, and desires me to test and report on the actual efficiency of various chemical dopes now advertised for motor cycle purposes, ranging from carbon removers to "stunt" oils, and substances designed to improve the power output or fuel economy of petrol. As a matter of fact, I make a point of testing most of these things. But it is often impossible to decide on the precise value of such dopes with no other data than road tests afford. In many cases the claims amount to no more than a fractional improvement in some item of the performance, and if such an improvement is noted under rough riding conditions, the difference may easily be due to some extraneous factor. I think it is up to the salesman to convince the buying public. The A.C.U. and Faraday House between them can usually devise a scientific and reliable test of almost any motor cycle invention; and I do not care to commit myself without irrefragable evidence.

Look to Your Lamps.

DAYS are already shortening, and in a week or two the clock will be put back an hour. It is high time for us all to overhaul our lighting equipment. Happy will be the man who has a good dynamo. Especially if he remembers to replace that spare bulb which he used up last spring. I do not intend to cover eighteen miles with a pocket flash lamp strapped on to my headlamp, as happened this time last year.

No Punctures.

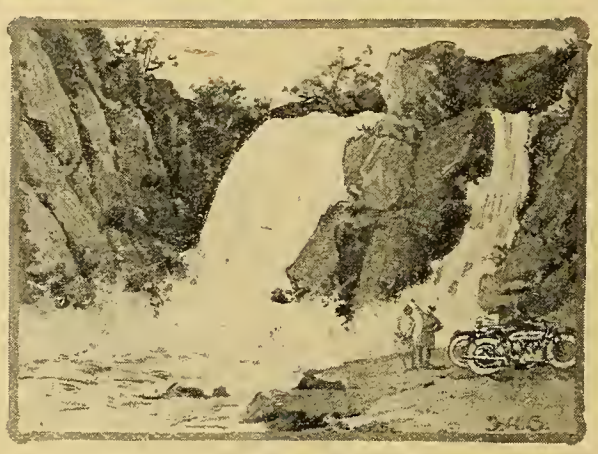
ALL this summer I have run on Challenger tubes, which now deserve a fuller report than I was able to make a year ago. It is perhaps unfortunate from the standpoint of any interested reader that my tyres have dodged any large gashes all this year. The tubes have proved perfectly efficient in promptly sealing small nail punctures, against which they form a most useful insurance. Whether they would succeed against major injuries is doubtful, and I should not feel sanguine on the point. I have tested them in 3in. tyres, which very seldom pick up a nail; and also in ordinary small tyres, which are perpetually collecting ironmongery from the road. The sealing is so prompt and complete that one remains unaware of the puncture until one notices a projecting nail at a stoppage, or detects a hole when examining the dismounted cover later on. If there is any loss of pressure during the sealing process, it is too slight to be noticeable except to instruments.

Views.

MY colleague "Friar John" started a hare which should prove full of running when he asked for the finest prospect in Great Britain. I suppose he is ruling out scenes which depend on the temporary camouflage of fog, moonlight, and other auxiliaries? If not, even Trafalgar Square or Euston Station can be impressive under certain conditions, and Mr. Joseph Pennell's pencil could make the interior of a steel works look beautiful. However, I will make three serious contributions to his list. The pass of Brander, running down to Oban, deserves a vote, especially in certain lights. The prospect from the top of Blagdon Hill, between Taunton and Honiton, is always worth a visit. On the crossing of Dartmoor from Moreton to Tavistock there are some gorgeous panoramas, probably at their best as dusk comes on in summer, or when a heavy covering of snow brings up grey shadows diversified with the vivid green of the grass edging the moorland brooks. I would warn anybody who wishes to sample the view from the summit of Applecross which is recommended that they should take a tent with them, and rations for a week; for the view obtainable on three of my visits can be reproduced cheaply at home by dipping a linen sheet in the bath, and wrapping one's head in it. Furthermore, no motor cycle will quite go where the best views are.

BOLTBY VILLAGE IN THE HAMBLETON HILLS. This little-known and beautiful district in North-East Yorkshire was first revealed to many motor cyclists in the Six Days' Trials, and later to competitors in the recent Yorkshire Centre team trial.

By Becks and Broad Acres



A Motor Cyclist's Week-end in the Yorkshire Dales: History and Legend of an Interesting District.

By G. BASIL BARHAM, C.E.
Illustrated by F. HAMMERSLEY BALL, R.A.

WITHOUT doing too much adventuring along bad surfaces and up almost impossible gradients, there is a vast deal to be seen and enjoyed in Yorkshire that is missed and unsuspected by those who only see the county when they dash through it in the wild Whitsun run to Edinburgh.

Richmond in Swaledale was our starting point.

There is little to say about Richmond that has not been said. The castle, eleventh-century work chiefly, is noteworthy in that King Arthur and his knights of the Round Table sleep in a cave beneath the keep, a fact not generally known. Years ago, someone actually found his way into the cave, after partaking of quantities of a strange brown decoction of malt bittered with hops and known locally as "stingo." He seems to have lost his nerve momentarily and fled as the knights awakened. For years after, until his death in fact, he searched for the lost entrance, but never again found the narrow passage leading to the cave, nor did the townsfolk, who sought it diligently for years after old Potter Thomson had gone to rest. Even to-day the children spend hours every fine day in paddling in the Swale and scrambling up the castle hill, searching for King Arthur's cave.

We visited St. Mary's church (to see the fine old carving removed centuries ago from Easby Abbey) and also Holy Trinity, where you can buy beefsteak or tobacco, as the church has been turned into shops. The bells, however, still hang in the tower and ring reveille and curfew every day in the year. We also rode to see the Grey Friar's Tower, all that remains of a huge building erected by the Franciscans in 1258.

The ten or eleven miles to Reeth are said to form the most beautiful road in England. There is a certain local prejudice evident in the statement, but, still, the scenery is not only charming but also impressive, just as is the approach to Torrington, the first view of Ulleswater, and the North End Road, Fulham, on a Saturday night. Just after leaving Richmond one passes through Grinton, where stands Swale Hall, the first place in Yorkshire where a cup of tea was made. It is said that the man who drank it went out in desperation and invented Yorkshire stingo.

There is little to see at Reeth except the old lead workings. The district seems heavy with lead ore and no doubt when road transport is improved it may pay to re-open the numerous abandoned mines. From Reeth, to Muker, nine miles of indifferent road lead through Helaugh, where a number of lead mines were once worked; a horn used to be blown here at night to call home the Swaledale cattle from the reach of wandering wolves and lawless men. From Muker, of course, we had to try Buttertubs Pass, which a few years ago was one of the wildest and least-known highways in England. Originally the ancient Neolithic military road between Swaledale and Wensleydale, it was once of great importance. We found the surface badly worn, and the gradient, although not steep, was trying.

The view from the top of Buttertubs—by the way, don't believe that guide book yarn about the name having been given to the hill because those curious round pits at the top look like buttertubs; they don't, and never did, and the name was given to the pass when people didn't know how to make tubs, but carted their butter round in skins!—is certainly very fine; one looks over apparently scores of miles of hills and dales, with a wonderful blue haze colouring every valley and a thousand jewels sparkling in the sunlight as it touches the millions of tiny rills, springs and streams. And when the beauty of the countryside has been ab-

Picturesque falls near Bainbridge, near which are pools famous for their trout.

"Perhaps the most forbidding looking ruin in England," Bolton Castle, in picturesque Wensleydale.

sorbed, it is a short run down into the old-world village of Hawes, where a lunch of country bread, milk with a sort of yellow scum on top, and Wensleydale cheese may be enjoyed.

When in Hawes, Hardaw Force, a waterfall with a drop of 100 feet and which, I should say, would provide the district with electric light were it properly taken in hand. must not be missed. At present it is a bathing place for elves and fairies, which dash in and out of the blinding spray and wonder why motor cyclists' hands are not so clean as could be desired. Near here is the Green Dragon, where there is bread and yellow butter and pale cheese and a quaint-looking, frothy, brownish liquid!

A Stone Age Road.

We turned sharp to the left at Hawes, up Scar Head, past Gayle, and on until a lane from the left joined our road. About 700 yards from here a green road crosses the track; this is a pathway of immense age, made by the Stone Age men thousands of years before the Romans came, and leads on the right to Arkholme and the sea. We turned along it to the left (there are a couple of awkward corners here, a right and left turn) to Marsett and on to Carr End. Here is the Devil's kingdom.

On the right is Semmerwater, which is no ordinary lake. On the contrary, it is a judgment, a cataclysm, a—well, if you go along the bank until you come to Curlew Stone you will see where the Devil sat and rocked in paroxysms of mirth as the wicked city of Semmer crumbled before his eyes and the rising waters drowned the land. Semmer was a busy town where they did "nowt for nowt for nobody," and when a saintly visitor came to them asking alms they drove him empty away. One man—I hate to tell this story, but perhaps he was a Lancashire man—stole the holy mendicant's cloak! On the other side of the city lived a poor man from Surrey or Kent or Middlesex, and he gave the saint bread and butter and cheese and a nice cold drink of water. So, as a reward, the saint told him to save himself as the city was to be drowned. And drowned it was, too, before morning, and as the Essex or Bucks man, or wherever he came from, hurried away, he heard the raucous laughter of the Devil and the shrieks of hundreds of drowning people. Probably there is some truth in the Semmerwater legend; some Celtic

By Becks and Broad Acres.—

or Neolithic settlement may have been swept away by the bursting of a mountain reservoir when the lake was formed.

At the end of the lake the road crosses the Bain, just the place for trout, and goes on to Low and High Blean, where the view of the lake is nothing short of superb, and then turns sharp right and back along the other side of the river to Askrigg. Bainbridge, said to be the Bracchium of the Romans, is passed, and at Brough and Addleburgh hills are two camps said to be Roman. We did not climb to see, but incidentally about 90 per cent. of the camps in this country that are said to be Roman turn out on examination to be British camps of the Bronze or late Stone Age. Incidentally, there is a chest of gold lying about in this neighbourhood. The story is trimmed with witches and goblins, but there is some truth in it, as in most old legends. The basis of this story is that the paymaster of the Ninth Legion, coming to pay the troops at Bracchium, was ambushed by Celtic insurgents.

An Askrigg Legend.

Bainbridge is an unattractive town, so we went on to Askrigg, where a few years ago they made almost all the Yorkshire cheese. The stock story about Askrigg is that a drunken man, returning home late at night, fell into an open grave in the churchyard. Next morning he was awakened by the Bainbridge horn, which is blown summer and winter every morning at six o'clock, and which he took to be Gabriel's call. He looked round; the churchyard was perfectly still. "Only me?" he queried to himself. "Well, this is a shocking poor show for Wensleydale."

Instead of going on to Newbiggin, there is a turn along a narrow lane to the right, past Nappa Scar and Woodhall. This lane leads to Aysgarth, on the main road from Northallerton to Sedburgh, and things that are not to be missed are Aysgarth Falls and the High and Middle Force, as they are called. Aysgarth Bridge is, to my mind, *the* beauty spot of Yorkshire.

In the Heart of Wensleydale.

Here is the heart of Wensleydale, the most picturesque of all the dales, and past Wensley is Bolton Castle, perhaps the most forbidding looking ruin in England, haunted by all the evil of the past. To look at it makes one shudder, and we ran from Bolton on the moorland path to Redmire moor, and there along the green road to Broomber Rigg and left to Leyburn. From here a tolerably good road leads past the old Stone Age fort of Malden Castle to Reeth once more, but this time we ran straight on up the hill to Arkleton and Booze, or, rather, we would have gone to Booze had we not kept straight on at Langthwaite. Having made the mistake we kept on, and at the fork of the road turned right to Arkengarthdale. This leads into the main road, which we followed to Bowes, where Dotheboys Hall, Bowes Castle (which is a small ruined Norman affair), and a shop or two are the chief objects of interest. Westward stretches the wild road through Brough to Carlisle, or—if you have a pillion passenger—to Gretna Green. But the story of our run ends at Bowes, which was our temporary destination.

DO NOT BLAME THE POLICE.

Attention to Mechanical Details No More Important than Attention to Legal Requirements

THERE is no doubt that attention to detail results in success in all branches of life. The careful motor cyclist knows that if he looks thoroughly over his machine, keeps it clean, and makes adjustments where these are required, he will be trouble-free on the road. But, often, he is not so punctilious in his regard for the minor points of the law respecting motor cycles.

Fortunately, at the present time prosecutions for exceeding the speed limit are few and far between, but there is police activity in other directions. It is the policeman's duty to see that the law, such as it is, is carried out, and if the man in blue has been hampered in one direction it is pretty obvious that he will break out in another, and that is why there are continuous prosecutions for such details as incorrectly lettered number plates. At other times the pillion rider unwittingly obscures the number plate, and this is a heinous crime in the eyes of the authorities. Absence of a brake is another, and noisiness is almost most serious of all.

Before Taking to the Road.

These little details may seem quite trifling in the eyes of the motor cycling public, but if they are neglected trouble is sure to follow, and it is up to the motor cyclist to see that his machine conforms to the law before he takes it out on the road.

The correct dimensions for number plates, etc., were published in *The Motor Cycle* of July 13th (page 65).

It is pretty general knowledge that every motor cycle must have two independent brakes, and it is clearly the duty of the motor cyclist to see that his machine is thus equipped.

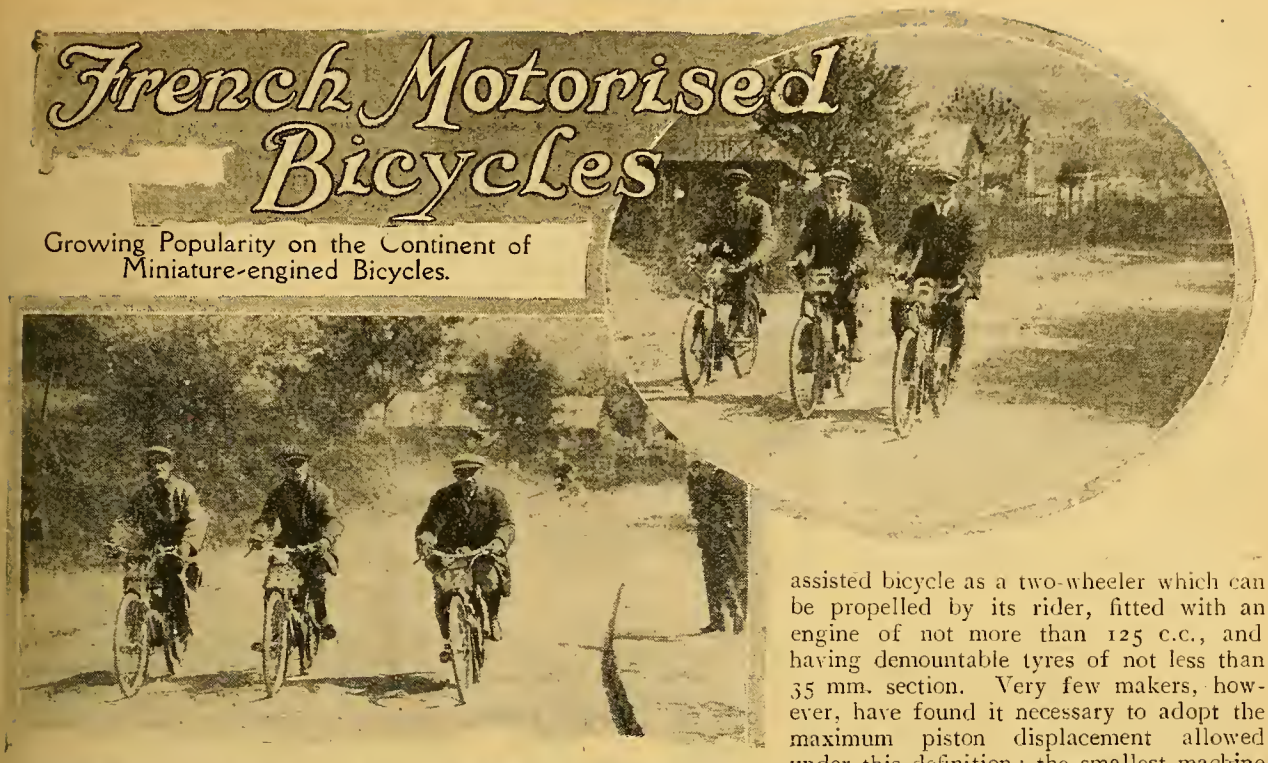
Noise the Deciding Factor.

So far as the silencer regulations are concerned, noise is a more important factor than silencer design. According to the law the exhaust must first pass through an expansion chamber. Probably a long, straight-through exhaust pipe is an expansion chamber, but as there is usually great difficulty in persuading a policeman or bench of magistrates that this is so it is obviously not wise to proceed along the highway with an exhaust pipe of a design which simply asks to be considered as a contravention of the regulation.

If attention to these details is observed we shall hear a great deal less of the annoying prosecutions of motor cyclists which have lately been so common.

French Motorised Bicycles

Growing Popularity on the Continent of Miniature-engined Bicycles.



Motorised bicyles in French trials. (Left) Three Griffons on a hill near Paris: these machines are fitted with two-stroke Sicam engines. (Right) A trio of Alcyon machines in the same trial.

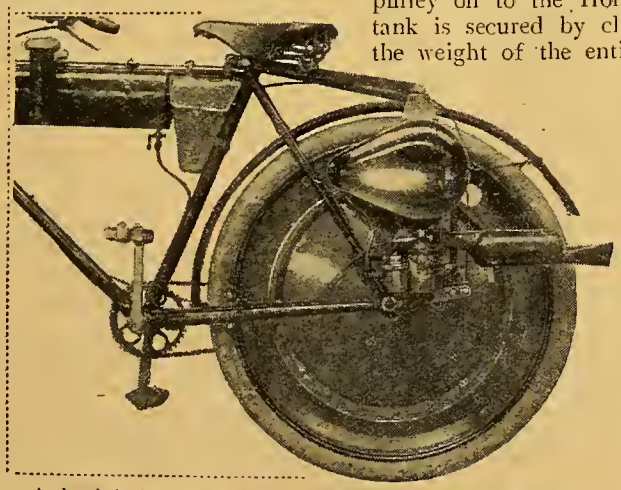
FRANCE is devoting a lot of attention at the present time to the question of motor-propelled bicycles, there being on the market not less than thirty different makes of these diminutive engines, while several thousands of them must be in use.

Motor-assisted bicycles do not appear to have been taken up to any great extent for touring, notwithstanding various competitions intended to popularise them for this purpose, but they are being used widely for utility purposes. To give a few local instances: having to call in the plumber the other day, he appeared on a motor-assisted bicycle, with his tool kit on the carrier.

Convenience and Handiness.

He maintained that for his short but frequent runs this type of machine was more convenient, as well as cheaper, than a full-sized motor cycle with sidecar. The gas inspector buzzed up not many days afterwards with a tiny two-stroke attached to a bicycle, and the village priest can be seen going round the district any day on a similar type of machine.

The authority responsible for the control of motor cycle sporting events in France defines a motor-assisted bicycle as a two-wheeler which can be propelled by its rider, fitted with an engine of not more than 125 c.c., and having demountable tyres of not less than 35 mm. section. Very few makers, however, have found it necessary to adopt the maximum piston displacement allowed under this definition; the smallest machine on the market, the Micromoteur, is only 63 c.c., while the average size is between 90 and 95 c.c.



A detailed view of the Voisin Fly. The two-stroke engine is suspended from the seat lug and rear forks.

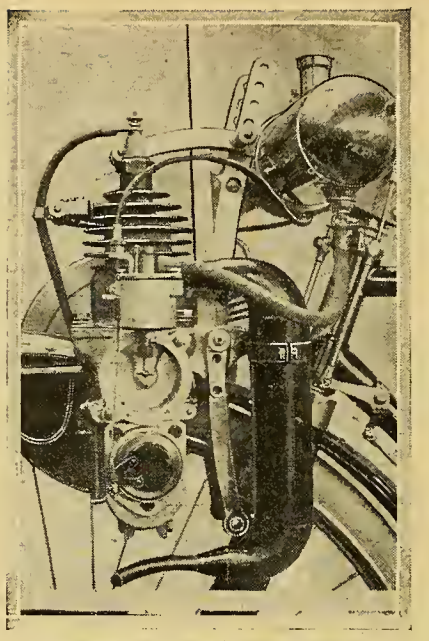
Motor Attachments.

Although the term "motor assisted bicycle" has been used in a general sense, there are really two distinct classes under this heading. A few firms sell an engine which they maintain can be attached to any bicycle in a few minutes without altering the machine in any way. The best-known machine in this class is the Cyclotracteur, which is made by one of the biggest taxicab companies in Paris. The engine is a two-stroke of 50 × 55 mm. (108 c.c.), which is mounted on the front forks of the bicycle and drives by friction pulley on to the front tyre. The small petrol tank is secured by clips to the handle-bars, and the weight of the entire equipment is between 24 and 25 lb.

The makers of the tiny Micromoteur have deliberately kept their engine size down to 46 × 38 mm. bore and stroke (63 c.c.), in order to secure low weight and make it possible to fit the little engine to any good bicycle without fear of breakage. They claim that with this small engine they can maintain ⅓ h.p., which is a higher power than the average cyclist can develop, and is quite sufficient to propel the machine at a good speed over all kinds

French Motorised Bicycles.—

of roads. In the matter of ease of attachment, this is undoubtedly the most satisfactory unit on the French market, for in competitions the little power plant has been taken off the cycle and then replaced in 13m. 55s. This, of course, was done by a rider very well acquainted with the mechanism, and the bicycle and engine were adapted to one another. The Micromoteur assembly, however, is so compact and so well laid out that it ought to be adaptable to the average bicycle in half an hour. The only change that might be necessary would be the removal of the forward extension of the front mudguard. As with the Cyclomoteur, the drive is by direct friction to the front tyre, but it is distinctive in having what is described as a " squirrel cage " type of roller and a complete spring mounting of the engine.



The smallest of France's many diminutive engines. It has a capacity of only 63 c.c. and is known as the Micromoteur.

Two-Strokes Predominate.

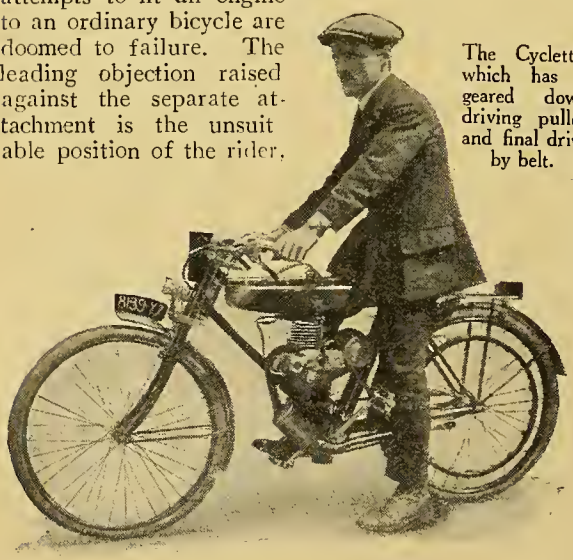
It is worth noting that the two-stroke engine is nearly always used for these lightweight machines. Indeed, the only exception appears to be the Anzani of 40 × 60 mm. bore and stroke (76 c.c.), designed for application to an ordinary bicycle. Some changes are necessary in the bicycle, however, for the engine is clipped in the frame to the saddle tube and transmits its power through reducing gears to a sprocket on the outside of the crank case. The driving chain runs round this sprocket, around the free wheel and over the bracket chain wheel. This, of course, calls for a chain of greater length than is required on a push bicycle; tension can be easily maintained on this chain by raising the entire engine slightly in the frame.

Many French makers appear to be convinced that attempts to fit an engine to an ordinary bicycle are doomed to failure. The leading objection raised against the separate attachment is the unsuitable position of the rider, who has to be placed high on a bicycle in order to get efficiency. When provided with an engine which will propel the machine under practically all conditions, there is every advantage in placing the rider as low as possible, in order to give him comfort and safety, but this cannot be done with the ordinary bicycle frame. Bicycle tyres are often found to be too small when an engine is added and the average speed is increased by at least 25 per cent. There is a tendency to overload after an engine has been fitted by adding a bigger saddle, a spring fork, a carrier and accessories, all of which, in conjunction with the increased speed, tends to stress the bicycle beyond reasonable limits.

True Miniature Motor Cycles.

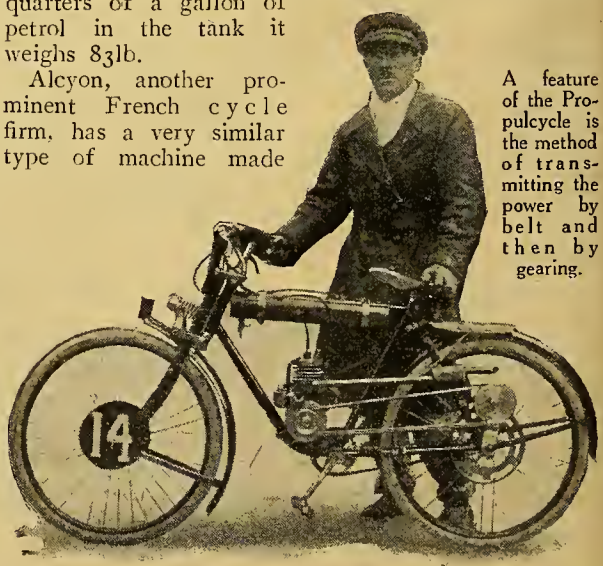
Because of this, several makers have adopted a modified type of bicycle, designed with the knowledge that it will more often be propelled by a petrol engine than by man power. It would be hardly correct to call these machines motor cycles as the term is generally understood. They are bicycles with lower and heavier frames, spring forks, bigger and more comfortable saddles, bigger section tyres, and possibly with a permanent pulley or belt drive. With the engine in position they do not usually scale more than 85lb., and if the engine is removed, which is a matter of thirty minutes at the outside, they can be used as push bicycles.

A good example of this class of machine is the Griffon, which is a strengthened bicycle with spring forks, fitted with the Sicam two-stroke engine of 50 × 50 mm. bore and stroke (98 c.c.). This engine has an external flywheel, chain drive to a countershaft, and V belt drive to the rear wheel. With three-quarters of a gallon of petrol in the tank it weighs 83lb.



The Cyclette, which has a geared down driving pulley and final drive by belt.

Alcyon, another prominent French cycle firm, has a very similar type of machine made



A feature of the Propulcycle is the method of transmitting the power by belt and then by gearing.

French Motorised Bicycles.—

with both a closed and an open type of frame. Incidentally, the open frame seems to be more often found in the hands of country priests than of ladies. The engine used on the Alcyon is a 50 × 50 mm. (98 c.c.) two-stroke, which transmits its power by an enclosed chain to a countershaft, then by an open chain to the rear wheel. With spring forks, a comfortable saddle, and tank filled, its weight is practically the same as that of the Griffon.

Engines Similar; Transmissions Vary.

The interest of these little machines more often lies in the method of transmitting the power to the wheel than in the engine; indeed, the same engine can often be found on several machines with different systems of transmitting the power. On the Propulcycle a belt is used from the engine shaft to a pulley on the rear fork, this pulley having combined with it a pinion which engages with a larger diameter gear wheel secured to the rear wheel spokes. On the Cyclette the first reduction is obtained by a chain inside the engine housing, and the final and greater reduction by the belt drive to the rear wheel, a low gear being thus obtained without employing a diminutive pulley.

Friction Drive.

Voisin, the well-known car and aeroplane builder, has quite a distinctive type of motor-propelled bicycle designated the Motor Fly. The rear wheel of the bicycle is replaced by a special disc wheel equipped with a broad-faced pulley. A small two-stroke engine is suspended from the saddle tube and from the rear forks in such a way that a geared-down driving pulley is brought in frictional contact with the big-diameter pulley on the wheel. The frame and the front portion of the bicycle are not changed.

It might be imagined, in view of the growing popularity of motor-assisted bicycles, that scooters would also find favour. This, however, is not the case. There have been several attempts to popularise scooters, but the French public, which is not at all easily convertible to novelties, has never seen in them anything more than a passing fad. The idea, however, of converting a bicycle into a motor cycle, or of having a motor cycle which can be used as a pedal cycle on occasion, is finding more and more favour among the four-and-a-half million cyclists of France, and this type of machine promises to become quite an important factor in French motor cycle circles.

INHERENTLY NOISY SILENCERS.

Hard Metals Unsuitable for Exhaust Pipes and Expansion Chambers.

So much has already been written on the subject of silencers for motor cycle engines that at first sight it would appear that every point in connection with the subject has been discussed and thrashed out on many occasions and that there was nothing more which could be said on this important topic.

This is partly true, and much ink has undoubtedly been spilt in describing, explaining, designing, and arguing about the various silencing systems at present fitted to our machines, but there is another and very important aspect of this subject which has received little attention.

So far, discussion has centred round the advantages and disadvantages of expansion chambers, baffle plates, "straight through" pipes, and so forth, but very little attention has been paid to the materials of which these components are made, and that this is important can quickly be proved by one or two extremely simple experiments.

Cost the Deciding Factor.

As a rule, cost is the deciding factor which determines the material selected, and for this reason cold-drawn steel tubing is almost invariably used for the exhaust pipes, whilst mild steel sheet is employed in the construction of by far the greater majority of expansion chambers. It is now a commonly accepted fact that by using a sufficiently large expansion chamber, together with an extension pipe of small bore, a satisfactory degree of silence can be obtained at the expense of a slight loss of efficiency; but is such a bulky system absolutely essential? By making silencers of other material than cold-drawn steel, greatly increased degrees of silence can be obtained, because in many cases the "ring" of this hard vibrating metal accentuates the noise of the explosion.

The Advantage of Annealing.

If cold-drawn steel tubing be thoroughly annealed, it will be found that a much more pleasant and altogether more mellow exhaust note will result. In the same way, the ordinary copper piping is hard, and produces an unpleasant crack, but if it be thoroughly annealed by heating it to a dull red heat for 20-30 minutes and cooling in air, a pleasant mellow note will result. So many aluminium alloys reharden after annealing that this method is not practicable, and therefore these alloys are unsuitable for the manufacture of silencers from this point of view. Arguing on this basis, soft lead should be one of the best metals for silencers, and although it is, of course, totally unsuitable because of its softness and weight, yet a very interesting and instructive experiment, to those who have the facilities and time to perform it, is to try the effect of a straight-through lead pipe, and it is found that it effectively deadens the exhaust note of an engine which is extremely noisy with the usual steel tube pipe. It is, of course, needless to say that the pipe will soon melt, and so the experiment is only a short one.

It can be said, therefore, that if silencers were constructed of well annealed copper instead of hard steel, or some other non-resonant material, a decided improvement in effectiveness would result.

KEMIST.

STUDYING OVERSEAS CONDITIONS.

An Interesting Interview with Mr. George Stevens on his Return from a 42,000 Mile Tour.

AFTER an eight months' tour, touching India, Ceylon, Australia, New Zealand, and South Africa, Mr. George Stevens, of A.J.S. fame, has returned to Wolverhampton looking very much better in general health, and full of interesting information which will be of extreme value to the motor cycle trade.

In his journeyings Mr. Stevens calculates that he has travelled approximately 42,000 miles, exclusive of road travel. After touching at Bombay and Columbo, he visited the following towns in Australia: Perth, Adelaide, Melbourne, Sydney, and Brisbane; in New Zealand: Auckland, Napier, Wellington, Christchurch, Timaru, Dunedin, and Invercargill; in South Africa: Durban, Johannesburg, Pretoria, and Capetown.

Mr. George Stevens.

Price the Governing Factor.

From a short interview with him immediately on his return we formed the conclusion that he took a most broadminded view of general conditions, and was prepared to see the good points of competitive articles just as readily as the advantages of his own make of machine. He emphasised the fact that in overseas lands price is quite naturally a governing factor, but that the Australian and New Zealander have a leaning towards British machines, although the prices of these are so very much higher than that of their American rivals that they have but little chance of popularity.

The road conditions are such that Mr. Stevens is not hopeful of the outlook for the medium-powered machine, holding that a big twin is necessary outside the towns, but that there is a good chance for lightweights in and near the big cities. The difficulties encountered by British manufacturers during the war are not realised in Australia, nor is there much keen interest in British competitions, even the Tourist Trophy Races being watched with comparatively little interest. In New Zealand he found a rather more distinct leaning towards British machines, and the fact that there are many good arterial roads in this country increases the chances of the medium-weight machine so common in the British Isles. The roads in Australia and parts of New Zealand are such that it is impossible to attain in comfort a speed of 30 miles an hour for more than a minute or so; therefore a cool running engine with a low top gear is essential.

Mr. Stevens pointed out that overseas trade is improving, and that now is the moment to make a push for this trade. He is convinced that much can be done to improve the British motor cycle trade if manufacturers in this country will get together and make a serious effort. As he points out, it is necessary to produce in quantities to produce cheaply. To produce in quantities one must have a market, and there is an ample market overseas for the right type of machine. It will be necessary, however, to ensure the co-operation of specialist manufacturers so that prices may be reduced to a reasonable minimum. For the overseas market many refinements, considered in this country almost as necessities, may be omitted. For instance, such luxuries as sidecar windscreens, detachable wheels, full chain cases, etc., are not appreciated, and much money might be saved on such details.

When queried as to necessary alterations in British machines, Mr. Stevens informed us that there is an almost universal demand for twist grip controls, a considerably smaller demand for hinged footboards, and not once did he meet with a request for spring frame machines. With regard to the difference between the American and British trades, he clearly pointed out that American motor cycle manufacturers rely almost entirely on export trade to keep their factories busy, whereas the British manufacturer depends on the home trade, and looks upon the overseas trade as a side line. This he considers is a great mistake, since by cultivating the enormous overseas market it would be possible to increase production and lower export prices, and thus make a steadier demand.

Possibilities in South Africa.

South Africa is only a 17 days' journey away from this country, and Mr. Stevens is convinced that it would well repay British manufacturers to take a trip to that country in order to study typical overseas conditions at first hand. Though previously he always made a point of trying to understand overseas requirements, he now frankly confesses that he knew nothing of the matter until he had had personal experience, and he believes that if more manufacturers were to take the opportunity of obtaining first-hand evidence, there is no reason why the British motor cycle trade should not regain its ascendency overseas. In South Africa, also, the British manufacturer is at an advantage, since freight charges are in our favour.

O.H.V. NORTON LIGHTWEIGHT.

Advance Details of a New 250 c.c. Model with a Possible Speed of 70 m.p.h.

FOR some time past it has been known to a select few that the famous house of Norton was likely to produce a small engine for next year. We are now permitted to divulge the main features of the new machine, though at the present moment it is not completed.

The 250 c.c. engine (63 × 80 mm.) is a beautiful piece of design, following the lines of the overhead valve racing Norton. Both cylinder and detachable head are very thick in the wall, and are well ribbed for cooling purposes. Overhead valves are set at approximately 45° to the vertical, the port design being excellent. These valves are operated by push rods through overhead rockers, and the reciprocating weight of the push rods is looked after by return springs. Two rings (probably in one groove) will be fitted to the aluminium piston and a very large light gudgeon pin floats both in piston bosses and small end bearing. Steel stampings, each forming a flywheel and crank axle, are employed in the crankshaft construction, the two being united by the crank pin; each is mounted in ball bearings. Both cams are carried on a common shaft, there being only two gear wheels in the cam drive, though rockers are interposed between the cams and the base of the push rods. The magneto is mounted behind the cylinder.

The equipment of the machine itself will be on generous lines. 26 × 2¼in. wheels, all chain drive, internal expanding brakes (front and rear) will be features, and it is not unlikely that mechanical lubrication will be fitted to the engine. The frame will have a slightly curved top tube sloping to the rear.

It is hoped that the sports model will exceed 70 miles an hour, and it is possible that Mr. Norton will depart from his usual practice by making two entirely separate engines, similar in outward appearance, but one for purely sporting work and the other for touring.

The increase in the number of small machines is likely to be a feature of the forthcoming Olympia Exhibition, and the advent of a Norton lightweight is bound to attract a very considerable amount of public attention.

SHORT DISTANCE RECORDS BROKEN.

New Imperial-Jap and Trump-Jap Successes. Mrs. Janson gains another Record.

H. Le Vack.

H. Hall.

ON the 12th inst. H. Le Vack, riding a 346 c.c. New Imperial-Jap, succeeded in putting up some wonderful speeds in his short distance record attempts, covering the flying kilometre (with the wind) in 23.85 sec., a speed of 93.79 m.p.h., his mean time for the same distance covered both ways being 26.97 sec. (83.56 m.p.h.). He also covered the flying mile in 39.18 sec. (speed, 91.88 m.p.h.); mean, 43.97 sec. (81.86 m.p.h.).

Colonel Stewart, Mrs. Janson, and H. Hall also attacked the new standing mile and kilometre records in Classes A. and D. on the same day, and so fierce was Colonel Stewart's "get-away" on his little Trump-Jap that his front wheel leapt nearly two feet in the air, completely jumping the electrical strip.

Mrs. Janson.

Colonel Stewart.

Their records were as follows:—

CLASS D.

Colonel Stewart (750 Trump-Jap).

Kilom. ...	...	39.92s.	60.59 m.p.h.
Mean ...	...	38.04s.	58.80 m.p.h.

H. Hall (750 Trump-Jap).

Mile ...	...	54.66s.	65.86 m.p.h.
Mean ...	...	57.17s.	62.96 m.p.h.

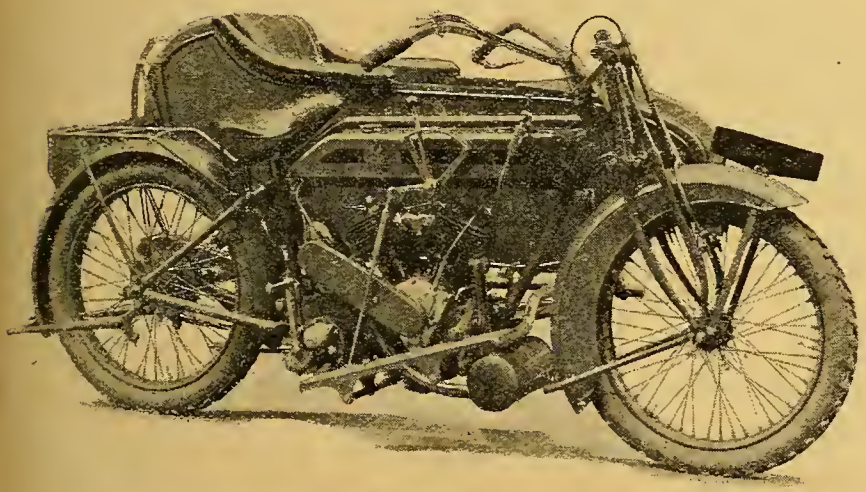
CLASS A.

Colonel Stewart (250 Trump-Jap).

Kilom. ...	...	45.73s.	48.91 m.p.h.
Mean ...	...	48.07s.	46.50 m.p.h.

Mrs. Janson (250 Trump-Jap).

Mile ...	...	80.98s.	44.45 m.p.h.



A utility Matchless outfit marketed, without the spring frame and one or two other luxury items, at £130.

NEXT YEAR'S MATCHLESS POLICY.

NEXT year there will be a three-speed, 350 c.c., single-cylinder, all-chain drive Matchless, fitted with 26in. × 2½in. tyres, to be sold at about £75. The engine will be of the high efficiency type.

Another attractive proposition of the 1923 Matchless programme will be a £130 sidecar outfit, fitted with either a 976 c.c. J.A.P. or 993 c.c. M.A.G. engine. This model, of course, is already available to the public. It has a rigid frame, clutch, and kick-starter, detachable wheels, and a comfortable sidecar. Extras are spare wheel, hood, screen, lamps, etc.

The sports model Matchless sidecar outfit will be considerably improved not only in detail, but in appearance as well. It will possess rakish lines and will be fitted with a "super-sports" M.A.G. or J.A.P. engine. The spring frame model will be unaltered.

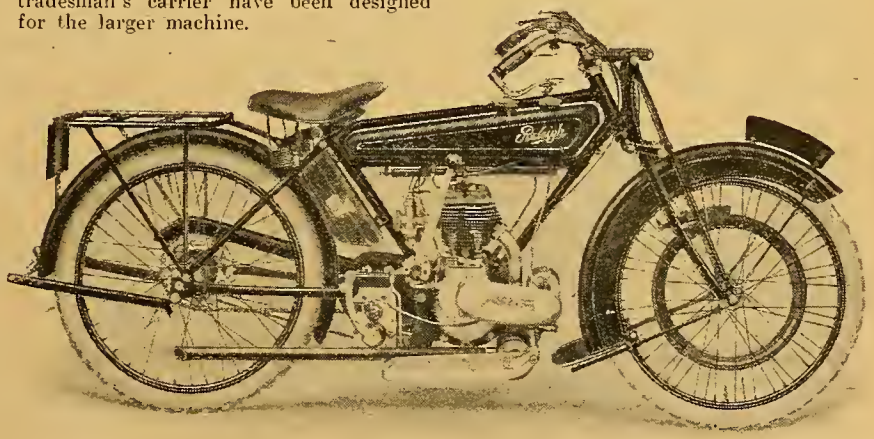
CHAIN-DRIVEN RALEIGH LIGHTWEIGHTS.

A CHAIN-DRIVEN version of the Raleigh lightweight made its first public appearance in the Six Days Trials, where it acquitted itself most creditably. Generally speaking, the new model has been little altered as compared with the belt-driven type.

In the engine the big end is now provided with a dipper or scoop to pick up oil from the crank case, and an adjustment is made possible for the exhaust lifter cable.

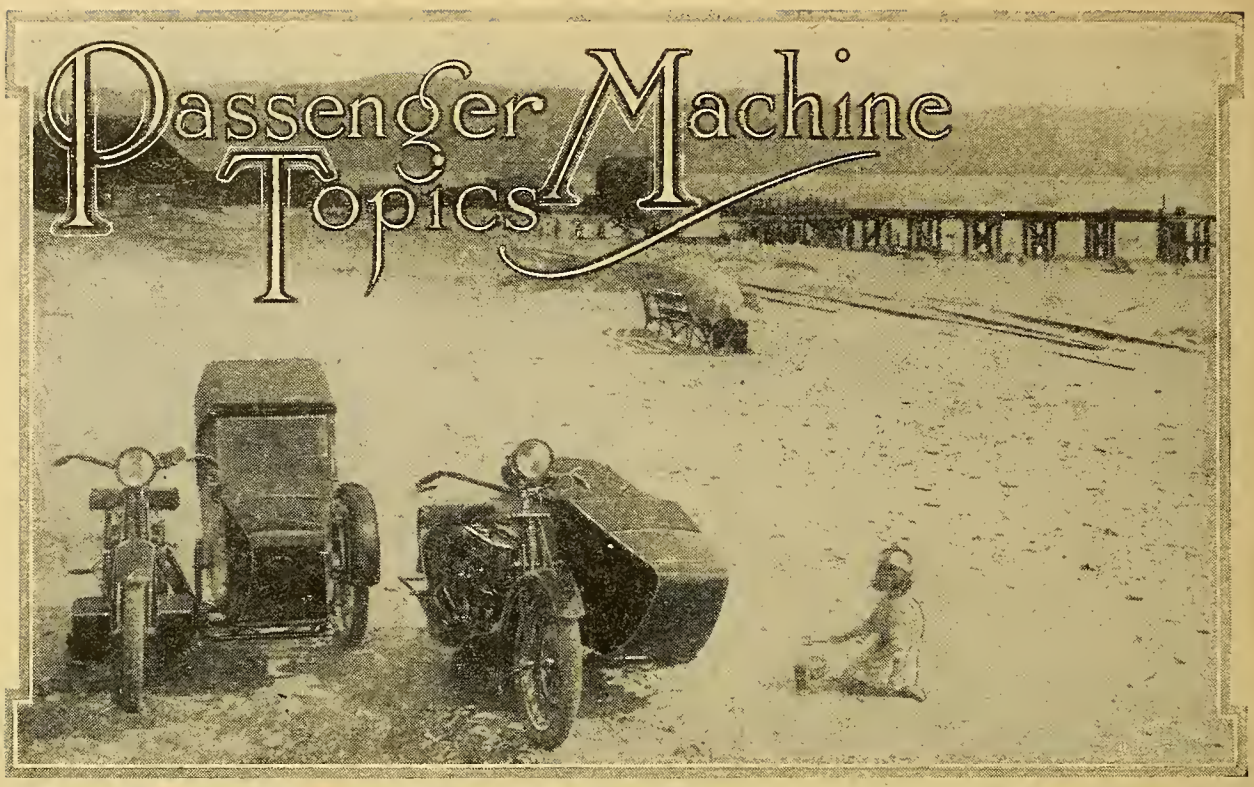
The rear brake is now of the internal expanding type of notably large diameter, and a quick adjustment is embodied. Small sprockets have been avoided in the transmission, 21 and 20 teeth being used at the engine and gear box respectively. For sidecar purposes a 19t. sprocket is supplied.

Either the 348 c.c. or the 398 c.c. engine is now available in the chain-driven form, and a special sidecar and a tradesman's carrier have been designed for the larger machine.



348 c.c. and 398 c.c. chain-driven lightweights have been added to the Raleigh programme.

Passenger Machine Topics



"Far from the madding crowd." Although one may not wish to spend an entire holiday in such a quiet spot as this, the sidecar enables one to visit the more remote and often attractive little villages within reach of the larger holiday resorts. The scene, showing two Enfield outfits, is near Aberdovey, Wales.

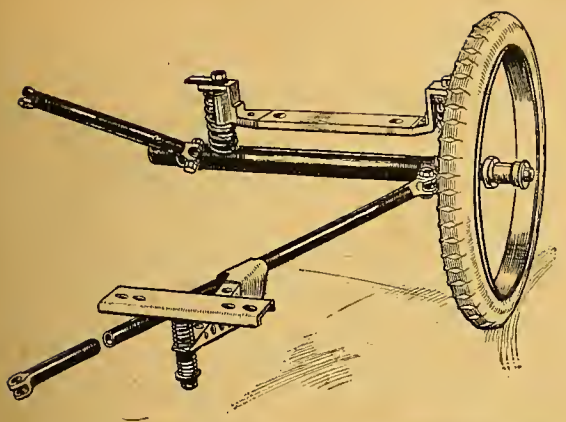
Air Cushions for Sidecars; Sidecar Screens; Weather Protection on Expensive Outfits; the Ultra-Light Chassis.

OUR grandmothers scorning the divans and huge Chesterfields of to-day, label us sybarites and decadents; they prefer a stiff-back pew to luxurious springing, but curiously enough they love their huge feather beds better than a mattress, evidently preferring luxury at night to luxury in the day. I have always thought a good deal of this high-falutin talk about our comfort-loving age to be merely whitewash. The old folk love comfort as much as we do. A certain grandmother loved for her candour in this age of compromise once rode in my sidecar and said rude things about its comfort. A while ago she saw me blow up with an air pump a big jelly-like seat and fit it in place of the ordinary spring seat. She asked, or I ought to say she commanded, me to take her a run, and I have never heard the last of that seat since. She has nothing but praise for it.

This wonderful air cushion is made by the Self Controlled Air Cushion Co., Sale, Manchester, and it is all that is claimed for it. It damps out road and machine vibration to a really wonderful degree, and transforms a badly sprung sidecar into a rideable vehicle, and a well-sprung sidecar into something much better than the average car.

THE tendency in sidecar design will in the future be towards lightness; lighter weight sidecars and light but scientifically designed chassis. Lighter weight means reduced running costs and fleeter machines. If three- or four-wheeled runabouts eventually usurp the big and powerful sidecar more attention will have to be given to the construction of ultra-light chassis capable of sustaining a roomy but lightweight touring body. Davis Bros., 14, Church Street, Rickmansworth, are undoubtedly on the right track with their Tritube chassis, a design minus bent tubes and malleable lugs. The chassis simply consists of three straight drawn weldless steel tubes, the rear axle actually being two inches in diameter. The illustration shows clearly the method of supporting the body on large coil springs. It is an admirable design not only for sports sidecars but for high-powered sporting machines. At present there is a lull in the craving for lightness in touring outfits, but it will soon be heard again and with greater insistence. The makers, who are studying this important matter of lightness with strength in both chassis and body design, will benefit eventually.

THE variety in sidecar screens is almost bewildering. This state of affairs is brought about because of the many difficulties and the many methods adopted in producing really effective protection for a sidecar passenger. After years of experimenting, efficacious screens have been made, but the problem was a more difficult one than that which car designers had before them. In a car the wind currents eddy round both edges of the screen with more or less the same inten-



Simplicity with strength is the keynote in the design of the Tritube chassis, made by Davis Bros., 14, Church Street, Rickmansworth.

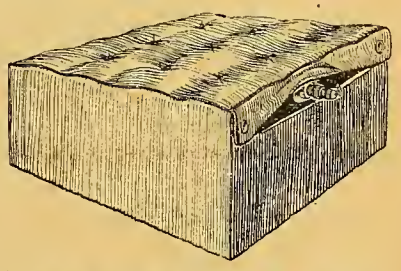
sity; certainly a side wind may produce more draught, but nothing like the draught that is deflected from the body of the driver on to the face of the sidecar passenger. The flat screen has proved almost worse than useless. Personally I would very much rather ride in a sidecar without a screen than in one fitted with the flat single-piece screen.

Many are the devices offered by manufacturers, but the chief aim of the majority of them has been the prevention of this irritating side draught. To combat this deflected stream of air effectively the obvious thing was to fit a side curtain from the flat screen to the rear of the sidecar. But unless neatly carried out this improvisation can spoil the appearance of an outfit. The A.J.S. concern has, however, in its steel-framed celluloid side curtain a particularly neat and effective design. But it is in the adjustable celluloid combined front and side screen where designers have shown most originality. The following two pages will show that all sizes and all manner of shapes are to be had to-day. Some of them attempt no more than to break the full impact of the wind; others, such as the Easting, aim at and succeed in producing a complete protection against the most violent storm.

QUITE an astonishing number of comparatively expensive sidecars are still fitted with 26 × 2¾in. tyres, and not a few with the 26 × 2¼in. size. Whilst a few of the arguments against the 3in. and 700 × 80 mm. type may hold good on solo mounts, there is none whatever against big tyres on sidecars. The astonishing difference between riding an outfit equipped with a set of 700 × 80 mm. instead of 2¼in. tyres should be sufficient to convince any manufacturer that the fitting of the largest possible tyres is all to his advantage, especially as the improvements to our roads are so slow in coming.

JUST now, due to price reductions of small cars anticipating the price changes in sidecar outfits, there is a good deal of discussion and comparison going on concerning the two types. A four-wheeled air-cooled Rover car now costs £180—very little more than the luxurious sidecars at to-day's price. Car advocates instance protection from the elements, whereas sidecar enthusiasts retort that carrying capacity for small families, storage accommodation, and the tax, petrol, and oil bills are all easier in the case of the three-wheeler. This lack of weather protection is my greatest grievance against the costly sidecar, and curiously enough I am always more peevish when driving in the rain with an elaborate machine complete with every trimming than I am when piloting a lightweight outfit. It is human nature, I suppose, to envy the owner of a little runabout who has paid but a few pounds more, and in some cases even less than you have, for a machine in which he can keep completely dry.

The sort of controversy I refer to has gone on for years and will continue for years no doubt. Many false prophets forecasted the early demise of the sidecar many years ago, but it is still very much alive and giving enjoyment to thousands of devotees. The writer personally thinks the future sidecar must be lighter and more simple. The man who pays £100 or less for a complete outfit rarely bothers to make comparisons; his vehicle is distinctive, there is nothing that can compete with it for economy, and with that big credit item in his mind he tolerates the wet rides with smiles of resignation. Nothing can ever usurp its present position; there is nothing, in men's minds, on the drawing-board or in the experimental workshops at present, that can possibly take its place. But one dare not judge so definitely the big and expensive sidecar outfit.

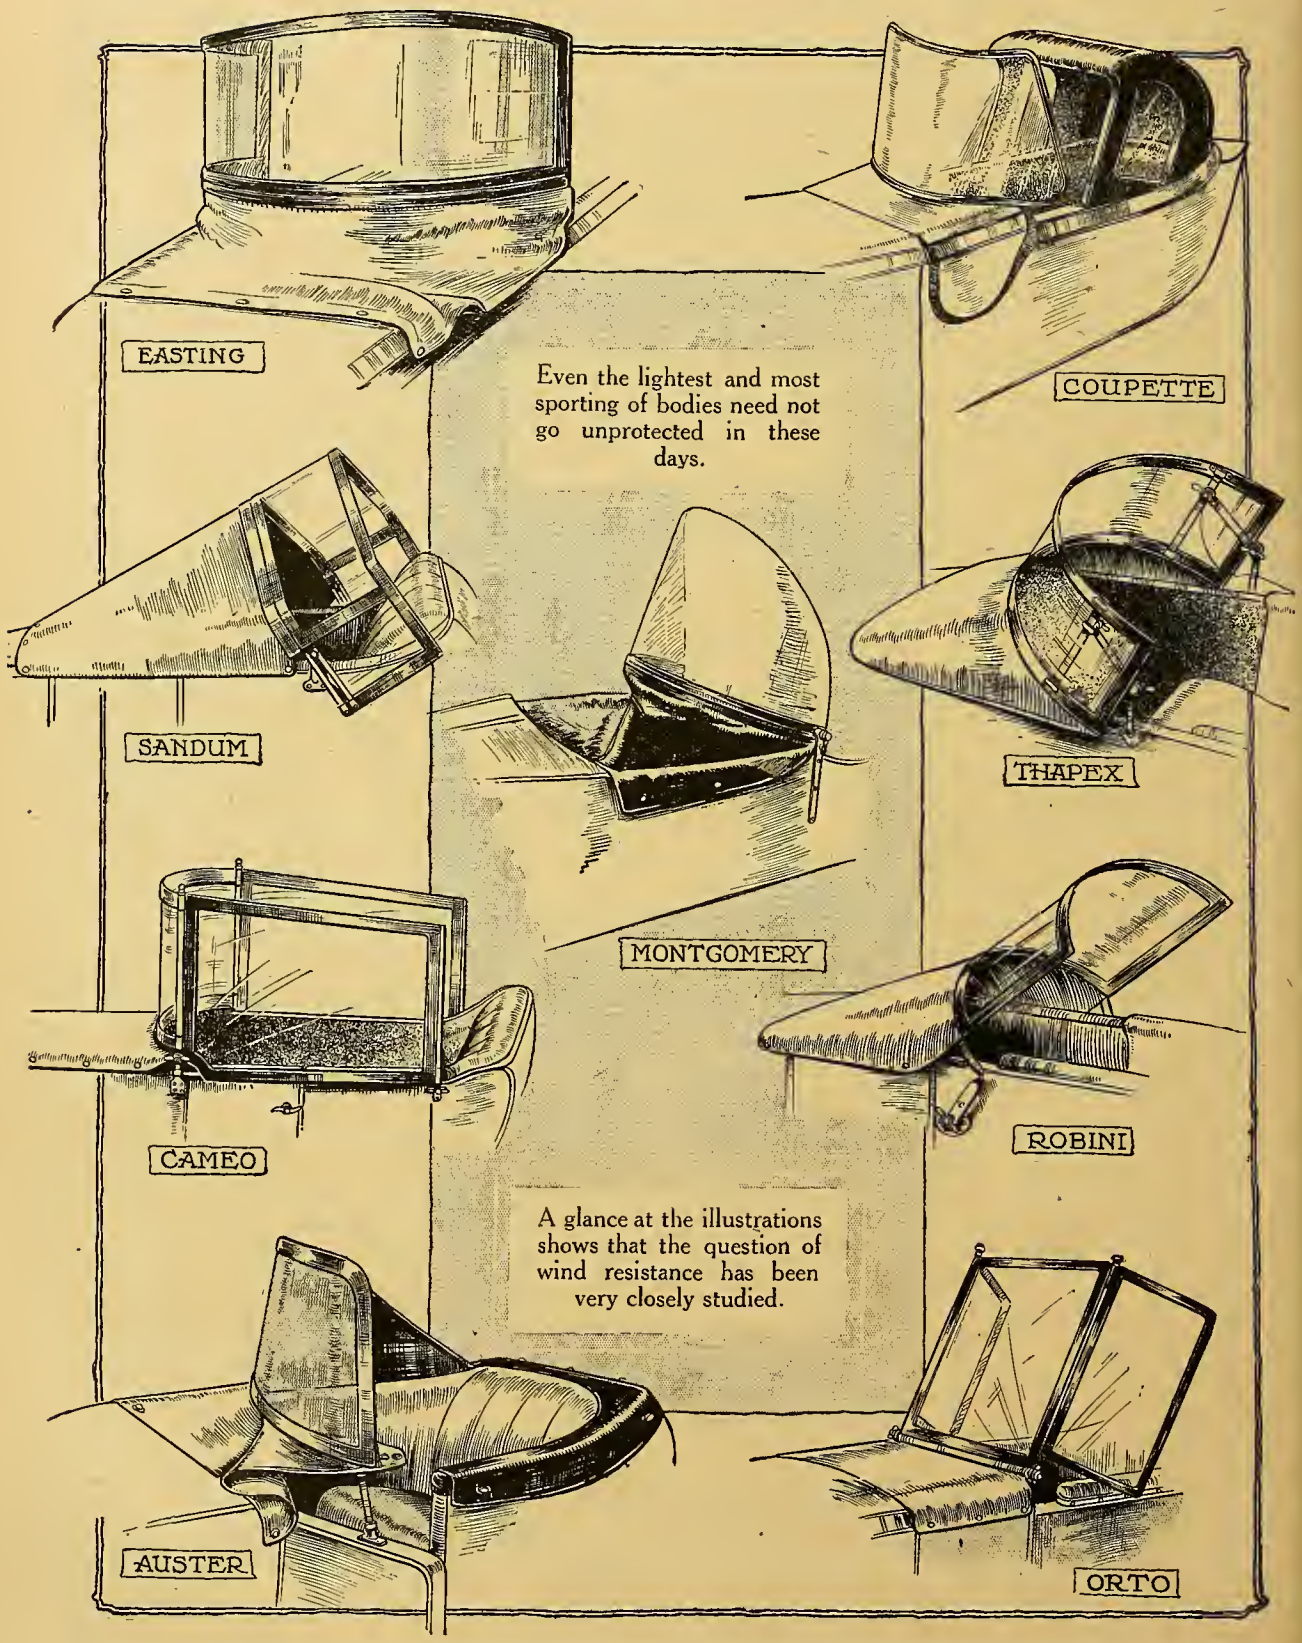


A sidecar air cushion made by the Self Controlled Air Cushion Co., Sale, Manchester. This type may eventually usurp the old spring seat, for its superiority is unquestioned.

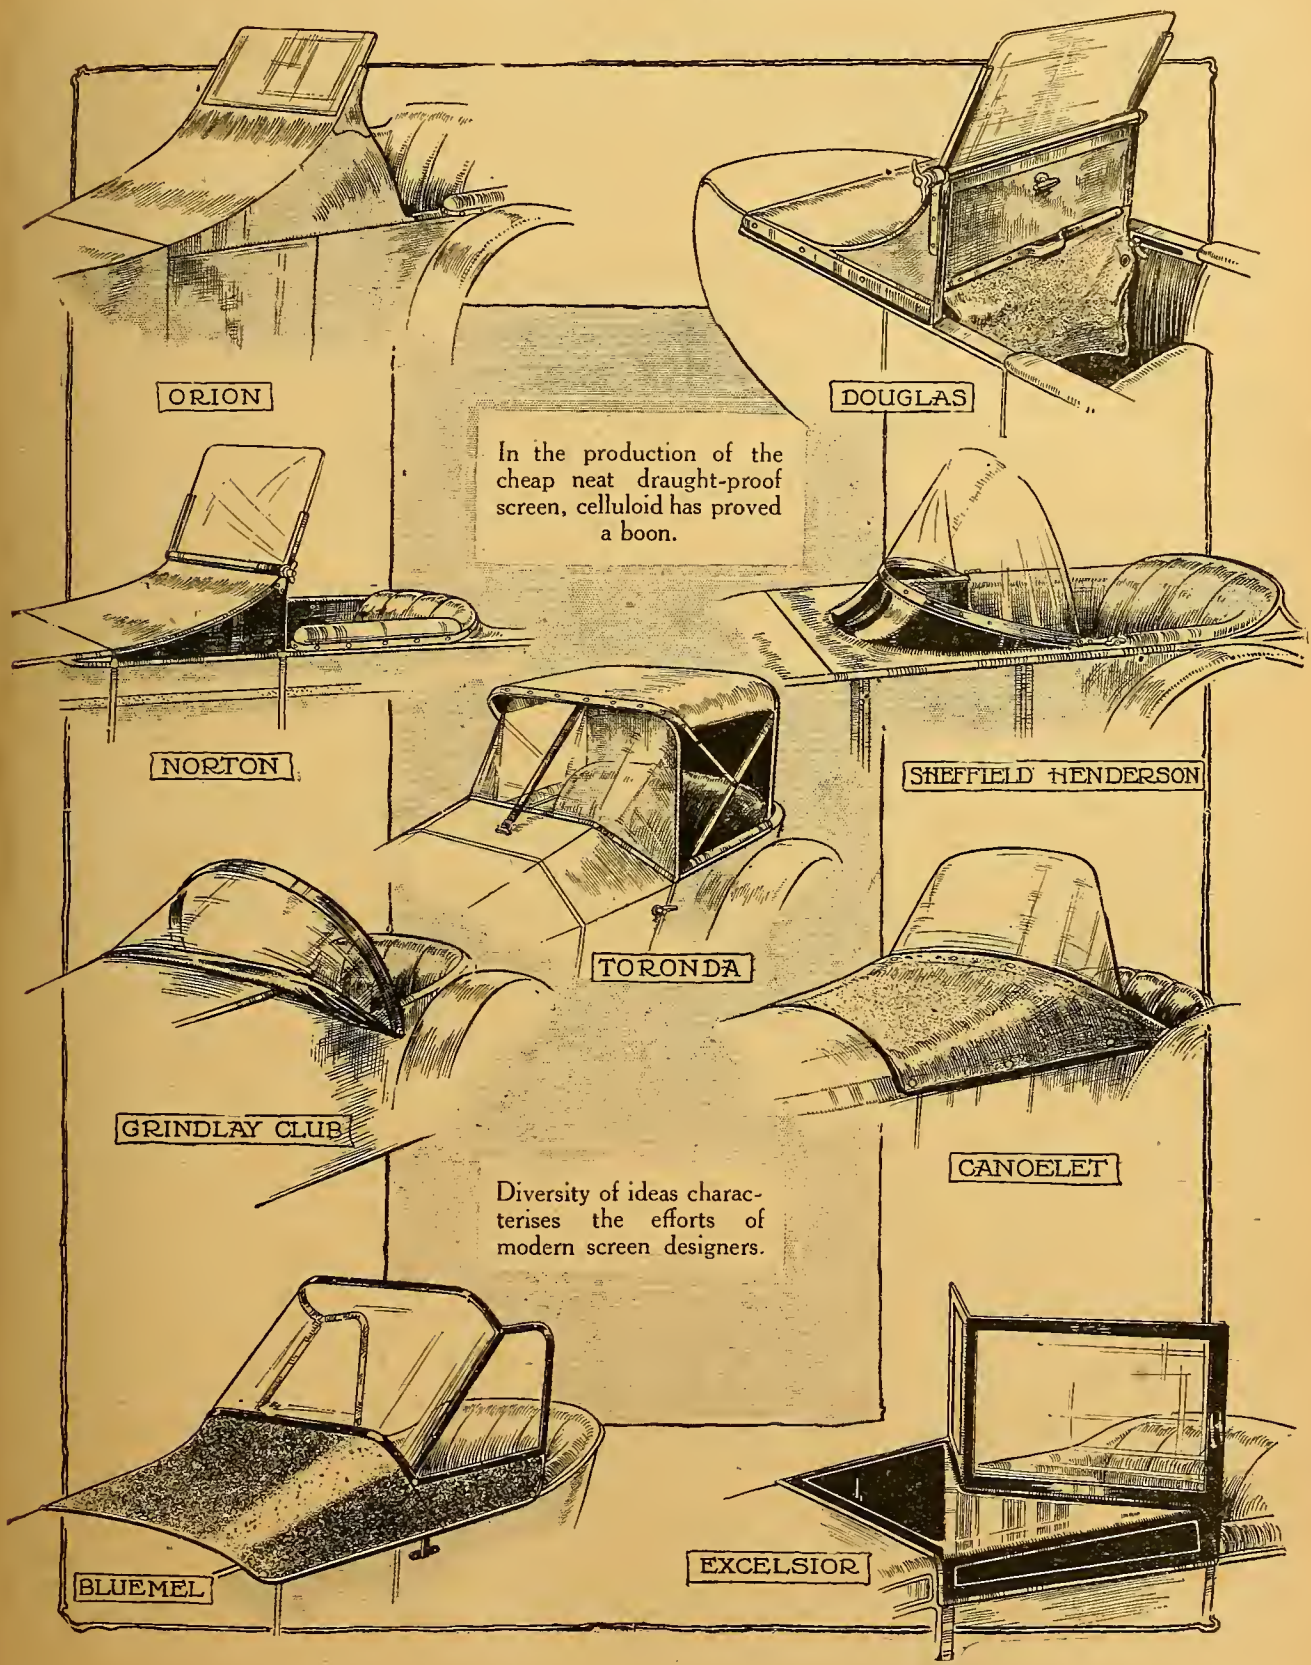
"TRACING TROUBLES" REVISED.

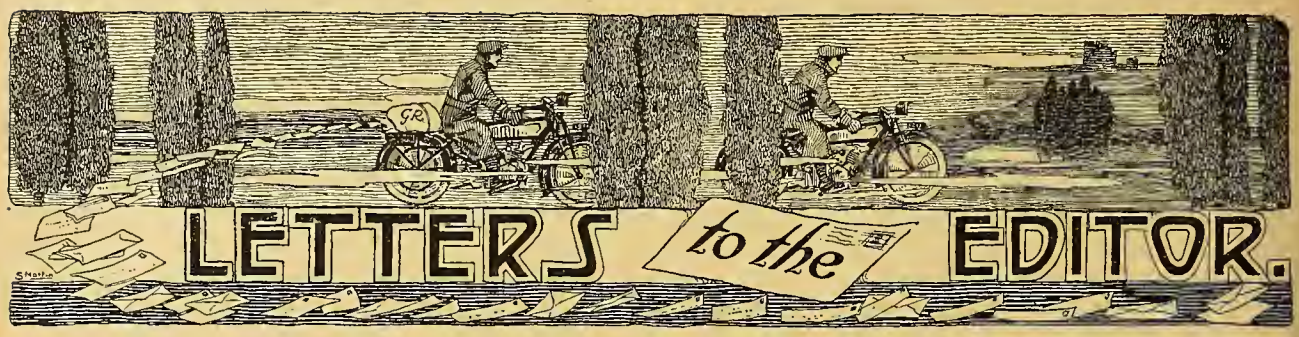
THE well-known and popular handbook published by Iliffe & Sons, Ltd., Dorset House, Tudor Street, E.C., under the title of "Tracing Motor Cycle Troubles"—a title which by constant reference has been curtailed to "Tracing Troubles" by its many users, has undoubtedly filled a definite requirement of the motor cycle fraternity. But the motor cycle industry has changed with the times and literature dealing with the pastime must necessarily change as well. With this object in view—that of keeping abreast of recent developments—an entirely new and revised edition of this little handbook has been completed and is now obtainable at the usual price (2s. net). This is the fifth edition, and many new features have been incorporated, so that the motor cyclist who relies upon it to extricate himself—or herself quite frequently nowadays—may not be disappointed. Two pages in front of the book are devoted to illustrating the quickest and most satisfactory way of making use of the information it contains.

MODERN IDEAS IN SIDECAR SCREENS.



SOME EXAMPLES AT PRESENT IN FAVOUR.





The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

TOO MANY GOLD MEDALS?

Sir,—After reading your account of the A.C.U. Six Days Trials, I am convinced the event is as *useless* as the organising body is to the *average motor cyclist.*

I read that A——, with a badly leaking tank on Brooklands, wins a gold medal; and now the makers claim a fine success. If my tank leaked after six days or six months I should be disappointed, to say the least of it.

B—— breaks a valve but gets a gold medal. I quote just two of the many examples in your report.

Mulhouse, Alsace. D. F. BRAND.

FUEL CONSUMPTION OF TWO-STROKES.

Sir,—I own a 211 c.c. Velocette (1921 model). It has not yet been touched with a key except for decoking. I get 130 to 150 m.p.g. from it, and the B. and B. carburetter has not even been cleaned yet, as I believe in leaving things alone when giving satisfaction.

Leeds. HUMPTY DUMPTY.

Sir,—As a well-satisfied Allon rider I cannot let "Old Bill's" letter pass without comment. I purchased last spring a 1922 model fitted with an Amac carburetter with 27 jet. The m.p.g. was 75, so I reduced the jet to a 25 and the mileage increased to over 100, at which figure it still stands. The machine also runs much better. ENN-ENN.

Retford.

Sir,—We are surprised to see the low mileages as quoted in your Correspondence columns, because we have in this office several spontaneous letters from people with whom we are not even personally acquainted claiming as much as 180 miles per gallon on absolutely standard Connaughts.

From 130 to 150 m.p.g. is quite a common mileage, which is borne out by some scores of spontaneous letters from—in some cases—novice drivers.

THE WARLAND DUAL RIM CO., LTD.

Sir,—I was very interested to read the remarks of "Old Bill" on the fuel consumption of his machine, and I am just as astonished to learn that he can only obtain 70 m.p.g. I am the owner of a fine machine of the same name as my "nom de plume," and without special tuning am obtaining 105 m.p.g. on short runs. On a recent tour of 364 miles last Easter I accomplished 114 m.p.g. on the outward journey and 125 m.p.g. on the homeward—measured exactly by a Bonniksen speedometer and checked by an A.A. route.

My carburetter is a B. and B. (not tuned for consumption), jet number 32, petrol level slightly lowered; average speed (182 miles) 24 m.p.h., and on the same carburetter setting have obtained 45 m.p.h. on the level.

Birmingham. "IVY THREE."

Sir,—Some of your readers find two-strokes thirsty and want the remedy. I have ridden five machines in three years. My first was a Levis, which gave 100 m.p.g and would have given more with a smaller jet. But being a timid novice I left the carburetter alone and put up with bad four-stroking for six months. Two others were of a well-known engine in different makers' cycles and both bad. Now I ride a Velocette and average over 150 m.p.g. I have averaged over 128 m.p.g. from the time it was new. These two good machines are quite as powerful and reliable as the slightly larger ones that were less satisfactory. The best machines cost more at first, but not so much as heavy petrol bills and numerous petrol saving devices. LEVELOCE.

Tewkesbury.

AMAZING LIGHTWEIGHTS.

Sir,—Two or three weeks ago I went from Chelmsford, Essex, via Peterborough, Stamford, Grantham, Newark, Selby, York, Pickering, to Scarborough in 10½ hours on my 1919 Hobart-Villiers. Coming back by exactly the same route a fortnight later, I did the journey in 9 hours. The distance is over 250 miles, and I had absolutely no trouble at all, not even tyres. "HOBART."

Chelmsford.

Sir,—"Ixion" seems to suggest that only the 1922 Levises are capable of keeping up the pace.

It is true that the 1922 models are a great improvement, but are they so vastly superior to the old models?

I own a 1915 211 c.c. single-geared model, on which the only alterations from standard are a drip feed in place of the original tap, and a Wex carburetter.

On August Bank Holiday Monday I returned from Herne Bay, a distance of 75½ miles (A.A. route), in 3 hours, *i.e.*, an average speed of 25⅛ m.p.h. The last 5 miles were through London Bank Holiday traffic. "R.E.T."

London, S.W.11.

Sir,—Recently I went from here (Wallasey) to Norwich on my single-geared two-stroke. I started at 4 30 a.m. and arrived at Norwich at 6 p.m. same day. The distance is 244 miles (I lost my way twice, which cost me eight miles and some time). I used about 2¼ gallons of petrol and just over one-third of a quart of oil. Three or four times I had to tighten the bolts of the handle-bar licence clip; apart from that I had no trouble whatever. Excluding stops for food and petrol, but including time lost through losing my way I averaged slightly over 21 m.p.h. I went at 30-35 m.p.h. for miles without stopping and the engine did not overheat at all. One day the following week I went to Gillingham, Kent (118 miles). Two days later I left Gillingham at 5 a.m. and arrived home (Wallasey) at 7.10 p.m., travelling through London, Birmingham, Wolverhampton, and Chester; the screw holding speedometer on handle-bar worked a bit loose, but beyond the mere details I have mentioned I had no trouble at all. (Gillingham—Wallasey is 240 miles.)

Total distance=824 miles.
Petrol used=9 gallons (£1 2s. 5d.).
Oil used=⅜ gallon (2s. 1d.).
Average cost per mile=0.357d.

It seems to me a very good performance for a single-geared baby two-stroke.

It is one of the little 'buses with the big heart (O.K. Junior). Usual disclaimer. F. TAYLOR.

NO BRITISH MOTOR CYCLES IN CUBA.

Sir,—I noticed "A.R.H.'s" letter in your issue of July 20th as to the British manufacturers' neglect of the foreign and Colonial markets, and can only say that exactly the same condition prevails in Cuba.

In Havana there are between four and five hundred Harley-Davidsons on the road and a large number of Indians, but I have not yet seen a single British machine, and the average Cuban does not know that motor cycles are manufactured in England.

This is the more to be regretted as Cuba should be a splendid field for the lightweight or medium-powered machine. The two American machines I have mentioned are both rather too heavy for many riders, especially for the middle-aged, but our choice lies between a powerful twin and nothing, as our home manufacturers seem entirely to have forgotten this beautiful and prosperous island.

I have no connection whatever with the motor trade myself, but I drive my H.-D. and sidecar every day in the year and am an enthusiastic motor cyclist. I shall be glad to answer any inquiries if anyone cares to hear further as to the motor cycling situation in Cuba.

Stores Department, KENNETH CARNE-ROSS.
United Railways of Havana,
Havana, Cuba.

UNIVERSALLY JOINTED SMALL-END BEARINGS.

Sir,—In his letter on page 300 Mr. Frazer states that he is experimenting with a universally jointed little-end bearing in his Levis engine, and I should very much like to hear at some future date, when experiments have been completed, whether or not the type of bearing in question would allow the piston to move round in the cylinder and alter the relation of the piston baffle to the transfer and exhaust ports. O.E.1382.

Birmingham.

[The normal type of universal joint does not permit a relative turning movement.—ED.]

THE LAST WORD IN MODERNISATION.

Sir,—Here are a few of the alterations which I made to a 1911 four-cylinder F.N. The forks were slightly shortened and their rake increased; the frame was cut down at the back and large tank bearers were brazed on to the middle tube; the carrier was altered and strengthened; a new tank was fitted, holding over two gallons of petrol and half a gallon of oil; wide valenced mudguards were fitted; foot-operated gear change and foot boards were arranged. The pedalling gear was utilised to work the back brake, one of the pedal cranks being now the foot brake pedal.

The automatic inlet valves were converted to the mechanical type; a Best and Lloyd mechanical pump was fitted on to the end of the camshaft, feeding the engine with oil through a sight drip feed on the tank. A copper exhaust manifold was made with a straight through pipe; the exhaust lifter was scrapped. A Binks carburetter greatly improved the running and consumption. A sidecar body was built up on ash hoops, the long pieces of wood being dark coloured and light coloured alternately. The two ends are dark, the whole being varnished with a light body varnish.

Most of my knowledge of motor cycles and their engines I have gathered by reading *The Motor Cycle*.

I am still patiently waiting for some concern to turn out a sports four-cylinder about "6-7 h.p.," with overhead valves driven by overhead camshaft, shaft driven, with a 3 to 1 top gear. It might interest some manufacturers to know that a four-cylinder F.N. (1911-12) only weighs 208 lb.

L. DESOUTTER.

SUGGESTIONS TO BRIGHTEN THE EXETER RUN.

Sir,—It was suggested after last year's run that if a gold medal in the London-Exeter Run is to retain its old prestige, the conditions governing this award must be considerably increased in severity. As a past and prospective participant, I venture to put forward for discussion the following suggestions :—

(1) The time allowance might be lessened to five minutes from schedule, early or late. This would relieve the tedium of the homeward journey, and put a premium upon sustained reliability of running.

(2) The non-stop sections might well be extended, *e.g.*, Chard-Honiton, and more particularly, Sidmouth-Peak, since several failed on Peak last year but lost no marks at the check at the top.

(3) A timed hill-climb might be included, as in the Land's End run; but, if so, the "baby" and 250 c.c. machines could hardly be expected to attain the same speeds as their 350 c.c. brethren. I believe that out of the sixteen machines of under 300 c.c. that were entered in the last Land's End Trial, only "Pa," on "Pa's" Levis, managed the 15 m.p.h. up Porlock that was expected from the "under 350 c.c. class." In view of the increasing popularity of the 100 c.c. per h.p. rating, would it not be fitting to have the points of division at 300, 400, and 600 c.c.?

In the first class there would be the "hot" 247-250 c.c. J.A.P. and Levis machines, and such "utility" mounts as the 293 c.c. Connaught, 292 c.c. O.K. Junior, 269 c.c. Villiers, and 292 c.c. Allon; in the second, the 349 c.c. A.J.S. 349 c.c. Raleigh, and the host of 350 c.c. J.A.P. and Blackburne-engined makes; in the third, or 600 c.c. class, we should find the sports Triumphs, Sunbeams, and Douglasses, along with "utility" models such as the 550 c.c. Triumph, 557 c.c. B.S.A., 592 c.c. Lea-Francis, and 598 c.c. Precision.

The "4" Norton (633) would be elbowed into another class, but it can very well look after itself!

Lastly, might not riders of similar machines be listed to ride together? It would be interesting for them, for spectators *en route*, and for pressmen to differentiate between the performances of the outwardly similar mounts. What do others think? FIDO.

Oxford.

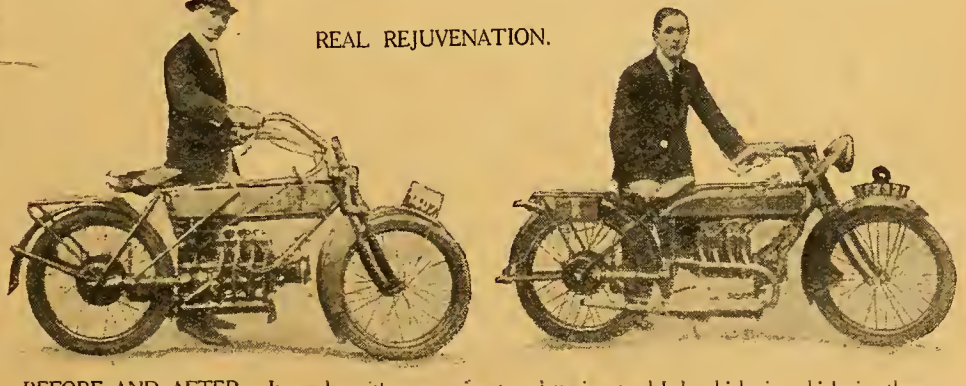
FUEL CONSUMPTION OF A LUXURIOUS SIDECAR.

Sir,—As the owner of an old Clyno sidecar outfit, I have been very pleased to see that the Clyno Company is again a going concern.

My present machine is a 1916 W.D. model, which I bought second-hand in the high price period following the war. Although it had had very rough treatment and hard usage, I am very satisfied with it and think that for slogging hard work year in and year out the Clyno productions want a lot of beating.

I have recently concluded a holiday in Cornwall and Devonshire from London. I covered 850 miles with only one stoppage for a puncture. The country involved a great deal of second gear work, the human freight was 18 stone, luggage for two, spare wheel, and a very heavy sidecar body.

REAL REJUVENATION.



BEFORE AND AFTER. It needs neither arrowing nor lettering to label which is which in these photographs of an ingenious conversion, outlined in the accompanying letter from Mr. L. Desoutter.

Yet for the whole tour the petrol consumption was 58 miles to the gallon, which I consider very good for such an old machine. No attempt was made to save petrol.

If ever I am in a position to cut the loss and get a new machine my inclination would be for one of the new Clyno outfits. If the necessary bank balance were available, I should, however, be torn between this and such a light car as the Rover. I consider a motor cycle a more sporty vehicle to drive, and should probably always hanker after it, even if I had a car. One thing I object to is having to dress in special clothes for a motor cycle. The real bed-rock consideration is, however, running expense.

I was, therefore, horrified to read in your article that the consumption on the Clyno on your trial trip worked out at the appalling figure of 35 miles to the gallon. Even allowing for the fact that it had not been specially tuned, this is very high. Most machines in the hands of the average rider lack, or soon get to lack, special tune. My present old outfit is anything but perfect. The Rover light car does, I believe, 45 m.p.g. The consumption on light cars appears to be creeping down, whereas that on high-powered and heavy but comfortable sidecar outfits steadily creeping up. When the two approximate to the same figure, motor cycling will lose many of its adherents. AN OLD CLYNO.

Chelsea.

Sir,—Referring to "Road Tests of New Models" dealing with the Clyno sidecar outfit, I was particularly interested in this article, as I am fortunate enough to possess one of the few machines that were turned out before production ceased in 1920. I entirely agree with your contributor on most of the points mentioned, but cannot understand his experience with petrol consumption.

I have driven my outfit a total of 14,000 miles, and on *no occasion* has the consumption been heavier than 50 m.p.g. Using pure benzol with 32 (Amac) jet and Bowden extra air, I have succeeded in reaching 78 m.p.g. with 3 up, and can definitely say that the average mileage on petrol is in the neighbourhood of 55 to 60.

I agree with your criticism of the front brake, but do not think that you give sufficient prominence to the excellence of the spring frame and sidecar wheel. These two points, in my opinon, raise the outfit to a level far above any competitor. My spring frame is untouched, and after 14,000 miles shows no sign of wear. Usual disclaimer.

A. E. COPE.

CANCELLATION OF CLUB EVENTS.

Sir,—Mr. E. C. Gordon's complaints in your last issue with regard to postponement and cancellation of competitions, give rise to several interesting points.

As one who has had some slight experience or trials organisation I cannot say that I consider it wise to run a competition in which the minimum number of entries fixed by the committee is not exceeded, but agree that it is up to the organisers to notify entrants at least a week before the date if the event is to be cancelled or postponed.

Perhaps Mr. Gordon has never been intimately connected with the running of a competition. Few, but the people who *do* these thankless tasks, realise the enormous amount of time and labour incurred in merely selecting a 100 mile course—not to mention money, which in most cases comes from the pocket of the luckless official!

As a case in point, I spent four complete week-ends in mapping out a course of 120 miles, covering no fewer than 800 miles, at my *own* expense. A lot of time was also spent drawing up details. Two valuable trophies were put up—also medals. With what result?

From a membership of over 130 only seven entries were received, representing two committee men, three "pot-hunters," and two *bona fide* club members.! Two offers of assistance were received, for a course on which at least twenty observers were required.

Now, would Mr. Gordon, as a member of this particular organising committee, carry this trial through, as he advises in his letter? Would he be prepared for a beggarly seven entries (one or two of which might well be non-starters!) to "arrow" a course of 120 miles, or try to persuade twenty unwilling people to act as observers, etc., miles from anywhere, and do all the other "little" jobs which fall to the lot of a trials organiser? I think not!

Mr. Gordon states that by running an event, however small the entry, it shows "consideration for the entrants." Now that is just the average club member's view! He considers himself, and his *own* convenience *always*—going "full throttle" to see what he can get *out* of the club, not what he can put in. What consideration do the officials of any club get—usually busy men who give up all their leisure for the benefit of others? None at all—not even support of the events they have worked so hard to organise!

It is useless to say "to run an event . . . and avoid an event of that nature in the future," as I fear in the majority of clubs ideas would soon become exhausted! It is also pretty obvious that, as far as possible, the entry fees of any one event should cover its expenses, or the club would soon be bankrupt.

And surely a *sportsman* could not feel very gratified to win a trophy from a miserable six entries!

So I am convinced that unless a sufficient number of entries are received for a competition, it is far better to cancel or postpone it, in the interests of the club, organisers, and of the entrants themselves.

"FED-UP."

Hertfordshire.

DEPOSITS ON OVERHEAD VALVE STEMS.

Sir,—"Ixion" mentions a curious experience which a reader has had after 1,000 miles' running with a certain o.h.v. engine. The engine in question appears to be a four-valve Triumph. As a rider of a similar machine I have had the same experience and put it down to the following cause:

With the standard carburetter as fitted by the makers, the gauze covered air intake is very close to the saddle tube. On a dusty day I have found the small part of the tube opposite the air intake is free from dust, although the rest of the machine is covered. The dust appears to be sucked from the tube and settles on the inlet valve stems, when, after being moistened with the damp vapour of the gas, it gets hardened by the heat of the engine.

In my case the deposit had to be cut off with a knife and resembled very hard rubber or vulcanite. I have mentioned this particular engine simply because it happens to have the same trouble as your other reader, who does not state any particular machine.

Apart from this, the machine I have is splendid and would not be given up in preference to any other make. Has "Ixion" had this peculiar trouble with the o.h.v. Triumph he often mentions in his weekly article? I was interested in this article, and would like to know from other readers if they have found any way of overcoming the trouble.

S. Wales. INTERESTED.

TEMPERAMENTAL ENGINES.

Sir,—I have read with interest the theories propounded by various readers on the cause of the temperamental behaviour of the Rudge engine. Personally, I do not believe one of your correspondents, including that almost super-man himself, "Ixion," has yet lighted on the correct solution. This contribution is in reply to "I.O.M.'s" letter.

My machine is a 1920 I.O.M. T.T. Rudge, but instead of the regulation Senspray, it is fitted with a B. and B. attached to the induction pipe by means of about a foot of suitably bent copper piping. *The air intake projects from the near side of the machine.*

This machine seems to be afflicted with the complaint similar to that experienced by your other correspondents, for at times it runs beautifully, at others it sulks a little, and occasionally—very occasionally, about 50 yards in a 100 miles—it super-Rudges, as "Ixion" terms it. Altitude does not make any difference, for it behaves the same whether on the moors to Appleby and Penrith or on the main road south. One of its super-Rudging fits nearly terminated in a violent ending to myself, for it occurred when I was rounding a bend at about 20 m.p.h. Without any warning of any kind it suddenly—in the true sense of the word—dug out an extra 15 m.p.h. from somewhere, and I found myself doing a slide along the grassy side of the road.

"I.O.M." attributes the cause of this to the alternate pumping and suction effect on the carburetter through its

air intake being almost flush with the plane surface of the oil tank. Now, my air intake is near to and flush with nothing except the outside atmosphere, and still sulkiness and super-Rudging occurs. I have no solution to offer; but perhaps the Rudge people themselves would contribute something towards this topic. O.P.Q.
Durham.

Sir,—I have fitted up a quart oil tin as oil tank on rear down tube of my 292 c.c. Omega-Jap, owing to failure of original tank, and had an aluminium tube over air intake of B. and B. carburetter, reaching to within about 1½ in. of the oil tank; with this arrangement my speed down a certain gentle slope was 45 m.p.h. Recently I fitted a short trumpet-shaped air intake, which is about 6 in. from tank. Immediately my speed rose to 50 m.p.h. down the same slope. This is with gauze in air intake, 26 jet, 6⅔ : 1 gear.
H. P. BOWLER.

EASY PAYMENTS.

Sir,—I regret an error made in typing out my letter that appeared in your issue of September 7th. "Firm B requires a deposit of ten per cent." should read "Firm B requires a deposit of a quarter." H. G. LE MESURIER, Lt.-Col.

CLUTCH SLEEVE ADJUSTMENT DIFFICULTIES.

Sir,—Can any reader tell me how the adjustment on a Rudge-Multi clutch is made so that the $\frac{1}{16}$in. end play is obtainable in the brass sleeve? I have just fitted all new parts, but cannot get the end play mentioned; in fact, I cannot get any at all. J. S. O. SMITH.

PRIVATE OWNERS IN BIG TRIALS.

Sir,—I notice in the article "Following the Blue Trail," "Tangent" asks, "Where were the private owners?"
I think the answer lies in the expense of such events. During this season I have spent some £80 in supporting some of the more prominent reliability trials, the cost of the Six Days event working out at about £25.
While it is very gratifying, etc., to win gold medals on equal terms with the trade, it cannot be expected that many private owners will be able to shoulder this expense. Personally, after I have had a shot at the Scottish Six I shall leave these expensive events to the trade.
In fact, in a trial like the Six Days event, the results of which may guide the buying public, it might be better to restrict the entries to three machines of a class from each manufacturer. These machines would be driven by the best drivers, and results could then be fairly compared. Under the present system a private owner may, through bad driving or inexperience, easily spoil the "average" success of the particular make he rides. MATCHY.
London.

[There is a good deal in what our correspondent says when applied to the A.C.U. Six Days Trials; but it would be fatal to exclude the private owner from any other event. —Ed.]

THE IMPORTANCE OF FRONT SPRINGING.

Sir,—I have no letters of distinction after my name but, having been a rider, and a reader of *The Motor Cycle*, for the last fifteen years, I should like to express my opinion *re* springing.
I have found that the speed of a machine over a bad road is invariably governed by the adaptability of the front springing to absorb road shocks. The average spring forks are, in my opinion, totally inadequate in this respect; this is practically admitted by spring frame enthusiasts.
I have never found the speed to be governed by vibration felt on the saddle. Most modern saddles actually have *more* range of movement than the spring fork, which is always threatening direct action to the frame over a bad road. I maintain that, however much the rear springing, only, of the frame is improved, it will not enable a higher speed to be attained unless the front springing is improved *pro rata*. Both wheels should have up and down movement of at least 4in.; then we can ride without the fear of our elbow joints getting red-hot, and other parts of the anatomy a "plum red colour" (with apologies to "Ixion").
H. E. CLEEVE.

COMPETING UNDER DIFFICULTIES.

Sir,—With reference to your recent paragraph under the above title, surely to the man in the street the performance of B. Browning on a Royal Ruby machine taken straight from stock in completing the course in the Six Days Trials is worthy of special notice and is, in my opinion, a better performance than many competitors who just managed to gain a gold medal. I think Six Days Trials with all machines taken straight from the crate would give the public a real test of reliability. "JUSTICE."
N. Shields.

GOGGLES FOR THE SPECTACLED RIDER.

Sir,—I would like to reply to the letter of "Awahawahawoo," since the trouble he has described is very common, and I have many times had similar complaints brought to my notice.
First of all I would recommend him to remove the glasses and smash them. If the goggles are made for curved or bent glasses, destroy those too. Now purchase a pair of good-fitting goggles with removable windows, which do not show any "cords" or streaks across the glass. Take these out and send them to a working optician (not an eye-testing spectacle supplier) and ask him to re-polish both sides of the glasses flat and fairly parallel, then replace them in the goggles. Your eyes will then accommodate themselves immediately for natural vision; trees and houses, etc., will appear in their natural shapes too.
There is not one goggle in ten thousand fit for any one to wear, and in consequence thousands of women and men are continually doing permanent and increasing damage to their eyes.
I would recommend this subject to parents who supply these things to their children. The bad effect can be very slight and unnoticed even by discriminating adults when goggles are worn only for short durations at a time; but no less sure and certain is the result in after years.
The lamp and filament makers give us bad and unsuitable lamps because they do not seem to trouble about the underlying principles of their wares, and in consequence we are troubled with "glare." In like manner the goggle maker knows and cares very little about the principles of vision; his object is to sell goggles at a cheap price. One sometimes feels that it is almost a criminal neglect in this case.
London, N.19. ROVER.

SUMMARY OF CORRESPONDENCE.

Mr. W. D. Riley, 141, High Street, Redcar, Yorks, complains that he loaned a new spare driving chain to a stranded motor cyclist and that it has not been returned.
Over the nom de plume of "Interested Member," a correspondent asks if the A.C.U. publishes a detailed balance-sheet giving salaries paid to permanent members of its staff.
Various readers send us newspaper cuttings, instancing fines for dangerous driving, etc., which in their opinion are excessive.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CLUB NEWS

Sutton Coldfield and North Birmingham A.C.

A hill-climb will take place at Angel Bank on Saturday. All the usual classes are included in the programme, and a number of special awards are being offered.

Scottish Western M.C.

Open speed trials will be held over a half-mile course near Glasgow on Saturday next. Twenty-four classes are included in the programme.

Liverpool M.C.

Two important events, the Reliance Cup Trial and the Liverpool-Carlisle-Liverpool Trial, are announced for October 4th and September 30th respectively. A large number of challenge awards will be open for competition. Entries and any communications should be addressed to Mr. H. R. Caldwell, 14, Wood Street, Liverpool.

Redhill and Reigate M.C.C.

Fine weather favoured the one day inter-club team trial held on September 10th. Of the eight teams which attempted the very spoiling 130-mile course two only were intact at the finish. Provisional results show that the team prize was won by the Redhill and Reigate team, made up as follows:—

P. Cunningham (555 P. and M. sc.).
V. F. Long (976 Excelsior sc.).
R. Clapham (494 Douglas).

Heaton Moor M.C.C.

A challenge trophy trial was held on September 3rd over a very tricky course, including an ascent of Jenkin's Chapel Hill, Saltersford. Solo machines of 350 c.c. and under had the alternative of Pym's Chair, and all sidecars had to ascend Pym's Chair only. Result:—F. Bamford (499 Sunbeam), challenge trophy and gold medal; H. Moore (998 R. Ruby sc.), silver medal; J. Corcoran (499 Sunbeam sc.), silver medal; F. Slack (499 Sunbeam), bronze medal. Special Award:—Miss E. Foley (349 A.J.S.), meritorious performance.

Peterborough M.C.C.

The club held speed trials on the Old Race-course Road, Stamford, on a recent Thursday, invitations being extended to the Spalding and Stamford Motor Cycle Clubs to take part in the events, and accordingly there was an excellent entry. The contests were over a straight, level half-mile, and some good times resulted. A cup, presented by Captain Carnt for annual competition, was won by O. Collier (492 Sunbeam), who made the fastest time of the day at a speed of 75 miles per hour. Silver medals were awarded to the winner in each class, and a certificate was given for second place. Results:—

Standing Starts.

Not Exceeding 350 *c.c.*—(1) J. W. Turnill (349 Royal Ruby), 36½ secs.; (2) Le Bœuf (349 A.J.S.), 38⅘ secs.; (3) E. W. Greenwood (349 A.J.S.), 39 secs.

Not Exceeding 550 *c.c.*—(1) O. Collier (492 Sunbeam), 31½ secs.; (2) H. Robinson (492 Sunbeam), 32⅕ secs.; (3) A. Stapleton (492 Sunbeam), 32⅗ secs.

Unlimited.—(1) H. Robinson (492 Sunbeam), 31½ secs.; (2) O. Collier (492 Sunbeam) and G. North (496 Brough), 32⅗ secs. (tie). In the run-off Collier secured second place, his time being 30⅕ secs.

Flying Starts.

Not Exceeding 350 *c.c.*—(1) J. W. Turnill (349 Royal Ruby), 28½ secs.; (2) Le Bœuf (349 A.J.S.), 28⅘ secs.; (3) G. E. Henson (350 Coventry Eagle), 30½ secs.

Not Exceeding 550 *c.c.*—(1) O. Collier (492 Sunbeam), 24 secs.; (2) H. Robinson (492 Sunbeam), 24½ secs.; (3) G. North (496 Brough), 24½ secs.

Sidecars and Three-wheelers not Exceeding 1,100 c.c.—(1) H. Robinson (492 Sunbeam sc.), 35½ secs. (2) G. Gaunt (976 Matchless sc.), 37⅖ secs.; (3) G. E. Henson (997 Indian sc.), 48⅘ secs.

Solo Machines, Unlimited.—(1) A. Stapleton (492 Sunbeam), 24½ secs.; (2) H. Robinson (492 Sunbeam), 24⅖ secs.; (3) G. North (496 Brough), 24⅘ secs

Week-End Club Events.

Sept. 21st.—Norfolk M.C. and L.C.C. Speed Trials.

Sept. 23rd.—Sheffield and Hallamshire M.C. and L.C.C.—Reliability Trial.

Sept. 23rd.—Bristol M.C. and L.C.C.—Formula Hill-climb.

Sept. 24th.—Manchester M.C.—Social run.

Sept. 24th.—Colne and District M.C.—Run to York.

Sept. 24th.—Halifax and District M.C. and L.C.C.—Run to Linton Falls.

Sept. 24th.—Atherton and District M.C.C.—Run to Leek.

Sept. 24th.—Leeds M.U.—Reliability Trial.

Sept. 24th.—Sheffield M.C.C.—Run to Elksley.

Sept. 27th.—Reigate, Redhill and District M.C.C.—Hill-climb.

Sept. 28th.—Aberdare and District M.C.C.—Speed Trials.

Sept. 28th.—Gloucester M.C. and L.C.C.—Visit to B.S.A. Works.

Sept. 28th.—Worcester M.C. and District M.C.C.—Visit to A.J.S. Works.

Aberdare and District M.C.C.

Brecon Beacons is the venue of the club's annual speed trials, arranged to take place on the 28th inst. Open and closed classes for most types of machine are included in the programme, and a number of handsome prizes will be awarded.

Sunderland and District M.C.

Thirty competitors entered the sporting trial for the Northern Motor Exchange Cup and the Turvey Shield, held recently over a 40-mile course, starting from Sleights. Fifteen finished, the winner being J. Joynson (346 Francis-Barnett), second R. Scoon (Jowett car), and third S. Bell (490 Norton), who won the Manufacturers' Cup and Turvey Shield. D. Hall (249 Velocette), who secured fourth place, was awarded a special gold medal for his good performance on the lowest powered machine; and a similar award was made to the fifth man, T. W. Toovey (490 Norton sc.).

Lewes and District M.C.

An average gradient of about 1 in 9 over half a mile of winding road was chosen for the hill-climb held on the 3rd inst. at Sharnden, Mayfield.

300 c.c. (Two-strokes).—1, R. Green (249 Velocette), 45⅕s.; 2, S. Dunford (225 Royal Enfield), 49⅖s.

300 c.c. (Lightweights).—O. E. G. Brook (269 Verus), 45s.; 2, W. J. Hylands (269 Verus) and R. Green (245 Velocette), 47s.

350 c.c. (Lightweights).—1, S. Dunford (269 Verus), 34s.; 2, L. P. Greenwood (348 Royal Ruby), 41⅗s.; 3, E. G. Brook (269 Verus), 42⅖s.

500 c.c. (Solo).—1, C. Volk (494 Douglas), 33s.; 2, R. Green (490 Norton), 34⅕s.

Unlimited (Solo).—1, C. Volk (494 Douglas), 33⅖s.; 2, S. Dunford (269 Verus), 34⅕s.; 3, R. Green (490 Norton), 35s.

Unlimited (Sidecars).—1, S. Dunford (490 Norton sc.), 46⅖s.; 2, S. H. Colbourne (989 Harley-Davidson sc.), 48⅘s.

The gold medal awarded for the fastest time of the day was awarded to C. Volk (494 Douglas), who covered the distance in 33 seconds, which incidentally was only 1 second better than S. Dunford (269 Verus).

Central Cornwall M.C.

Beautifully fine weather prevailed at the hill climb held recently on Greymare Hill, near Bodmin Road, and there was a very large attendance of motorists from all parts of the district, the course, a measured half-mile, with several tricky corners, being lined with spectators. Fastest time of the day was credited to R. Dyer, on a New Imperial, in 52⅘ secs. The results, which have to receive the confirmation of the committee, were:—

Unlimited Sidecars.—H. F. Benny (499 Sunbeam sc.), 1 min. 9 secs.—walk-over.

300 *c.c. Solo.*—(1) R. Dyer (248 New Imperial), 55⅖ secs.; (2) J. W. Jenkin (248 Sparkbrook), 1 min. 9⅕ secs.

650 *c.c. Sidecars.*—H. F. Benny (499 Sunbeam sc.), 1 min. 4⅗ secs.—only competitor.

350 *c.c. Solo.*—(1) C. G. Whitlock (349 A.J.S.), 55⅘ secs.; (2) R. Dyer (248 New Imperial), 56 secs.

Unlimited Solo.—(1) G. R. Symons (492 Sunbeam), 52⅕ secs.; (2) H. L. C. Jennings (490 Norton), 57 secs.

500 *c.c.*-650 *c.c. Solo.*—(1) G. R. Symons (492 Sunbeam), 53⅓ secs..

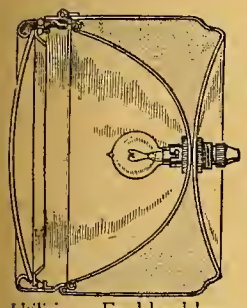
500 *c.c. Solo.*—(1) R. Dyer (248 New Imperial), 52⅘ secs.; (2) G. R. Symons (492 Sunbeam), 53 secs.; (3) P. Phillips (490 Norton), 54⅕ secs.

IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

Effective Lamp Conversion.

NOT being satisfied with the light from an acetylene head-lamp converted to electric lighting by means of a lamp in the place of the burner, F.M. (of Oldham) decided to remake it as a thorough-going electric head-lamp.



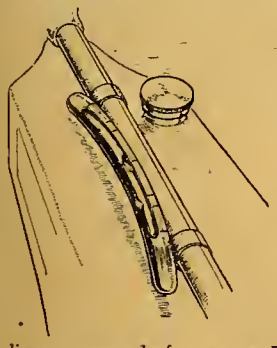
Utilising a Ford head-lamp reflector in a converted acetylene lamp.

A Ford head-lamp reflector was bought new for 4s. 6d., and wire ($\frac{3}{32}$in. dia.) was put round the edge by a tinsmith for a few coppers. The back of the lamp was domed inwards until it touched the reflector, which was inserted from the front, a suitable hole for the lamp-holder being drilled.

Made up, it gives a light of great brilliance with a 6v. 8cp. gas-filled bulb, and has the advantage of adjustable focus by the lampholder. The lamp itself has a 6in. front and is described by its owner as of "make unknown."

Gradient Meter.

HAVING purchased an ex-R.A.F. clinometer, A.H.S., of Chichester, adapted it as a motor cycle gradient meter with very little difficulty. One end of the clinometer body was much longer than necessary, and was therefore sawn off and plugged with putty. Brass



A gradient meter made from an ex-R.A.F. clinometer.

clips and $\frac{3}{16}$in. nuts and bolts served for attachment to the frame top tube, above the tank. If the frame tube slopes compensation may be made by modifying the clips.

With the gradometer fixed and the bicycle level, the "level" bubble position was marked. The other graduations were then obtained by removing the gradometer and testing it on a board on a table. The board was packed up till the bubble came to "zero," giving level position, whence gradients up to 1 in 4 were obtained by further packing and the corresponding bubble positions marked. Two coats of Robbialac gave a good finish, and the graduations were scratched through to the aluminium clinometer case, showing white by contrast. The total cost was about 3s.

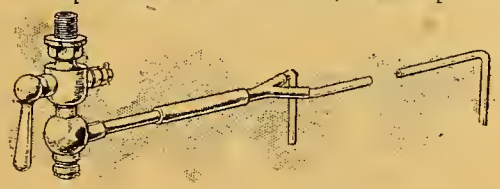
Care of Tyres.

RUB well into the tyre a mixture of equal parts glycerine and water, and dust over with French chalk. This mixture makes the rubber soft and pliable, and if applied once a month will prevent cracking or splitting of the rubber. I have found it extremely useful on my tyres.—R.J.P.

Injection Device for Twins.

STARTING troubles, in September, at any rate, should be independent of gummy pistons, but our summer weather is so arctic on occasion that an injection device may be considered as an all-the-year-round necessity, especially on big twins, which like a "thick" oil.

A Sheffield reader, borrowing his inspiration from the Zenith, fitted up a

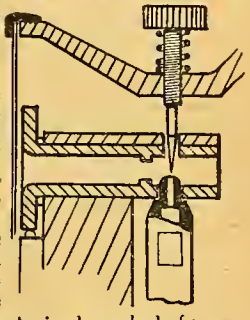


An idea for priming big twins.

Birmingham-made twin so that petrol injections could be made without recourse to loose squirts, oil cans, or bits of acetylene tubing. The items used were an injection tap with swivelling delivery pipe, a gas lamp brass Y piece, one bit of $\frac{1}{4}$in. copper pipe, and two pieces of $\frac{1}{8}$in. pipe. The tap replaced the tank drain tap, and the remaining items were so disposed as to bring a pipe over each cylinder compression tap. To get an even flow at both pipes the end of the shorter one is nipped up with the pliers, while to take the overhang weight the longer pipe is suitably wired or taped to the lower tank tube.

Variable Jet for a Senspray.

ALTHOUGH the Senspray carburetter is fitted with a device which increases or decreases the suction on the jet, so giving a permanently rich or weak mixture at will, C.B., a Glasgow reader, found that a variable jet was also an advantage. The materials used to construct this fitment were (1) a $\frac{3}{16}$in. screw with a knurled head, (2) a large gramophone needle, and (3) a small piece of coil spring to fit over the set screw.

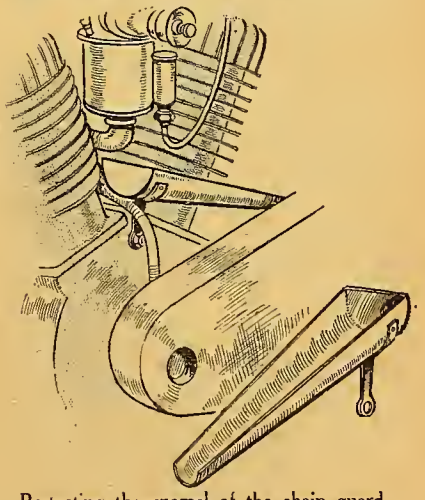


A simple method of transforming a single jet carburetter to a variable type.

The needle was soldered into a small hole drilled to the end of the set screw, and for the latter a hole was tapped in the carburetter body immediately over the jet. Drilling the vaporiser and jet to a loose fit for the needle completed the job.

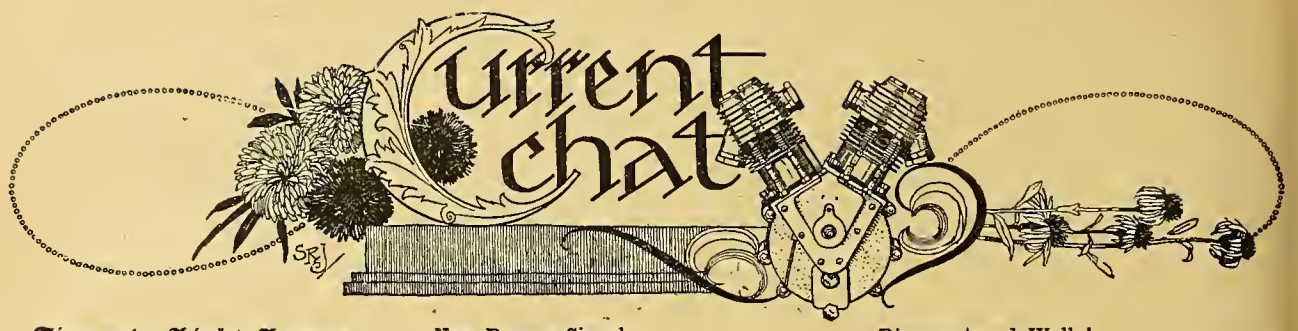
Preserving Appearance.

A DUTCH rider of an Indian (L.C.V., of The Hague) has devised the little fitting here described in order to protect the enamelled crank case and chain guard from the petrol drippings which result when the carburetter is



Protecting the enamel of the chain guard.

flooded. The fitting is a small tapered trough of sheet metal secured on a small stay held under the top crank case nut. The further end of the gutter leads the petrol overflow to a point behind the engine under the tool box and between the chain guard and oil tank.



Times to Light Lamps.

Sept.	21st	.. ..	7.31 p.m.
,,	23rd	.. ..	7.27 ,,
,,	25th	.. ..	7.22 ,,
,,	27th	.. ..	7.18 ,,

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Support for the 500 Mile Race.

Owing to the initiative of Mr. C. Holbeach, Weybridge residents, as announced in last week's issue, have petitioned against the abandonment of the 500 Mile Race. Up to the time of writing, 420 signatures have been received.

Disabled Drivers' Rally.

Last year's rally of disabled motor drivers is to be repeated on Saturday in the grounds of Capt. Woolf Barnato's house, "Ardenrun," Blindley Heath, South Godstone. The Junior Car Club and the Disabled Drivers' M.C. (48, Grosvenor Square, London, W.1), are the organisers.

A Sporting Event.

Single-gear enthusiasts are invited to enter the third annual trial of the Levis Athletic Club, to take place on the 30th inst. The event is unique in that only single-speed, direct belt drive machines are eligible to compete. Entries should be sent in, by September 22nd, to Mr. W. S. Banner, Levis Works, Stechford, Birmingham.

Exports Steady; Imports Down.

The statistics of our overseas trade in motor cycles during August, as given in the Trade and Navigation Accounts, are chiefly remarkable for the extraordinary fall in imports, the total value of machines and parts coming into this country last month being £2,959, compared with £12,066 in July, £12,756 in August, 1921, and £65,884 in August, 1920. The export figures, on the other hand, remain comparatively steady, £71,303 for August, against £77,901 for July, being a not unreasonable drop at this season of the year. Comparative tables are appended :—

MOTOR CYCLE EXPORTS.

	1920	1921	1922
	£	£	£
Value of machines	202,363	44,366	47,859
Value of parts ..	63,203	30,848	23,444
Total value	265,566	75,214	71,303

MOTOR CYCLE IMPORTS.

	1920	1921	1922
	£	£	£
Values of machines	51,618	1,823	714
Value of parts ..	14,266	10,933	2,245
Total value	65,884	12,756	2,959

New Danger Signals.

Road patrols of the A.A. now carry two red flags, which may be fixed as emergency warnings when temporary obstructions occur. In a number of instances they have already served to avert possible accidents.

Appreciation of Sportsmanship.

E. C. Barton, the Matchless sidecar driver in the Six Days Trials, who was injured by a following sidecar near Alms Hill, writes to express his appreciation of the manner in which other competitors stayed to help at imminent risk of losing their gold medals.

Sharing an Engine.

At the *concours Lepine*, an exhibition now going on at the Champ de Mars, Paris, originally founded for small inventors, kerbstone merchants who sell ingenious toys, and the like, there is one exhibit of interest to motor cyclists. It is an arrangement for attaching two ordinary pedal bicycles together with a small engine between them which drives on to the back wheels of both of them through a complicated arrangement of universally jointed shafts and belting. It is interesting but quite unpractical.

Dismount and Walk!

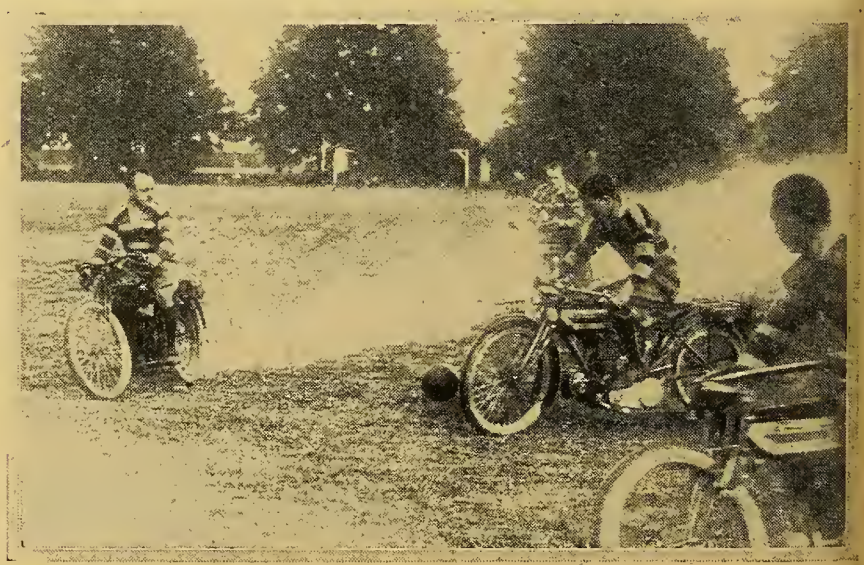
Motor cyclists passing through Aycliffe, near Darlington, should, according to a correspondent, dismount and push their machines past the constable on duty at a dangerous turning there.

Chameleon Motor Vehicle.

In a Ross silence prosecution, the offending vehicle was variously described as a cycle car and a car. Then, in his preparatory remarks to imposing the usual fine, the chairman talked about the noise of "these cycles."

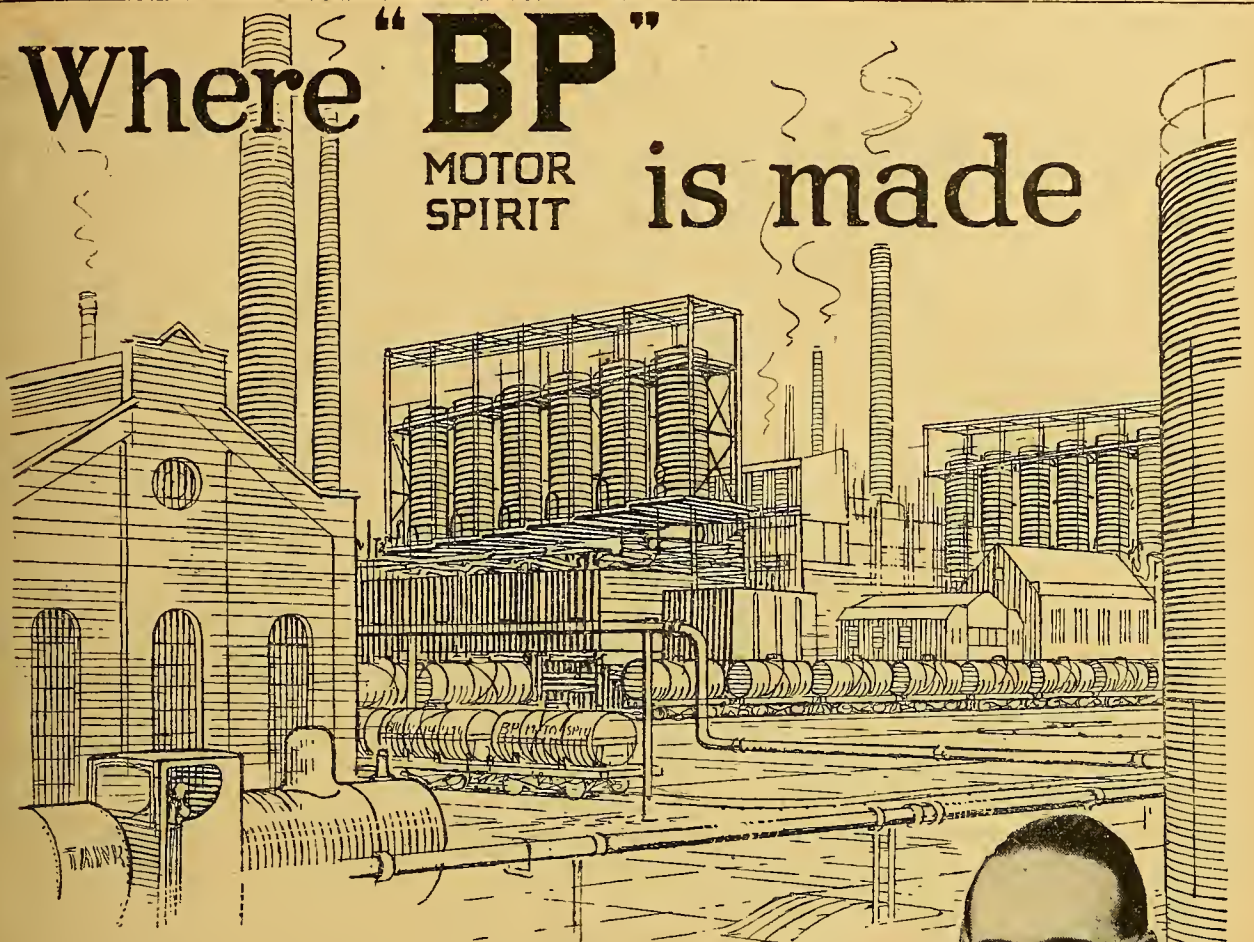
Faults and How to Find Them.

Drawn up several years ago, much on the same lines as "Tracing Motor Cycle Troubles," the little handbook known as "Faults and how to Find Them," which deals with the subject from the car-owner's point of view, has constantly been revised and brought up to date to meet the growing requirements of our ever-changing industry. The sixth edition of this book is now published by the proprietors of *The Autocar* (Iliffe & Sons Ltd., of Dorset House, Tudor Street, E.C., at 3s. 6d. net), with every section carefully modernised, some deleted, some added to, and not a few entirely new ones embodied.



WHERE SKILL AND STRENGTH ARE NEEDED. We do *not* understand that a game of motor cycle football is to be included as a final test in the next Six Days Trials. But there is no telling what the future holds in the way of original "tests." This capital speed picture, full of life and movement, depicts a scene at a recent Northampton fête

Where "BP" MOTOR SPIRIT is made



Llandarcy
(WALES)

THE great new refinery of the Anglo-Persian Oil Company Ltd. marks the highest development of modern refining practice.

Here "B.P." Motor Spirit is made from Persian Oil—one of the richest Crude Oils in the World – by scientific methods which ensure to the motorist the finest and most uniform spirit.

"B.P." is all British. It is made by a British Company employing British workmen and financed by British capital.

For "Upper Lubrication"

Has anything other than Miracle Oil ever acquired such an astounding list of successes to its credit in the course of a single season?

And—what is still more remarkable—what other product has ever met with such instantaneous success?

Miracle Oil was placed on the British market for the first time early this year.

Why is Miracle Oil so much in demand among the men that *do things?*

Miracle Oil gives efficient "upper lubrication." Do not confuse it with petrol dopes. Get a 3/6 can (enough to treat 16 gallons of petrol or benzole) at your garage to-day and see for yourself

One Third Lorries.

Practically 33 per cent. of the motor vehicles on the road in France to-day are lorries.

Mr. George Stevens Entertained.

On Saturday evening last Mr. George Stevens was welcomed back from his trip to the Antipodes by several well-known members of the trade. The entertainment took the form of a dinner at the Midland Hotel, Birmingham, at which Mr. Alec Ross presided.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

H. R. Davies' Latest Win.

Howard Davies, the well-known T.T. rider, is now the father of a daughter.

The Three-speed Scott.

A new three-speed Scott will be on exhibition at Olympia. The Squirrel, we understand, will remain practically unaltered.

Two-stroke Expert Wanted.

There is a vacancy in a prominent Belgian factory for an English two-stroke expert. The type of man required is one who is used to speed work and tuning.

Scarborough Speed Trials.

Next Saturday's speed trials at Scarborough have attracted an excellent entry, including G. Dance and several other well-known Midlands and South Country men, as well as Yorkshire and North Country riders.

Lightweight Sidecar Record.

An excellent performance was recently made at Brooklands by H. Le Vack on a 350 c.c. J.A.P. sidecar, in accomplishing the 10 miles (standing start) record distance at a speed of 62.74 m.p.h. This will be claimed as a world's record.

Motor Cycles to Carry a Rear Lamp.

At first it was thought that the proposed Lights on Vehicles Bill, referred to in our issue of the 7th inst., exempted solo motor cycles from carrying rear lamps. We are now informed by the Ministry of Transport that this was not intended, and that the reference "only one lamp . . . need be carried" is applicable to head lights only, other vehicles having to carry two.

Car Prices in 1923.

According to *The Autocar*, which journal week by week chronicles price reductions of 1923 model cars, 15 per cent. represents approximately the reduction in 1923 prices.

THE SPIRIT OF CARNIVAL.

CLUB events have a tendency to become serious, earnest affairs, and a safety-valve for members' enthusiasm becomes an increasing necessity. Of the several forms of serio-comic events the gymkhana is perhaps the most popular; certainly a better fun-provider than a well-organised gymkhana is hard to find.

The Birmingham M.C.C. third annual gymkhana, held on Saturday last, was no exception to the rule, and enthusiasm ran high among all concerned. The whole of the proceeds will go to charity.

The gymkhana was launched with a decorated parade, which traversed the main streets of Birmingham. The procession had a hearty reception from spectators as it wended its way to the Austin playing fields.

Motor Cycle Polo.

The opening event at the playing fields, prior to the arrival of the procession, was a motor-cycle polo match between the Birmingham University and the Austin Works; the teams were so well matched that after an exciting half-hour's struggle no goals were scored by either side. A large programme of amusing events followed, including such well-tried favourites as slow races, hairpin-course races for solo and sidecar machines, obstacle races, riding the greasy plank, and musical chairs.

POOR PROPAGANDA BUT EXCELLENT MAKE-UP. B. Dulsett caused much amusement with a sidecar faked to represent a crashed outfit, carrying damaged rider and passenger.

SCOTTISH TWO-DAY TRIAL.

Gruelling North Country Event. Worse Gales than Gradients during Run to Inverness.

The last rise of Cockbridge. A typical stretch of the route traversed on Saturday.

A dull, colourless sky, with every promise of an easterly "har" from the Firth of Forth, marked the commencement at 6-30 a.m. on Saturday, of what was to prove a most strenuous eleven hours for the Scottish Two-Day Trial competitors.

There were eight non-starters, seventy-five riders checking out. Trade teams were represented by:—Beardmore Precision; Douglas; Alexander & Co.; Sunbeam; D. R. Engineering Co.; A.J.S.; Andrew Downie, Ltd.; and Ariel. West Fife, Grantown-on-Spey, and Cumberland County were the club entries. A Scott Sociable arrived just in time to check out.

Leaving Edinburgh on a Highland trial there is always an uninteresting stretch of country to be crossed; but Stirling was soon passed, and having covered this first easy check, mostly through a driving drizzle, the sun shone out, and approaching Sheriffmuir the competitors obtained their first glimpse of autumn Highland scenery.

Not so Bad as Anticipated.

The hill was expected to claim many failures, as it was approached from a different point from that taken in the six days event. The difficulties of the climb are, however, dependent on the weather, and the surface was in excellent condition. Here it became evident that the standard of riding was exceptionally high; fast clean ascents were the common order, and Mr. Campbell McGregor (the secretary of the Edinburgh Club) began to show the first signs of anxiety! Clearly he had an unusually tough crowd to deal with, and the weeding out process was not to fulfil his expectations.

Practically all the climbs were excellent; but J. B. Porter (New Gerrard) approached the corner much too fast and fell, while an A.B.C. light car provided some sensation by charging a bank of nettles at the worst corner in order to save reversing.

Lunch was at Perth, and subsequently the heartbreaking work began. The day had turned out hot, with a following wind, so that hour after hour it seemed like travelling in a stationary atmosphere. Leaving Perth at 10.18, the route lay via Blairgowrie, the Devil's Elbow, Braemar, and Balmoral to the next observed hill, Rinloon. From Blairgowrie it was a steady climb for an hour and thirty minutes, constant gear changing, while the hot air could be felt rising in ever-increasing clouds from the engines. The scenery, of course, was grand, the birches and rowans on the mountain slopes having already acquired wonderful tints, but most of the riders were too busily employed making lightning changes and pumping oil into their engines to notice it. After seventy minutes of cruel, slogging work the Devil's Elbow, luckily unobserved, was reached. Never has there been a more remorseless test of efficiency and cooling than this part of the trial; practically all the engines were weeping and "konking." One rider had used a quart of oil in the last 30 miles, yet his engine was not smoking. Every one of the cars, official and otherwise, had steam up ere the Elbow was reached. Scarcely any of the sidecars had an ounce in hand.

Subsequently miles of all out "blinding" to make up lost time gave little chance of cooling down, and for the low powered sidecars it was neck or nothing. Few had time to spare at the Braemar check, and thereafter the trial seemed to evolve itself into one wearying struggle against time over appalling surfaces, by dizzy precipices and runs for the most part dead into the teeth of a gale.

On the Moors.

At Balmoral the Royal Standard was flying, and shortly after, in the Highlands proper, many interesting glimpses of deer stalking and grouse shooting activities were obtained. The cars attached to these were handled with much consideration for the competitors, waiting in the heather in the narrow roads till the long string had passed—possibly a case of prudence as much as anything.

On the whole, the hills claimed few failures. On Rinloon J. W. Turner (749 Bradbury sc.) was the only failure; this rider was unfortunate. Later he ran out

Scottish Two Day Trial.—

of oil, and finally he capsized his outfit, buckling wheels and forks and smashing up the sidecar body.

Cockbridge is both steep and long, but the surface was good, and it caused but two failures—T. Hussard (New Imperial) who was over-geared, and J. B. Richardson (Rover light car).

Bridge of Avon is a comparatively easy climb, straight, long, and steep, but without frills on it. Only D. Ralson (James sc.) failed to make a clean ascent, owing to a petrol union coming unsoldered. But the hills were nothing compared with the difficulties of combating the gale on the tortuous, hilly, rutty roads. For miles on end even the heavy sidecars were "all out," mostly on second gear.

After Bridge of Avon many of the riders were startled to find that they still had 16 miles to go and under 25 minutes in which to accomplish it, and the low-powered sidecars were again dead up against it. The last few miles into Grantown favoured everyone in making up time, but how some of the riders made up their lost time is still a mystery to everyone.

Tea at the salubrious Highland resort was heartily welcome, and everyone thought that the backbreaking part of the day was finished. Soon mountain roads were again the order of the day, and the contrary wind reached its utmost fury on the heights of Dava Moor and along the shores of Lochindord. Thirty miles or so of middle gear followed, with head down, blinded by storms which stung like shot. But on the last few miles into Nairn lost time was miraculously made up.

Unquestionably one feature of the trial was the high standard of riding; most of the competitors were experienced riders who knew the ways of Highland events. At Nairn everyone thought that his difficulties were over, but though the remainder of the journey into Inverness was by main road the fury of the gale and the driving storms proved as trying on this stretch as ever.

Truly may Saturday be described as one unending fight against time and wind. The low-powered passenger machines were the most severely taxed, the heavy sidecars were proportionately better off, but the solo men had it all their own way.

The results, which are subject to amendment and addition, speak well for the toughness of the competitors: Retired on Saturday—T. Hussard (New Imperial); J. W. Turner (Bradbury sc.); J. Cocker (Coventry Eagle); R. Spence (Sunbeam). Lost Marks on Time—Tom Gillies (Sunbeam); H. Hiscock (Morgan); W. S. C. Walker (Ariel sc.); A. Macgillivray (Rudge).

Bright sunshine greeted the starters on Monday, when all but one—a light car driver—commenced the homeward journey to time. Inverfarigaig corkscrew, however, caused many failures.

After passing Cockbridge. A loose and steep descent with one of the many hump-backed bridges met with on the trial.

SPORTING TRIAL IN SURREY.

Light Car Wins the Sopwith Cup. Only Four Motor Cycle Gold Medals.

MOTOR cycles and cars competed on equal terms in last Saturday's trial of the Surbiton M.C. for the Sopwith Cup; and reversing the usual order of things, the four-wheelers made the better performance.

The event, which had a total entry of 48, started at the Talbot Hotel, Ripley, and was favoured with dry if not very sunny weather. The afternoon's route was the morning section taken in a reverse direction, the whole course measuring only 100 miles.

High Button was the most severe test of the day, but only accounted for one outright failure among the motor cycle entry. That was J. A. Palmes (Scott-Squirrel), who was baulked, made two fresh attempts, and then sheared his chain sprocket and retired. The following required assistance: G. Baxter (Harley-Davidson sc.). E. A. Bridgman (Indian sc.), and J. A. Masters (Harley-Davidson sc.). E. O. Spence, on another Harley outfit, probably made the best ascent of all.

Gulley Lane is not steep, but on Saturday it was slippery and required very cautious negotiation. C. T. Ashby (N.U.T.) ran into a gulley and fell heavily, bending his handlebars. He did not retire, however.

Near the finish Shere watersplash was recrossed, and Alan Gruzelier (Zenith-Bradshaw) skidded in the water and came to a stop on the opposite bank, announcing that both brakes and one cylinder were out of action, and that he was going to retire.

A Salmson car won the Sopwith Cup, and a team of Salmsons won the team prize. The awards to the motor cyclists were as follows:—

Pole Cup (for best Motor Cycle Performance). C. E. Taylor (Vasco).

Gold Medals.

R. B. Clark (Zenith), C. E. Taylor (Vasco), W. Henry Wells (A.J.S. sc.), F. A. Longman (Ariel).

Silver Medals.

H. L. Wells (Norton), R. Staunton (Triumph), F. A. McNab (Trump-Jap), J. Holroyd (Rex Acme sc.), B. Fowke (——), R. Saltmarsh (Harley-Davidson), A. Fraser (Brough Superior), A. S. Guthrie (Diamond), F. E. Salter (Zenith), F. C. Townshend (Zenith-Bradshaw). R. Charlesworth (Zenith sc.), C. W. Johnson (Harley-Davidson), Geo. Baxter (Harley-Davidson).

RED REAR LIGHTS IN SCOTLAND.

SEVERAL Scottish riders have been fined on recent occasions for not carrying red rear lights on their motor bicycles. The exact position as regards Scotland has been rather obscure, but the matter of a red rear light is governed in England by the order issued by the Local Government Board of December 18th, 1913. As no similar order has been issued by the Secretary for Scotland, the matter is regulated by the Use and Construction Order, 1904.

It appears that the law officers for the Crown of Scotland have issued instructions to Procurator Fiscals that they are to enforce the necessity for a red light to the rear of motor cycles until such time as the High Court rules that such is not necessary. The matter was debated in a Sheriff's court recently, and the Sheriff took the view that the regulation is applicable and the motor cyclist was fined. It appears that the chances of success on an appeal are remote

A YORKSHIRE SCRAMBLE.

Grease, Boulders and Water in the Scott Trial. 58 Entries; 41 Starters; 27 Finishers.

ONCE again the Scott trial has been successfully carried through in the usual atmosphere of cheeriness and good sportsmanship. Rain somewhat marred the trial from a spectator's point of view, but it takes more than a drop of water to damp the spirit of enthusiasm which invariably surrounds this sporting event.

As far as competitors are concerned, a little water more or less makes but small difference, since the number and depth of the water-splashes are generally sufficient to ensure at least one wetting.

A Treacherous Surface.

Nevertheless, the grass and moorland tracks were undoubtedly more greasy and treacherous than usual, and this circumstance accounted for several spills.

Mostly these falls were of a minor nature, and resulted in nothing more serious than bent footrests and broken mudguards, but J. S. Duxbury—one of the Scott No. 1 team—was unfortunate enough to damage a collar-bone near Grassington, and was forced to retire, while M. G. A. Scalley (600 Humber) caught a boulder and snapped his footbrake rod, in consequence of which he slid over the side of a hill, after surmounting Park Rash, and rolled to the bottom. He was lucky enough to escape with a slightly damaged knee and bent footrests; pluckily he carried on to a finish.

The organisers managed to include three new water-splashes near Blubberhouses—all of some severity—and a nasty section of rocky hill at Hardcastle. These, however, merely acted as a set-off against the elimination of the Grimwith Reservoir section, which in previous Scott trials has been the most difficult part of the course.

As usual, there were many devices to ensure the safe passage of the splashes, some of which were effective, though a good rider with a knowledge of the course is the best safeguard of the mark sheet.

Trouble Preventatives.

Long upturned inlet and exhaust pipes were the rule, and many plugs were encased in weird and wonderful coverings. P. Pehrson appeared on an experimental chain-driven Dunelt, which performed well, though the rider lost time through a jury-rigged brake rod, which bent at awkward moments. C. S. Burney had an Ekon carburetter fitted to his B. and S. Beardmore-Precision, and spoke highly of the instrument.

As usual, the entry of 58 comprised a number of Scotts, Triumphs, and Sunbeams, and there was a sprinkling of small machines, amongst which the little 349 c.c. A.J.S. machines performed prominently. Brough, Martinsyde, and Harley-Davidson mounts represented the larger class.

Troubles began early in the day, for one of the late starters fell at Otley bridge, within a few hundred yards of the start, while within the first four miles the number of clean sheets could be counted on the fingers of one hand.

Dob Park watersplash was responsible for fearful casualties in the list of 41 starters, and the best crossings which we observed must be credited to W. Brand (550 Triumph), belt-driven, whose previous experience and good riding served him well, H. Langman (532 Scott), J. C. Thompson (678 Martinsyde), G. M. Townsend (555 P. and M.), and G. Clapham (532 Scott).

Whilst B. Crosthwaite (Edmund) and H. Smith (481 Scott Squirrel) paddled their way across this water-splash, G. M. Townsend (555 P. and M.) passes through and shoots up the hill.

Several others crossed without stopping their engines, though the wheels were checked momentarily by boulders in the bed of the stream. The many failures caused the surface of the stream to assume an iridescent and patchy appearance at frequent intervals.

Some trouble was caused by the subsequent greasy climb, and F. R. Rhodes (481 Scott Squirrel) was considerably delayed by water in the magneto.

Near Blubberhouses the new part of the course, with its three splashes followed by a fourth obstacle of a similar nature at Hey Slack, caused repetitions of the Dob Park performances to a greater or less degree, according to the rider's luck and skill.

Since circumstances prevented the inclusion of the Grimwith section, times to Burnsall were better than usual, but the Scott crack riders had picked up well, and looked like a winning team.

Over a Forgotten Track.

Immediately after lunch came one of the most trying sections of the route, the long, deserted, boulder-strewn track to the derelict lead mines at the head of Hebden Ghyll. Great boulders, remnants of rough paving, heaps of ore debris, and water-splash after water-splash were the obstacles.

No one could refrain from some foot assistance. The worst splash was followed by a stony right-angle bend, and a 1-in-3 path up a tip of mine refuse. Although barely four miles from the lunch control, H. Langman (Scott) was the third arrival at this point, despite his No. 26, and ploughed through the mud, water, and stones at speed. R. C. Morris (Scott) stopped, baulking E. Mainwaring (Scott). W. Backhouse (499 Triumph) jammed in the deep, waterlogged ruts approaching the stream. J. S. Whitby (499 Sunbeam), J. S. Duxbury (Scott), and G. M. Townsend (P. and M.) came through in close order. Duxbury was very neat, but a few miles further, on the steep descent from Yarnbury to Grassington, got into a gulley at speed, fell, and damaged his left arm. D. Bewsher (346 Francis-Barnett) made a fine attempt until his wheels jammed between two boulders.

Park Rash.

Park Rash, though in comparatively good condition, is never an easy climb, and few there were who could claim really clean ascents. Star performances were made by W. Moore (532 Scott), W. Clough (532 Scott), H. Langman (532 Scott), and F. Dean (498 Sunbeam). Good climbs were also made by G. M. Townsend (555 P. and M.), W. Brand (550 Triumph), G. Clapham (532 Scott), who, however, skidded all over the hill, W. Wells (498 Sunbeam), and D. Bewsher (346 Francis-Bennett).

R. C. Morris (532 Scott) caused a diversion by falling, his machine emitting such clouds of smoke that a few spectators thought it had caught fire.

W. Backhouse (499 Triumph) takes Jack Hill at a good speed in spite of the atrocious surface.

Just previous to the competitors' ascents C. P. Wood, who was not competing, made the hill look ridiculously easy by making a clean climb with his Scott sidecar outfit. His first attempt failed when round the corner and over the worst of the hill, but the second try was absolutely successful, and it should be added that his passenger was normally seated throughout, and his lowest wear was only 9.1 to 1.

Readers should not imagine from this that the hill is easy. Rather it should be inferred that the performance was a phenomenal one, rendered possible by fine riding and a good machine.

Crossing a River.

Driving mist and rain coming down the valleys made the conditions difficult for competitors and observers on the lonely tracks near Angram Reservoir.

Remarkably enough, nine or ten riders actually crossed the 30- or 40-feet width of the River Nidd non-stop, with the water up to the hubs. F. Dean (499 Sunbeam), M. G. A. Scalley (600 Humber), R. C. Morris (532 Scott), E. Mainwaring (532 Scott), H. Langman (532 Scott), J. M. Davies (486 Scott), W. Wells (499 Sunbeam), and F. H. Gutteridge (349 A.J.S.) made the best crossings.

On the ascent of The Scar, which followed the Nidd crossing, the length was difficult to allow observations. No hill ever included in a trial can be likened to it, and under the wet conditions it was a case of everyone floundering to the summit as best he could.

A list of the various troubles would take too long to print, so we must content ourselves by congratulating the organisers once again and by giving a list of provisional results as follows.

Of the 27 finishers the fastest times over the 83-mile course were :—

W. Moore (532 Scott), 3h. 49m.
H. Langman (532 Scott), 3h. 58m.
G. Townsend (555 P. and M.), 3h. 58m.
F. H. Gutteridge (349 A.J.S.), 4h. 5m. } tie.
G. Clapham (532 Scott), 4h. 5m. }

SPECIAL PRIZE BEST AMATEUR.
W. Moore (532 Scott).

FOLRIGG CUP—BEST PERFORMANCE OF SCOTT RIDER
G. Clapham (532 Scott).

MYERS CUP FOR TRADE TEAMS.
Scott No. 2.
J. H. Holmes (532 Scott).
R. C. Morris (532 Scott).
E. Mainwaring (532 Scott).

SCOTT TROPHY—AMATEUR TEAMS.
Sunbeam.
J. S. Whitby (499 Sunbeam).
W. Smith (499 Sunbeam).
W. Wells (499 Sunbeam).

CLUB TEAM PRIZE.
Keighley Club.
C. H. Slingsby (532 Scott).
W. Moore (532 Scott).
G. Clapham (532 Scott).

BEST PERFORMANCE BY TRADE RIDER.
Langman (532 Scott).

CONSOLATION PRIZE.
W. Smith (499 Sunbeam), who went through a wall, but made good performances on the subsequent obstacles and formed one of the winning amateur team.

NOTES.

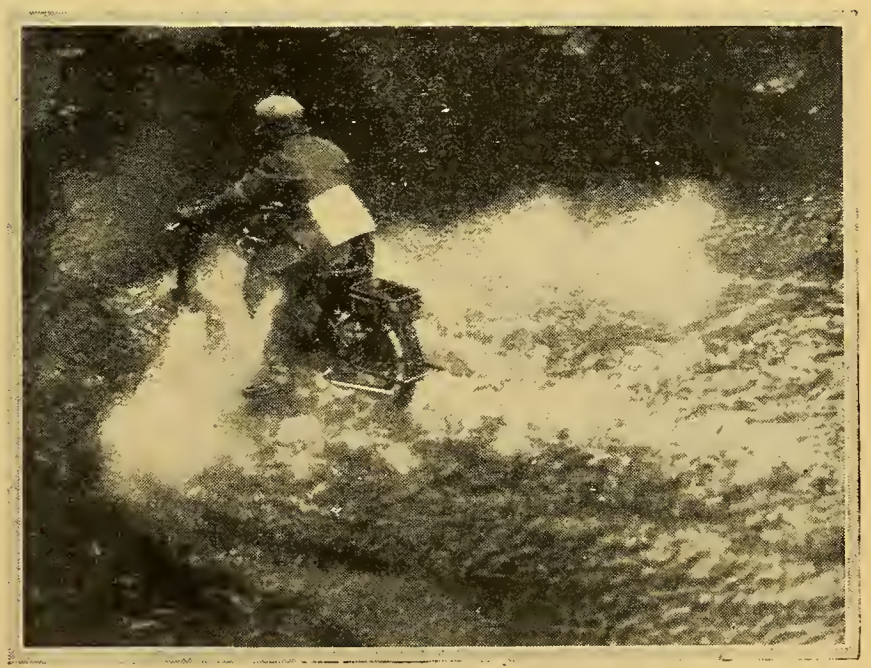
H. Langman, who was leading for some time, lost time before Park Rash with a puncture. G. Clapham went astray near Greenhow. W. Brand was delayed with a broken throttle wire; and so on.

M. J. Akam (flat twin Brough) was seen struggling round with a broken back mudguard, trailing stand, dangling footrests, and no carrier at all—yet he kept going

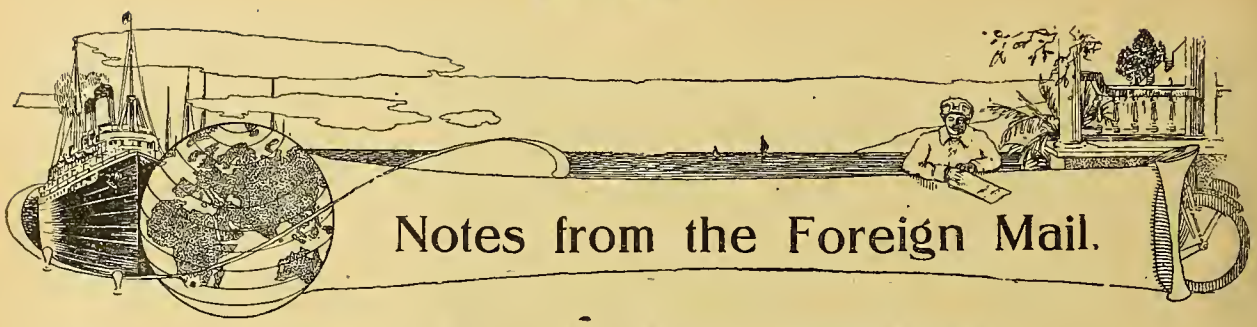
After a fall which delayed him three quarters of an hour, C. S. Burney (348 Beardmore B. and S.) restarted and completed the course about an hour behind time.

Using a 1911-12 Scott, which has done three Scott trials already, T. E. Oliver discovered a new cure for a damaged radiator. Before ascending Park Rash he purchased a strip of sticky fly-paper in Kettlewell and bound it round the leaking part; the cure was successful.

Thirty-six genuine amateurs out of an entry of fifty-eight competitors in a thorough-going rough-riding trial is a proof of the Yorkshire tykes' enthusiasm.



J. S. Whitby (499 Sunbeam) leaves a bow wave like a small torpedo boat.



Notes from the Foreign Mail.

Activity in the Antipodes. Honour to Italian Designer.

Motor Cycle Activity in the Antipodes.

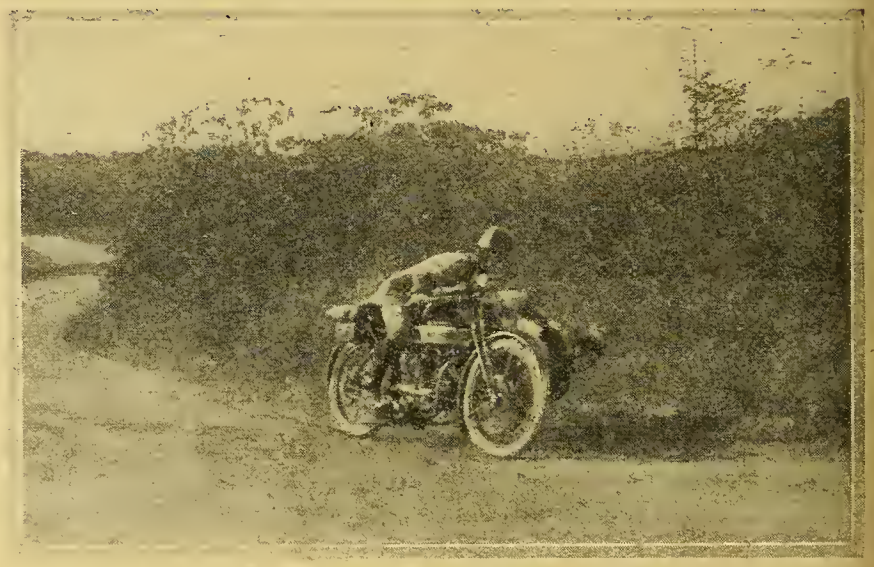
Wherever Englishmen or descendants of Englishmen are to be found there is plenty of motor cycle activity. Both in Australia and New Zealand we hear of numerous competitions and great enthusiasm. Nearly all the clubs in this part of the world are affiliated to the Auto Cycle Union of Great Britain.

New Italian Big Twin.

According to latest information the 1923 Della Ferrera will be a twin-cylinder of 1,000 c.c., with four valves of enormous size placed laterally in the heads. The gear reduction will be in a gear box forming a unit with the crank case, and the pinions will always be in mesh. Rear springing will be incorporated.

An Exciting Chase.

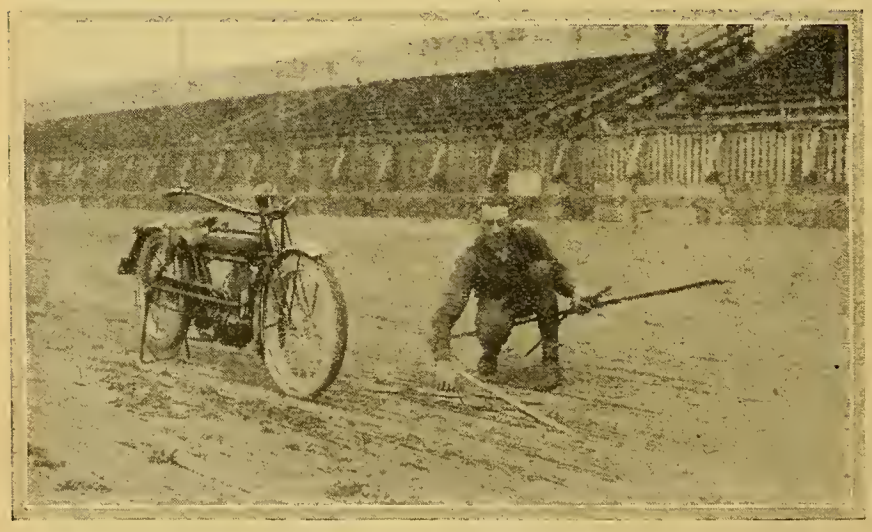
At the Borough Court, Durban, S.A., a native of Mauritius was stopped by a police constable for driving a noisy machine. He was stated to have been driving at 30 m.p.h., carrying three passengers, one astride the tank and two on the pillion. The policeman chased him and called upon him to stop, which he did, but just as the arm of the law came to take particulars he let in his clutch and escaped. The policeman apparently mounted his motor cycle and followed at about 40 m.p.h., but he had to give up the chase. The motor cyclist was eventually traced and fined £5 or 14 days on each of two counts.



"A RADIUM BLAZE." A Durban newspaper in describing a competition, held by the Natal M.C.C., said "The Douglas exposition of climbing with a passenger and sidecar was a radium blaze of efficiency." F. Zurcher won the event against bigger machines.

Next Year's Belgian Shows.

Motor cycles will be shown at the Salon de l'Automobile, which will be held in Brussels from the 13th to the 24th January, 1923. On the following month there is the Third Belgian Motor Cycle and Cycle Show, to be held at the Palais D'Egmont from February 24th to March 7th.



This is what happens when motor cycles are raced on the American board tracks built for cycle racing.

Honour to Italian Designer.

After the wonderful success of the Garelli in the French and Italian Grand Prix, H.M. the King of Italy officially and tangibly honoured the merits of Engineer Garelli by conferring on him the title of Knight of the Crown of Italy.

South African Track Wanted.

We learn from South Africa that the Rand Motor Cycling Club has been considering several schemes for the building of a first-class track for motor and motor cycle speed tests, but nothing suitable has yet been found.

Disunion in Belgium.

Unfortunately discord is again prevalent in Belgian motor cycle circles. It appears that the Motor Union of Liége has been organising trials without submitting rules to the Belgian Motor Cyclists' Federation. One of these trials was from Liége to Paris and back, and its rules should have been submitted to the French Motor Cycle Union as well. The outcome is the Liége Motor Cycle Union is no longer affiliated to the ruling body.

BIG TWIN MAKES FASTEST TIME.

East Midland Centre's Successful Event at Mansfield.

THE East Midland Centre held a very successful hill-climb at Norman's Hollow, Mansfield, on Saturday last. The hill permitted of some very fast speeds being made, especially as a flying start was allowed. The stretch chosen began with a down gradient for some 100 yards, which allowed machines to get well going before entering upon the up grade of about 1 in 13.

There had been heavy rain in the morning, but the road was perfectly dry when a start was made at 2.30. There were no less than 70 competitors. The new basis decided upon by the Auto Cycle Union for the calculation of horse-power was used, under which 100 c.c. capacity counts as one horse-power. Thus the 350 c.c. class became the class for solo machines not exceeding 3½ h.p., and the 550 c.c. class the class for solo machines not exceeding 5½ h.p. Though explained fully on the programme, this innovation caused some little confusion amongst spectators and competitors alike.

George Brough (976 Brough Superior) recorded 21s. for the half-mile, or 85.4 miles per hour, which was the fastest time of the day. Brough also made fastest sidecar time at a speed of 72.5 m.p.h. (24⅘s.), Halton, who was next best, making his best time of 25⅗s., and Dance running third at 26⅖s.

Each class was divided into three sections.

Section C was for all who had not previously been placed first, second or third at any hill-climb or speed trial this year. Section B for "non-experts" who had gained the aforementioned successes. Section A for experts under A.C.U. definition.

CLASS 1.—Sidecar machines not exceeding 550 c.c.

Section B.

1. F. Sisson (490 Norton), 27⅗s.
2. H. M. Barron (490 Norton), 30⅘s.
3. K. S. Topping (490 Norton), 32s.

Section A.

1. G. Dance (499 Sunbeam), 27⅕s.
2. G. Boston (349 A.J.S.), 30s.

CLASS 2.—For sidecar machines not exceeding 750 c.c.

Section B.

1. F. Sisson (490 Norton), 27⅕s.
2. J. G. Richards (688 Coventry-Victor), 30s.
3. H. Barron (490 Norton), 30⅕s.

Section A.

1. F. T. Hatton (733 Colmore-Douglas), 27s.
2. G. Dance (499 Sunbeam), 27⅘s.

CLASS 3.—For Sidecar Machines and 3-Wheelers of unlimited horse-power.

Section B.

1. F. Sisson (490 Norton), 28s.
2. J. Richards (688 Coventry-Victor), 30s.
3. H. M. Barron (490 Norton), 30⅕s.

Section A.

1. G. Brough (988 Brough-Superior), 24⅘s.
2. F. Hatton (733 Colmore-Douglas), 25⅗s.
3. G. Dance (499 Sunbeam), 26⅖s.

CLASS 4.—For 2-Stroke Machines not exceeding 350 c.c.

Section C.

1. S. Marshall (247 Velocette), 35⅕s.

Section B.

1. S. Baines (247 Levis), 29⅕s.
2. A. Bowerman (249 Velocette), 35⅕s.
3. E. Mundey (248 New Hudson), 41⅕s.

CLASS 5.—For Unlimited 2-Stroke Machines.

Section C.

1. W. Cudlip (482 Scott-Squirrel), 29s.
2. R. Doughty (482 Scott-Squirrel), 30⅖s.
3. W. Houghton (482 Scott-Squirrel), 32⅗s.

Section B.

1. S. Baines (247 Levis), 28⅗s.
2. F. Nash (482 Scott-Squirrel), 29⅗s.
3. C. Barnes (482 Scott-Squirrel), 31s.

CLASS 6.—Solo Machines not exceeding 300 c.c.

Section B.

1. S. Baines (247 Levis), 30s.
2. J. Heath (249 Coventry-Victor), 32⅗s.
3. A. Bowerman (249 Velocette), 34s.

Section A.

1. J. Roberts (249 New Imperial), 34s.

CLASS 7.—Solo Machines not exceeding 350 c.c.

Section C.

1. M. McEvoy (349 Douglas), 28s.
2. C. A. Belcher (349 A.J.S.), 30s.
3. C. Spearing (349 A.J.S.), 31⅖s.

Section B.

1. P. Norris (349 Sheffield-Henderson), 25⅕s.
2. F. Craner (349 Rex-Acme), 29⅗s.
3. M. Hill (349 Sheffield-Henderson), 32⅖s.

Section A.

1. G. Dance (349 Sunbeam), 24s.
2. R. Lucas (349 Sheffield-Henderson), 26⅗s.
3. J. Simpson (349 A.J.S.), 27⅕s.

CLASS 8.—Solo Machines not exceeding 550 c.c.

Section C.

1. J. Carter (490 Norton), 26⅘s.
2. P. Merriman (490 Norton), 28⅕s.
3. W. Cudlip (482 Scott-Squirrel) and H. Lavender (494 Douglas) 29s.

Section B.

1. F. Sisson (490 Norton), 23⅗s.
2. H. M. Barron (490 Norton), 24⅕s.
3. F. Stevenson (496 Brough), 25⅕s.

Section A.

1. G. Dance (499 Sunbeam) and H. Hassall (490 Norton) 22⅕s.
3. G. Boston (349 A.J.S.), 24⅕s.

CLASS 9.—Solo Machines not exceeding 750 c.c.

Section C.

1. J. Carter (490 Norton), 25⅗s.
2. P. Merriman (490 Norton), 27⅘s.
3. H. Lavender (494 Douglas) and S. Johnson (490 Norton) 29s.

Section B.

1. F. Sisson (490 Norton), 24⅖s.
2. H. M. Barron (490 Norton), 24⅗s.
3. — Colher (499 Sunbeam), 24⅘s.

Section A.

1. F. Hatton (733 Colmore-Douglas), 21⅗s.
2. G. Dance (499 Sunbeam), 22⅗s.
3. G. Boston (349 A.J.S.), 24s.

CLASS 10.—Unlimited Solo Machines.

Section C.

1. J. Carter (494 Norton), 25⅕s.
2. H. Ball (988 Brough-Superior), 25⅖s.
3. H. Lavender (494 Douglas), 29⅕s.

Section B.

1. F. Sisson (490 Norton), 24⅗s.
2. K. S. Topping (490 Norton), 24⅕s.
3. F. Stevenson (496 Brough), 25s.

Section A.

1. G. Brough (988 Brough-Superior), 21s.
2. F. T. Hatton (733 Colmore-Douglas), 22s.
3. G. Dance (499 Sunbeam), 22⅕s.

HIGH SPEEDS AT EASTBOURNE.

FASTEST time of the day at the speed trials on Eastbourne Front organised by the Eastbourne and District M.C.C., was made by Kaye Don (998 Indian), who covered the half-mile course at a speed of 87.36 m.p.h. This was the first time speed trials have been held at Eastbourne; and though the weather threatened at the start it improved later in the afternoon.

In the 350 c.c. class the amateur winner was J. B. Penn (348 Blackburne), while Bance (O.E.C. Blackburne) triumphed in the general and also in the expert classes.

In the 600 c.c. class R. O. Lowe (490 Norton) was winner among the amateurs, A. Fraser (499 Sheffield-Henderson) in the general class, and H. W. Hassall ran in the experts' category. Kaye Don's Indian and the Nortons swept the board in the unlimited classes.

The Eastbourne promenade as a race track. C. H. Chubb (349 Douglas) who gained third place in the 350 c.c. solo class for amateurs at the recent speed trials.

CLUB NEWS (continued from p. 414)

Luton and South Beds A.C.

The annual speed trials were held on the 9th inst. over the usual ½ km. course at Luton Hoo. Fastest time of the day was made by E. C. E. Baragwanath, on a 994 c.c. eight-valve Matchless, who covered the ½ kilom. in 15 seconds. Results:—

Time.

275 c.c.—A. A. Swan (249 New Imperial).

Norfolk M.C. and L.C.C.

Although no records were broken, some fast times were recorded at the club's hill-climb held at East Ringland on the 7th inst. The meeting was well organised, and a large crowd was present. Results in the motor cycle classes were as follows:—

TOURING CLASSES.

Solo (General).

250 c.c.—(1) G. H. Hanworth (247 Levis), 22⅘s.; (2) A. S. Bagshaw (247 Velocette), 28s.; (3) C. P. Reynolds (247 Sun Vitesse), 30s.
350 c.c.—(1) R. A. Bryant (349 A.J.S.), 21⅘s.; (2) H. C. Hanworth (349 Sheffield Henderson), 23⅖s.; (3) G. S. Sawyer (349 A.J.S.), 23⅘s.
500 c.c.—(1) D. R. Popplewell (499 Triumph), 18⅗s.; (2) H. C. Mack (499 Triumph), 18⅗s.; (3) P. Sherwood (499 Triumph), 19s.
Formula result for first three events combined:—(1) H. C. Mack; (2) G. Enoch; (3) R. D. Popplewell.

Solo (Experts).

250 c.c.—(1), G. H. Hanworth (247 Levis), 28⅘s.; (2) A. S. Bagshaw (247 Velocette), 29⅕s.
350 c.c.—(1) G. F. Clutton (349 A.J.S.), 20⅖s.; (2) R. A. Bryant (349 A.J.S.), 21s.; (3) H. C. Hanworth (349 Sheffield Henderson), 23⅕s.
500 c.c.—(1) T. B. Hensman (490 Norton), 18⅗s.; (2) K. S. Duncan (492 Sunbeam) and H. C. Mack (499 Triumph), 19s.; (3) B. A. Hatcher (499 Triumph) and P. Sherwood (499 Triumph), 19⅛s.
Formula result for last three events combined:—(1) T. B. Hensman; (2) H. C. Mack; (3) R. A. Bryant.

Sidecars (General).

600 c.c.—(1) H. C. Mack (499 Triumph sc.), 22⅗s.; (2) T. B. Hensman (490 Norton sc.), 23⅕s.

Sidecars (Experts).

600 c.c.—(1) R. S. Duncan (492 Sunbeam sc.), 21⅖s.; (2) S. A. Towlson (490 Norton sc.), 21⅘s.; (3) H. C. Mack (499 Triumph sc.), 22⅖s.
Awards on formula:—(1) S. A. Towlson; (2) H. C. Mack; (3) G. F. Clutton.

STRIPPED CLASSES.

Solo (General).

Unlimited.—(1) T. B. Hensman (490 Norton), 18⅛s.; (2) D. R. Popplewell (499 Triumph) and H. C. Mack (499 Triumph), 19s.; (3) J. L. Hendrie (490 Norton), 19⅘s.

Solo (General, Flying Start).

Unlimited.—(1) H. C. Mack (499 Triumph), 16⅘s.; (2) D. R. Popplewell (499 Triumph), 17s.; (3) P. Sherwood (499 Triumph) and J. L. Hendrie (490 Norton), 17⅕s.

(Solo (Experts).

Unlimited.—(1) P. Sherwood (499 Triumph), 17⅕s.; (2) R. A. Daniels (494 Douglas), 18s.; (3) E. H. Gowing (492 Sunbeam), 18⅕s.

Solo (Experts, Flying Start).

Unlimited.—(1) R. F. Feon (499 Triumph), 15⅗s.; (2) R. A. Daniels (494 Douglas) and K. S. Duncan (492 Sunbeam), 15⅘s.; (3) E. H. Gowing (492 Sunbeam), 16⅕s.

(Sidecars (General, Flying Start).

Unlimited.—(1) T. B. Hensman (490 Norton sc.), 20s.; (2) H. C. Mack (499 Triumph sc.), 20⅗s.

Sidecars (Expert, Flying Start).

(1) K. S. Duncan (492 Sunbeam sc.), 18⅘s.; (2) T. B. Hensman (490 Norton sc.), 19⅖s.; (3) H. C. Mack (499 Triumph sc.), 19⅘s.

Motor Cycling Club.

Members are reminded that entries for the one-day sporting trial must reach the trials secretary, Mr. F. T. Bidlake, 84, North End Rd., Golder's Green, London, N.W.11, by the morning of Saturday, September 23rd, at the very latest. The trial is a sporting non-stop event of a simple character, starting from Caterham at about 10 o'clock in the morning, lunch is served at the same place, and the first man finishes before 5 p.m.

West Kent M.C.C., Rochester M.C.C., &c.

Twenty-three competitors, representing six clubs, started in the combined Kent Clubs' half-day trial on the 10th inst. A railway bank having a gradient of 1 in 3 was included in the course. The following clubs and competitors were successful.

West Kent M.C.C.

— Jessop (346 Francis-Barnett).
W. Smith (600 Humber).
J. Fitzgerald (490 Norton).
H. Carter (678 Martinsyde sc.).

Rochester M.C.C.

— Potts (998 Harley-Davidson sc.).
— Chalklin (976 Matchless sc.).

Glasgow M.C.C.

Official results of the 100 miles non-stop reliability trial held on the 9th inst. are as follows:—

Gold Medals.

J. A. Struther (494 Douglas), A. J. Dickie (F.N.), H. E. Horwood (498 Ariel), J. W. Dickie (F.N.), E. A. Small (492 Sunbeam), R. N. Lochhead (498 Ariel), I. H. McGrouther (N.U.T.), R. D. Robertson (976 Matchless sc.), H. Goodwin (492 Sunbeam), I. A. J. Cheyne (779 A.J.S. sc.), A. D. Hadden (Reading Standard sc.), R. Watson, Jr. (738 Martinsyde sc.).

Special Novice Prize.

I. A. J. Cheyne (779 A.J.S. sc.).

Harrogate and District M.C.C.

Results of the Yorkshire Centre team trials are now to hand, and are as follows:

WINNING TEAM (Haggas Shield and Gold Medals).

ILKLEY M.C. AND L.C.C.—
W. Moore (532 Scott), lost no marks.
J. S. Duxbury (532 Scott), lost 10 marks (on time and failed Kilburn).
W. H. Clough (532 Scott sc.), lost no marks.

SECOND TEAM.

BRADFORD M.C. AND L.C.C. (No. 1 TEAM)—
W. R. Haggas (499 Triumph), lost no marks.
H. S. Moorhouse (499 Triumph), lost 10 marks (failed non-stop).
G. M. Townsend (555 P. and M. sc.), lost 3 marks (on time).

THIRD TEAM.

HARROGATE AND DISTRICT M.C.C. (No. 1 TEAM)—
D. Moore (499 Sunbeam), lost 5 marks (on time).
A. Hill (348 New Imperial), lost 20 marks (failed two non-stop sections).
C. W. Hill (532 Scott sc.), lost 5 marks (failed Boltby).

Ulster M.C.C.

Held under ideal conditions at Magilligan Strond on the 9th inst., the autumn speed trials passed off very successfully. Event 5, a 100-mile contest for the Championship of Ulster, was won by H. Langman, on a Scott-Squirrel. Results:—

Event 1.—Open Five Miles Scratch Race (350 c.c.).

1. H. Chambers (349 A.J.S.).
2. W. C. Hunter (348 Hunter).
3. O. Wade (349 o.h.v. A.J.S.).

Event 2.—Open Five Miles Scratch Race (Unlimited).

1. G. W. Walker (499 Norton).
2. J. F. Dinsmore (976 Zenith).
3. H. Langman (481 Scott).

Event 3.—Open Ten Miles Handicap Race (350 c.c.).

1. H. Chambers (349 A.J.S.), scratch.
2. O. Wade (349 A.J.S.), handicap 30s.
3. W. C. Hunter (348 Hunter), handicap 1m.

Event 4.—Open Ten Miles Handicap (Unlimited).

1. J. F. Dinsmore (976 Zenith), scratch.
2. T. Mallon (492 Sunbeam), handicap 30s.
3. H. Langman (481 Scott), scratch.

Events 5 and 6.—100 Miles Championship of Ulster for 600 c.c. Machines and Open 100 Miles Handicap Race for Machines of Unlimited Capacity:—

1. H. Langman (481 Scott), scratch.
2. R. H. Fitchie (998 Harley-Davidson), riding in handicap only, scratch.
3. N. P. Metcalfe (976 Brough-Superior), riding in handicap only, scratch.

Woolwich, Plumstead and District M.C.

The closing run for the present season will take place on October 1st, starting from Knockholt at 2 p.m., and finishing at the Bull Hotel, Wrotham, where tea will be provided.

Coventry and Warwickshire M.C.

The Redesdale Arms, Moreton-in-Marsh, will be the rendezvous of members invited to the annual tea by the president, Colonel J. A. Cole, O.B.E., on Saturday next. The surroundings and arrangements are ideal, and a most satisfactory gathering is looked forward to.

Matlock and West Derbyshire M. and M.C.C.

Several well-known Derbyshire hills were included in the club's half-day trial, held on the 10th inst. Fine weather did much to make the event a success. The possible number of marks was 210, and first place and a gold medal was taken by C. Spence (398 A.B.C.) with the loss of only one mark. Silver medal: F. Toplis (499 Wilkin), 206 marks. Bronze medals: F. Daniels (499 Rover), 200 marks; G. Davis (555 P. and M.), 197 marks; J. R. Greatorex (779 A.J.S. sc.), 191 marks.

Essex M.C.

Results of the London-Bala-Dunstable 24 hours trial held on the 8th and 9th inst., and referred to last week, are now to hand, and are as follows:—

Cups: E. A. Marks (349 A.J.S.), H. E. K. Sawtell (1,098 Morgan).

Gold Medal: H. W. Glendinning (976 Zenith sc.).

Silver Medals:—W. H. Norris (698 Raleigh), P. D. Walker (1,078 G.N.), S. W. Dame (1,098 Morgan).

Bronze Medal:—W. P. Browning (779 A.J.S. sc.).

Bristol M.C. and L.C.C.

Eighteen out of twenty-five starters completed the stiff 396 miles' course of the annual twenty-four hours trial held on the 8th and 9th inst. Several competitors lost their way, while one rider crashed through his lamp bracket breaking and plunging him into darkness. Medals were won by the following:—

Gold: K. J. Woods (499 Wilkin sc.), W. Le Brun (499 Rudge sc.), F. G. Mann (989 Harley-Davidson sc.), H. Jacobs (976 Zenith sc.), C. G. Scampton (499 Dunelt sc.), R. Gillard (499 Sunbeam sc.), E. Jellyman (998 Indian sc.), E. G. Ferg (1,078 G.N.), C. W. Ranking (1,078 G.N.), P. Bonnet (1,078 G.N.), F. Wiltshire (499 Rudge sc.).

Silver: A. Dowling (770 B.S.A. sc.).

Bronze: N. Moores (349 Verus).

St. Albans and District M.C.C.

Speed trials were held at Bedwell Park, Hatfield, over a half-mile course. Fastest time of the day was made by J. Hill (494 Douglas). Results:

275 c.c.:
A. A. Swan (249 New Imperial), 29⅖s.

350 c.c.:
T. C. Battersby (349 A.J.S.), 27⅗s.

500 c.c.:
(1) J. Hill (494 Douglas), 24s.
(2) A. C. Gurling (494 Douglas), 25s.
(3) C. Dunham (490 Norton), 25⅗s.

750 c.c.:
(1) A. C. Gurling (494 Douglas), 23⅘s.
(2) C. Dunham (490 Norton), 24s.

1,000 c.c.:
(1) J. Hill (494 Douglas), 22⅘s.
(2) C. Dunham (490 Norton), 23⅖s.

Cups will be presented at the club's social on the 30th inst. on the occasion of the visit of the N.L.C. and Beds. A.C. to St. Albans.

Ashford M.C. and L.C.C.

A successful hill-climb was held at Kingswood, Boughton Aluph, on the 3rd inst. Fastest time of the day was made by F. E. Newman (492 Sunbeam). The following results were recorded:—

GENERAL.

250 c.c.: R. Hamilton (249 Velocette).
350 c.c.: R. Hamilton (249 Velocette).
600 c.c. (single): E. Newman (492 Sunbeam) and B. Doughty (550 Triumph).
1,000 c.c.: F. E. Newman (492 Sunbeam).
600 c.c. Sidecars: G. Maund (398 A.B.C. sc.).
1,000 c.c. Sidecars: G. Maund (398 A.B.C. sc.).

EXPERTS BARRED.

250 c.c.: J. Guy (247 Levis).
350 c.c.: S. Whitehead (349 A.J.S.).
600 c.c. (single): G. Oakley (499 Rudge-Multi).
600 c.c. (twin): W. E. Clarke (498 Zenith-Bradshaw).
1,000 c.c.: W. E. Clarke (498 Zenith-Bradshaw).
600 c.c. Sidecars: G. Clements (499 Sunbeam).
1,000 c.c. Sidecars: C. H. Ledger (976 Monarch).

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

HIGH CONSUMPTION.

(1) Can I improve on 45 m.p.g. with a 350 c.c. two-stroke sidecar; weight of passenger and driver 18 stone together? (2) With a 30 jet in the B. and B. carburetter the engine takes full air at once, but four strokes on attempting slow speed whether air is decreased or not. With a 26 jet it refused air altogether. (3) It is possible that after reassembling the machine is not correctly timed.—G.N.P.

(1) 45 m.p.g. is certainly rather low, but the majority of small two-stroke engines, especially when used with sidecar, have rather high petrol consumptions. (2) Why not try a jet between 26 and 30, say, No. 28, or fit a variable jet adaptor so that you can vary the opening according to conditions. (3) Time the ignition so that the spark occurs on top dead centre with the magneto control almost fully retarded.

PERMANENT LATE FIRING.

What is the cause for the present high consumption of petrol of my Villiers engined fixed gear machine? The most I am getting is 45 m.p.g. The engine was decarbonised six months ago, and afterwards I fitted a smaller jet (size 23) and reduced the petrol level, corrected lubrication to 30 drops per minute, and retarded the ignition as much as possible; I also paid strict attenton to any belt slip, but without avail. I may say that the machine runs well either on hills or level, and attains a high speed on half-throttle and full air, therefore I am at a loss.—C.B.

The petrol consumption of your machine is very poor and you should get at least 80 m.p.g. From your description everything appears to be in order, except the ignition. You say that you have retarded the ignition as much as possible, but this is quite wrong. The ignition should be advanced as far as possible to give good petrol consumption, and you cannot expect satisfactory results if you are running the engine with the spark timing permanently retarded. Set the ignition so that the contact breaker points are just open with the magneto control fully retarded when the piston is on top dead centre of the stroke. This timing, with all other adjustments in good order, should give you the best results.

Important Dates.

Sat., Sept. 30th. — M.C.C. Sporting Trial.

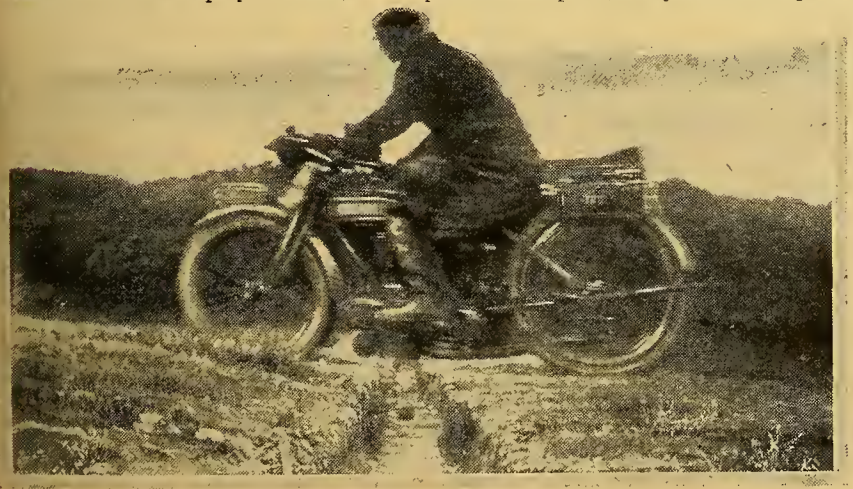
Wed., Oct. 4th, to Sun., Oct. 15.— Paris Salon.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th— Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd— Olympia Motor Cycle Show.

Thurs., Jan 13th to Mon., Jan 24th (1923) —The Belgian Salon.



Wheels, tyres, and frame receive a thorough testing when a machine has to cross gulleys such as this one, which was but a minor obstacle in a recent trial in the North.

RAISING THE GEAR RATIO.

On my Allon two-stroke it appears to me that the gears are much too low. Is it not possible to have a larger sprocket wheel on the flywheel and thus raise the ratios? There are 20 teeth on the flywheel sprocket, and 40 on the gear wheel sprocket, which gives me a ratio of 6 to 1. What number of teeth would I require to make it 4½ to 1? Do you think 4½ to 1 all right? If not, what would you advise?—W.P.W.

We do not recommend you to fit a gear as high as 4½ to 1; 5 to 1 would probably give better results. You do not state the diameter of the pulley and belt rim of your machine, but if your figure of 6 to 1 as the gear ratio is correct, with the present sprocket you will need a 24t. engine sprocket to give a 5 to 1 ratio.

RAISING COMPRESSION.

As I intend raising the compression of my engine for speed by having one-tenth of an inch taken off the flanges at the base of cylinders (bore and stroke 64 × 77), will you say if this can be done with safety, as the flange will then be reduced to about one-quarter of an inch in thickness? Personally I fail to see why they should not be strong enough, as the cylinder head and walls do not appear to be more than half this thickness. There appears to be no doubt as to the advantage of increasing the compression ratio, as with a thick layer of carbon deposit on cylinder head and piston the engine appeared to run better, particularly at speed, and it kept remarkably cool compared with the cylinder and piston being clean.—W.T.

It is not likely that the proposed reduction of the cylinder flanges will weaken them to any dangerous extent, but it would be better, if at all possible, to face down the crank case instead, or may be to take an equal amount from crank case and flange.

KNOCKING.

Knocking is generally attributed to loose big or little end bearings and to piston slap. Considering the former, theoretically it appears to be impossible, for it is easily seen that during the firing stroke at which knocking generally occurs the top of the gudgeon pin is in contact with the top of the bush throughout the compression and firing strokes, hence these two surfaces can never have the chance of impact even supposing the existence of slight play. An explanation can be put up as follows: at the top of the compression stroke the explosion, although started, has not had time to take effect on the piston, and the piston owing to its inertia "oversboots" the little end and hence begins its power stroke by being dragged down the firing stroke, and thus when the effect of the explosion is felt the piston is suddenly accelerated and strikes the little end (equally applicable to the big end). This, however, could be remedied by advancing the ignition, thus preventing the piston from overshooting, but actual practice says "No, retard ignition." Will you explain this?—C.C.I.

It is not correct to imagine that the top of the gudgeon pin is in contact with the top of the connecting rod bush throughout the whole of the compression stroke; the connecting rod slows down very appreciably as the piston nears the upward limit of its travel, but at the same time the inertia of the piston is so great that it is carried upwards to the limit of play allowed by the gudgeon pin bush. It is quite likely that even with the earliest possible ignition the contact between the top of the gudgeon pin and the top of the connecting rod small end bush has been severed. Another point to bear in mind is that at all times the pin and bush are separated by a film of oil unless the engine is overloaded or pre-igniting. In the latter case the pressure on the bearings rises so high as to break down the oil film and cause knocking, hence the practice of retarding the ignition when the engine labours.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"F.H.M." (Langley).—Ner-a-car for country hack work.

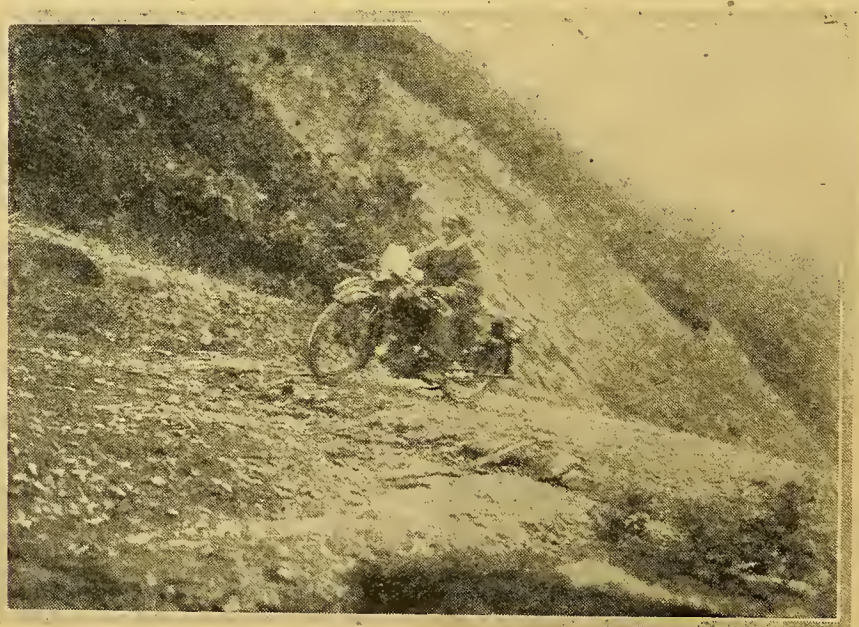
"J.F.G." (Durham).—499 c.c. Rudge-Multi with light sidecar: petrol consumption, speed, hill climbing, and whether tendency to belt-slip.

"W.E.L." (New Brighton).—398 c.c. A.B.C.: tuning for speed.

READER'S REPLY.

NEEDS OPEN EXHAUST.

Referring to "D.S.'s" query in the issue of the 7th, I have exactly the same trouble with my two-stroke (269 c.c. 1922 Chater-Lea). If I put my silencer and exhaust pipe on I lose 50 per cent. of the power. On removing them the engine runs beautifully. I also can observe a distinct pressure in the air intake of carburetter (B. and B.), which gets more pronounced on accelerating. I am certain that silencer, exhaust pipe, and ports are quite clean, and all other things, including timing, etc., are O.K. I have been in the trade ten years, but must confess that for the present I am completely baffled.—H. HALL.



Any sporting trial held in Yorkshire can safely be relied on to contain sections as bad as anything in the Colonies. This wild looking track, known as Turkey Nabs, near Ingleby Greenough, was included in the recent A.C.U. Yorkshire Centre team trial. W. Marriott (348 Coventry Eagle) making the ascent.

SPARKLETS

Found on the Road.

By Mr. F. Wilcocks, Junr., 428, Caledonian Road, Holloway, London, N.7—licence-holder from an Ivy machine.

"60 m.p.h. for 24 Hours."

A Binks carburetter was used by O'Donovan, Horsman, and Judd, the Norton riders, on their recent successful double-twelve record attempt described fully in last week's issue of *The Motor Cycle*.

Change of Ownership.

Riders of Reading-Standard motor cycles will be interested to know that the firm of Frederick and Co., of 89, Great Portland Street, London, W.1, has taken over the motor cycle business of Coppen-Allen and Co., purchasing the latter concern's complete stock of Reading-Standard machines, Plus-One and M.P. sidecars, and also the complete stock of W. E. Line. Reading-Standard spares will be available from the new address.

Successes in Northern Club Events.

In the Newcastle and District M.C. reliability trial on September 3rd, to Hawick and back, a good performance was made by J. E. Reed on a Wolf-Blackburne, who won outright the Triumph Cup for the best performance on a single cylinder machine. A further success by the same make of machine is that of R. Murphie, of Manchester, who, in the Prestwich and District M.C. trial, won the premier award, a silver cup.

A Kick-starter Invention.

One of the greatest elements in the simplification of the modern gear box is the growing practice of mounting the kick-starter on the lay-shaft and using the two low-gear wheels in place of the hitherto popular quadrant and pinion. The makers of the Jardine gear box own a master-patent on this feature, and we believe we are correct in saying that all gear boxes embodying such an arrangement do so under a licence from J. Jardine, Ltd.

An Old-time Motor Cyclist.

Prior to the war the name of S. W. Carty was often in our pages, for he took an active part in motor cycle politics, and for years acted as honorary secretary for the local motor cycle clubs in Newcastle-on-Tyne and Liverpool. In 1914 he was given a commission in the R.A.S.C., and in 1918 he was in Bagdad, eventually ranking as Lieutenant-Colonel. He was mentioned many times in despatches and was awarded the M.C. and O.B.E. Mr. Carty, who is an engineer by profession, being an M.I.A.E. and an A.M.I.E.E., has now gone to Ireland and has taken up the post of sole representative of the McKenzie motor cycle in the Irish Free State at 15-16, Crown Alley, Dublin.

The Kick Starter is

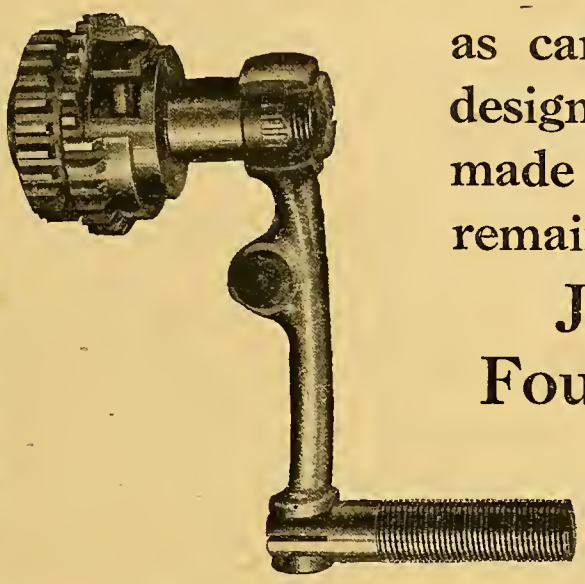
No extra gear wheels or sectors are needed. (This feature is a master patent, others are making it under a license from us.)

No cotter pin is used for fixing the crank.

There is no buffer spring to break or rattle.

A scientifically designed rubber buffer is used that does not chip in use.

The pedal pin folds up out of the way whilst riding.



as carefully designed and made as the remainder of the

Jardine Four Speed Gear Box.

2 Gallons of Petrol—300 Miles

Leonard J. King, Esq., 3, *Linscott Road, Clapton, N.*

"I should like to bring before your notice the wonderful performance of my Connaught. My machine has not been kept in cotton wool—in fact it usually travels two up. I set out on Saturday morning for Diss (Norfolk). Fifty miles out of the hundred I did in pouring rain without the slightest difficulty. After a few days I pushed out again and rode through Thetford, King's Lynn, Sleaford to Newark. After a night's rest I rode straight through Doncaster, Leeds and Darlington to Newcastle.

During the whole of the fortnight I didn't use a spanner or pump on the machine, and made no adjustments whatever.

The petrol consumption was negligible, as I only used two gallons from Newcastle to my home—nearly 300 miles!"

Read the letter at the side which we have just received.

This is one of many similar eulogising the famous

CONNAUGHT
Two Stroke.

It again confirms our claim that the Connaught is the most fool-proof, trouble-free machine on the market, and will stand up to the most severe gruelling.

From what other machine can you get such service for the money.

The ***V*-shaped SANDUM Windscreen**

ITS scientific design, its common-sense 'V' shape, are not the only features that distinguish the Sandum Windscreen above all others. It excels, too, in its most attractive appearance, adding the happiest finishing touch to any outfit. It is unapproachable also in the range and simplicity of its adjustments, in its fine workmanship and material. Yet it is sold at a price that makes it the best value of any accessory on the market.

Write for full details of both models.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

3/15.—ZE1 Bosch pattern, new, singles only, exceptional value; please state rotation; approval against cash.—Langford's, 37, Cricklewood Broadway, London, N.W.2. [1351

20% POWER INCREASE! This is what the new pattern cylinder gives a 2¾ h.p. Douglas. It has streamlined ports, and large radiating fins. My price per pair is only £5. Fit them to any old model Douglas and you'll really be surprised.

ADDITIONAL POWER may be obtained by fitting Special Lightweight Radiated Pistons, fitted with patented twin rings. They are simply wonderful, and every mail brings testimonials from all classes of satisfied riders. Price 29/- per pair, complete with gudgeon, twin rings and copper caps.

PATENTED TWIN RINGS. The only really gas-tight and frictionless ring. Thousands have already been sold and not a single complaint. For 2¾ h.p. Douglas 1/6 each; 4 h.p. Douglas, Sunbeam, Humber, and Rover 77m/m bore, 1/8 each. B.S.A., Triumph (pre 1919), Rudge (pre 1921), Singer, New Hudson 3½ h.p., Precision 3½ h.p., L.M.C., 4 h.p., 85m/m, 1/9 each. Other makes quoted for on application.

WHY SUFFER BROKEN VALVES? My valves are guaranteed 12 months not to break, scale, or burn, and never really need grinding in. They cost more but the best is the cheapest in the long run. 4 h.p. Douglas 10/-. 2¾ h.p. Douglas 9/-, complete with special spring, collar and cotter. Other makes, Triumph, Rudge, A.B.C., etc., price 10/- per valve.

A HANDY LUGGAGE CARRIER. For 4 h.p. Douglas Sidecars. Folds up neatly and is the same shape as the back of the sidecar when not in use. Light, strong, durable and fitted in 10 minutes. Price 30/- complete.

AIR COOLED VALVE CAPS. My latest are covered by patents. They never blow out nor seize in the threads. Absolutely gas-tight. Prevent knocking and keep the engine cool. Try them on your 2¾ h.p. or 4 h.p. Douglas, and if you are not absolutely satisfied have your money back. Price 4/- each.

ZOOM! ZOOM!! The popular Exhaust System. Beautifully made, finished in burnished nickel or copper. A pleasant Zooming note without back pressure. Adds pounds to the appearance of any Douglas. Price 30/- in copper finish, 33/6 nickel.

WHY SPOIL A GOOD TUBE by chafing in carrying. A tube carrier that preserves and protects your spare tube and lasts for ever. Price 10/6

THIS BEAUTIFULLY-SHAPED PAN SADDLE with adjustable springs gives you a low natural riding position and does not foul the sidecar stay. My price 25/-. Usual price 35/-.

WRITE ME about anything you want; tell me your troubles and I will help you. I was 10 years with Douglas Motors, and know all about all their models. I am the only agent who sells the 55 m.p.h. 2¾ h.p. **DOUGLAS.** Cash or Terms. Any spare part by return of post.

THOMSON-BENNETT, large type single or twin, enclosed, waterproof, variable, suit Harley, Indian, etc; £3/10.

C.A.V. singles and twins, enclosed, waterproof, variable, suit Triumph, Douglas, and all Lightweights; 55/-.

E.I.C. enclosed, waterproof, variable, suitable for Triumph, B.S.A., or any Lightweight; £3.

BOSCH, type Z.A.2, enclosed, waterproof, variable, latest pattern; ideal for Douglas, 2¾h.p. and 4h.p.; £4.

BOSCH D.A.L. twins, enclosed, waterproof, any degree, suitable for Indian, Harley, etc.; £4/10.

FELLOWS new magnetos always in stock, any degree for any engine; also a large selection of second-hand magnetos, all makes.

GUARANTEE.—Every magneto, no matter what the price or make, is guaranteed by us. Not merely that same is in good order at time of sale, but a plainly written statement that we guarantee each machine against all defects for a period of 12 months. This, we maintain, justifies us in charging a few shillings more than certain of our competitors.

RELIANCE cordially invite customers to their works to see any of the above on test. Magneto list, giving full particulars, sent upon application. It will pay you to deal with a firm of repute.—Reliance Magneto Repairing Co. (1914), 283, St. John St. London E.C.1 Tel.: Clerkenwell 4290 T.A.: Remageo. Smith, London. [9816

IGNITION, LIGHTING, ETC.

MAGDYNAMO Engineering Co., Ltd., for magnetos, spares, and repairs.

MOTOR Cyclists fit reliable high quality magnetos now and avoid certain failure of inferior magnetos.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied; will certainly recommend these magnetos."

INDIAN Machine Owners.—Your high-class machine deserves a high-class magneto. We want 1,000 Dixie 42 magnetos; send your magneto and £4 now, and we will immediately despatch you a Bosch D.A.L.

WHY is it that the leading Motor Cyclists—the men who know—are almost all sending to us for their Magnetos?

THERE must be a reason; there is; it is because the Magnetos of quality and guaranteed service, supplied by Magdynamo, beat all other Magnetos.

MAGDYNAMO will take your old Magneto in part payment.

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you want a reliable magneto with 12 months' guaranteed service that will give you starting without worry, a smoother running, and more powerful engine and better results from your Douglas? Then send for a latest enclosed waterproof type Bosch XA2 magneto now, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P. and M.'s, with 12 months' guaranteed service, price £3/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparking plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if urgent, and return it with a written 12 months' guarantee. While your magneto is being repaired we can lend you another free of charge. We could not make these offers if we were not certain of the quality of our work.

YOUR old magneto will be equivalent to new at a low cost. Send us your defective magneto now.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.

Yours faithfully,
JOHN O. GAFFIFTS.

122, Shortlands Road,
Sittingbourne, Kent.
August 17, 1922.

Mr. Brodrick,
The South-Western Appliance Co.
Dear Sir,
The St. Helier Building arrived on Saturday, two days before promise of delivery, and we are more than satisfied with it.
We erected it on Wednesday and it went together like clockwork. I am very pleased we left the order with you, as all who have seen it think the value is remarkable and admire the artistic appearance. Trusting and believing it will get you further orders from this district.

Yours faithfully,
THOS R. KENNETT.

DUNLOP Round Top, ¾ 1/10, ⅞ 2/2, 1in. 2/8, 1⅛ 3/2 per foot. John Bull, ¾ 1/11, ⅞ 2/3, 1in. 2/8, 1⅛ 3/2 per foot. Buffalo hide and chrome, ⅞ 1/9, 1in. 2/-, 1⅛ 2/3 per foot.—Bastones, 228, Pentonville Rd., King's Cross, London, N.I. [3611

CARBIDE.

CARBIDE, highest grade only, 18/6 cwt., immediate delivery.—Kemp's Garage, Importers, Louth. [2668

CARBIDE, finest quality, 19/6 cwt., F.O.R., nearest depot; coated, 24/-, ex Bristol only, C.W.O.—Hodge and Co., Warwick Rd., Bristol. [3152

CARBIDE, highest grade only, no seconds, all meshes; 19/- cwt. drum; ex 22 depots; immediate delivery.—Elloc Cycle Works, Gedney Drove End, Wisbech. [2851

CARBIDE, finest quality, giving 100 per cent. pure gas yield, all sizes; cwt. 21/6, ½-cwt. 12/6, 28 lb. 7/6, drums free. (Depots in all parts.)—Young, Importers, Misterton, Somerset. [1316

CARBIDE.—Immediate delivery of all sizes in 1lb., 2 lb., 4 lb., and 7 lb. lever lid tins, also 1 or 2 cwt. drums, labelled or plain, quality guaranteed. The cheapest firm in the trade.—The Premier Lamp and Engineering Co., Ltd., Armley, Leeds. [5088

CARBIDE, finest quality obtainable; 20/- per cwt., drums free, cash with order, free on rail, Aberdeen, Bristol, Belfast, Cardiff, Dublin, Edinburgh, Glasgow, Gloucester, Grimsby, Hull, Leeds, London, Lowestoft, Liverpool, Lincoln, Manchester, Newcastle, Preston, Port Talbot, Runcorn, Sharpness, Swansea, Yarmouth.—International Products, 77, Victoria St., Bristol. [3271

PATENT AGENTS.

J. E. S. LOOKWOOD, 3, New St., Birmingham. 'Phone: 5816 C. Patents guide free. [8403

PATENTS Advice, handbook free.—King, Registered Patent Agent, 146a, Queen Victoria St., E.C. 35 years' references. [0129

W. BRYSON, B.Sc., Assoc.M.Inst.C.E., Chartered Patent Agent, 29, Southampton Buildings, London, W.C.2. 'Phone: Holborn 672. [7917

H. N. and W. S. SKERRETT (H. N. Skerrett, Fellow of the Chartered Institute of Patent Agents, A.I.Mech.E., A.I.A.E., Associate I.E.E., etc.; W. S. Skerrett, A.I.E.E., Registered Patent Agent).—Patents, designs, and trade marks.—24, Temple Row, Birmingham. Tel.: Central 1038. T.A.: Skerrett, Birmingham. [1534

CLUB ANNOUNCEMENTS.

Space can always be obtained under this heading for announcements required by Clubs. Rate 3d. per word, minimum 3/-.

INSURANCE.

£3 Covers All Risks for 2¾h.p., others at competitive rates.—Ernest Bass, 40, Chancery Lane, W.C.2. 'Phone: Holborn 328. [0005

ECONOMY with Security.—Comprehensive policies from £3/10; Morgans, £6; sound companies.—A. R. Broadhurst, Buchanan Bldgs., 24, Holborn, E.C.I. [2778

"THE Motor Cycle" Insurance Policy is the policy authorised by "The Motor Cycle," and covers motor cycles or cycles and sidecars used for private purposes. Complete comprehensive cover. Maximum benefits, minimum rates. Full particulars and prospectuses on application.—The Autocar Fire and Accident Insurance Co., Ltd., 77, Cheapside, London, E.C.2. [0007

TUITION.

7/-.—Private Driving Lesson (car); late instructor R.A.S.C., W.R.E.N.'s, Women's Legion.—Vernon Nash, 16a, Allsop Place, Baker St. Station. 2969 Langham. [3152

SITUATIONS VACANT.

LOCAL Representative wanted, with or without experience.—Tynesider Pillion Seat Works, Union St., North Shields. [0907

SITUATIONS WANTED.

YOUNG man (23) seeks situation, motor mechanic, chauffeur, electrician's mate, keen, go abroad.—Box 3739, c/o *The Motor Cycle*. [2602

YOUNG Motor Engineer, age 22, prem. apprenticeship, thorough knowledge motor cycles, all makes, repairs, etc., good knowledge machine drawing, sales, etc., good appearance, not afraid of work, desires position, progressive post, where above would be appreciated.—Box 3684, c/o *The Motor Cycle*. [2495

FINANCIAL.—PARTNERSHIPS.

GENTLEMAN making periodic visit to Belgium will demonstrate or undertake commissions for manufacturers of motor cycles and accessories.—Box 3770, c/o *The Motor Cycle*. [2725

BUSINESSES AND PROPERTY FOR SALE, TO BE LET, OR WANTED.

MOTOR Cycle and Light Car Business, main road, S.W. district (London), extensive plant, big turnover, assured income, genuine; about £500, including plant, stock at valuation optional.—Box 3790, c/o *The Motor Cycle*. [3507

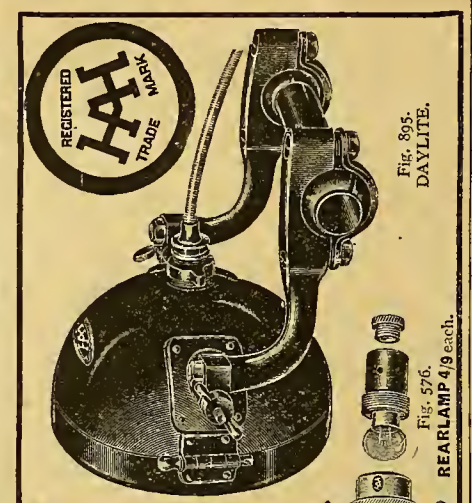

Fig. 895. DAYLITE.

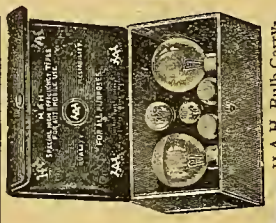
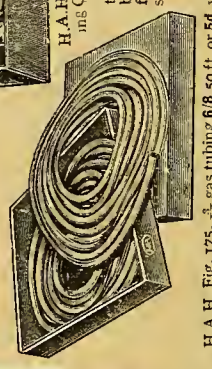
Fig. 576. REARLAMP 4/9 each.

H.A.H. Bulb Carrying Cases 6/- ea. All types of bulbs from stock.



A. H. HUNT LTD. Manufacturers of MOTOR ACCESSORIES. H.A.H. WORKS, TUNSTALL RD., CROYDON, SURREY.

Complete Card of Switches, 13/-



H.A.H. Fig. 175. ⅜ gas tubing 6/8 50 ft. or 5d. yd.

CLUTCH TAPE 1/- in tins. 6d. 7¼d.

H.A.H. MOTOR CYCLE HEADLAMP.

Fig. 895. Code word "DAYLITE," as illustrated. Nickel 60/- each, Black 65/- each. Complete set with above 123/6 each.

STOLEN.

£15 REWARD.—Stolen, about 9 p.m. 7th inst., from Hampstead Heath, Triumph (1920) Motor Cycle and Sidecar, latter painted red, index No. M.C. 3129, engine No. 563, frame No. 64,464,914. The above reward will be paid by Messrs. John W. Bell & Co., assessors, 17, Queen Victoria St., E.C.4, to the first person giving information to them as will lead to the arrest and conviction of the thief or thieves and recovery of the above intact. [2781

GENERAL TRADE.

FOR frame and spring fork lugs try Autocap, Ltd., Belvedere. List stamp. [2803

AUCTION Sales.—Palmer's Garage, Tooting, the oldest solely motor auction rooms in London. Terms, 7½%, not chargeable if machine unsold. Motor cycles and cars bought and sold for cash. Nearest goods station, Falcon Lane, L. & N.W.R.; Wimbledon, L. & S.W.R. and G.W.R.—Sole address: Palmer's Garage, Tooting, London. [2732

WANTED.

N.S.U. Gear for Rover, and 2¾h.p. J.A.P. engine.—Particulars Harford, Wye, Kent. [3153

WANTED, Clyno sidecar for 6 h.p. 1918 machine.—Box 3737, c/o *The Motor Cycle*. [2800

WANTED, front forks for 2¼h.p. Precision Junior.—Simpson, Birmingham Rd., Bromsgrove. [2829

WANTED, Sturmey gear box, K.S., complete or incomplete.—Tom Purser, Law St., Leicester. [2438

DAYTON Lightweight wheel, tyre, tube, front forks, complete.—Wakelins, Norwich Rd., Ipswich. [2696

WANTED, Sporting Sidecar, Swan similar, suit Harley or A.J.S. chassis.—Heap, Barton, Sowerby Bridge. [2486

WANTED, A.V. Monocars and Tamplins, any condition; cheap for cash.—Write, A.V., 13a, Worple St., Mortlake. [3065

PREMIER parts or complete Premier motor cycles, in or out of repair.—Jack Ward, 11, Radford Rd., Leamington Spa. [2949

OLD Man Hep will buy anything motorish in any quantity.—19, Wilcox Rd., South Lambeth, London. 'Phone: 1958 Brixton. [2281

WANTED, ex-W.D. lamps, brackets, and spares for lamps.—Write full particulars to Advertiser, 59, Aytown Rd., Brixton, S.W.9. [3076

WANTED, Sidecar for 3¾h.p. Scott, good condition, all fittings for frame, etc.—7, Birkbeck Mansions, Birkbeck Rd., Hornsey, N.8. [2749

SCOTT coachbuilt sidecar, good condition and tyre essential, complete, appearance unimportant.—Jackson, Hillshoro, Westfield, Harpenden. (D) [2605

WANTED, water-cooled Morgan Sports; level exchange for Harley Combination, value £115; worth seeing, as new.—Harmer, 2, Church St., Kingston. [3295

WANTED, for countershaft Triumph, pair flywheels, driving side of crank case, and incomplete S.A. 3-speed gear box.—Hole, 129, Park Lane, Wallington. [3059

WANTED to purchase Outright for Cash, bankrupt stocks, W.D. spares, miscellaneous spares, motor cycles, any make.—Send full particulars McNeille and Platt, 57, Great George St., Liverpool. 'Phone: 1092 Royal. [7183

EXCHANGE.

DE DION, 2-seater, 8h.p., for combination.—226, Wick Rd., E.9. [2505

4-SEATER 12h.p. Alldays (see Car column).—63, Solon Rd., Brixton. [3608

8h.p. J.A.P. Cycle Car, good condition, exchange combination.—Knox House, Tonbridge. [2643

OIL engine for solo or combination; cash either way.—Shore, Aldbury, Tring, Herts. [2569

CHAPUIS-DORNIER 2-seater Car for combination; sell £80.—17, Upton Rd., Hounslow. [2463

EXCHANGES.—See Ariel, Bat, Hobart, Invicta, James, Scott and Miscellaneous columns. [3122

CHARRON 10h.p. Van, Bosch, Schebler, for solo or 3-wheeler.—1, South Ealing Rd., W.5. [3338

4h.p. Sports Zenith, posh, perfect; exchange lightweight.—26, Cornwall Rd., Brixton Hill. [3085

EXCHANGE 1915 7-9h.p. Indian, clutch, for lightweight and cash.—King, Egrove, Oxford. [3353

EXCHANGE shares for B.S.A. twin combination.—B. E., 5a, Victoria Rd., West Hartlepool. [3100

FRANCIS-BARNETT and Edmund (advertised); exchanges invited.—63, Solon Rd., Brixton. [3609

B.R.S. 3-speed Norton 1921, little used, fast; exchange or sell.—Williams, Pilton, Somerset. [3108

4h.p. Douglas Combination for Scott Squirrel or A.B.C. —46, Chesterfield Gardens, Harringay, N.4. [2642

EXCHANGE 1919 Powerplus Indian for A.B.C.; particulars.—35, Upper Tooting Rd., S.W.17. [2543

EXCHANGE 8h.p. J.A.P. for New-Imperial 2¾h.p.; sell £22.—72, Beechfield Rd., Finsbury Park. [3254

The Motor Cycle for the Masses.

QUITE a number of motor cyclists consider that the greatest future for the mechanically propelled two-wheeler lies along lines which differ considerably from existing designs. Whether or not this is the case only the future can decide, but it is an undoubted fact that there is an ever-growing demand for an ultra-light machine selling at a very moderate price.

A little thought will show that this demand is not merely the result of a momentary whim, but is the expression of a real want. There are thousands of potential motor cyclists who require to travel five or ten miles each way to business with an occasional trip to the golf course or a pleasure run into the country. At present this large section of the community is restricted to travel by tram, 'bus, tube, or pedal cycle, but would welcome a cheap and reliable form of motor transport.

Engines of 100 to 150 c.c.

The demand already exists, and it is a large and ever-increasing market. How, then, can we sum up the requirements of this class of rider? Briefly, the machine must be cleanly, reliable, economical in upkeep, easy to start and to handle in the thickest traffic, and, above all, it must sell at a very modest figure. As regards performance, speeds of above twenty miles per hour are not desired, and there will be no need of freak hill-climbing capabilities. A good two-stroke engine of 100 to 150 c.c. should be ample for all requirements, but a first-class clutch is essential, and possibly a two-speed gear will be demanded by many.

Already we have many examples of these machines in this country which have gone more than half-way towards the ideal specification, and the addition of a miniature engine bearing the name of a well-known proprietary house will do much to further the development of the type.

There are at present two schools of thought as regards the lines on which these tiny vehicles may develop: some favour the motorised pedal cycle and some the miniature motor cycle.

Miniature Motor Cycle or Motorised Bicycle?

While we incline to the latter type and feel convinced that therein lies the ultimate development, there is much to be said for the former, since it is capable of excellent propaganda amongst the large body of existing pedal cyclists and amongst the not inconsiderable number of people who would not care to ride anything which looks like a motor cycle. It is useless to deny that such a prejudice exists, and it can only be overcome by gradual education.

On the Continent the motor-assisted cycle has already arrived, and both in France and Germany a number of firms of the highest repute are engaged in turning out quantities, while special competitions for the type have already been organised and have taken place.

New Official Class Wanted.

In this connection the Auto Cycle Union might do well to encourage the engine of under 150 c.c. by the creation of a new class and the organisation of competitive tests. Our support of the ultra-lightweight needs no reiteration: at a time when the governing body was endeavouring to foster the now defunct scooter, *The Motor Cycle* urged the development of the miniature motor cycle, and, to encourage design, our proprietors presented the trophies for the first two events catering for machines of under 250 c.c. in the Tourist Trophy races. The Auto Cycle Union has now instituted a Trophy race for this class of machine.

An index to the advertisements in this issue will be found on the page facing the back cover.

The Non-Skid Machine.

AS I watched our leading experts slithering about in miry lanes during the recent Six Days, I wondered whether we devote sufficient study to designing a non-skidding machine. Personally, I am a clumsy rider on grease. I can hold most machines up anywhere, so long as I don't think about it; but if I once get wind up, it is usually only a matter of time till I fall off, and I fancy most hard riders would say the same if they could put their pride in their pockets, as pseudonymity enables me to do. On the other hand, I recall a certain Six Days in which the roads and weather were of the vilest. All the cracks kept falling off, and one or two actually retired because they were worn out and frightened, though these were not the reasons which they rendered officially. I started on that ride quite out of practice, in just the condition likely to provoke excessive "wind up." But I didn't skid, and I flared merrily over the terrible going without fear and without spills. For one thing, I was riding rather a woolly twin engine, which never yanked at its transmission. For another, the machine was extraordinarily well balanced, and had a pair of smooth brakes. For a third, the transmission was so gentle that it might be described as fluid. For a fourth, the wheels were shod with "combination" covers, in which steel studs alternated with very pronounced rubber corrugations. One does not hear of such tyres nowadays, because they are comparatively expensive and shortlived. But this year, as I have slithered and watched others slither, I muse whether we pay enough attention to a bogey which unquestionably

(i.) Deters many people from becoming motor cyclists.

(ii.) Keeps many motor cyclists at home when they would otherwise wish to take the road.

(iii.) Quite spoils a proportion of our mileages.

Bad Brakes.

ONE of the most fascinating items in the much-lamented A.B.C. motor bicycle was its braking. I only ran my sample about 3,000 miles—probably an insufficient distance to verify all the ins and outs of the layout. But during that period its brakes impressed me enormously. It is useless to possess smashing acceleration unless the deceleration is equally sound; and the A.B.C. would work up to sixty and down again to ten as rapidly and smoothly as anybody could desire, even the front brake doing its full share of the latter job without fuss or peril. To-day I own a still more modern machine of even greater speed proclivities. Its rear brake occasions a certain nervousness, for it has to be adjusted whenever I touch the rear chain, and the only lock on the adjustment is of a frictional character; this lock may slip and sometimes does slip, whereupon the brake still acts, but very feebly. The front brake is never much use, unless one has recently devoted much attention to it. It is always rough and noisy.. It is fond of shedding its small parts on to the road, a habit which will sooner or later despoke much of my front wheel. After a muddy ride it is usually seized in the permanently off position, and demands to be freed with a hammer and an oilcan. So I may be pardoned if I occasionally shed a silent tear when I reflect upon my departed A.B.C., for I have never since owned such a pair of brakes. But what has been, may be; and perhaps at the 1922 Olympia . . .?

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

A Ventilated Coat.

AN all-weather rider complains that there is still a gap in motor cycling tailoring. Whether the alleged waterproof coats will or will not keep out all the worst wet which falls between September and March is, he contends, beside the point. For if you have a genuinely drencherproof coat, it is probably ventilated by a few wretched little eyelets under the armpits; in which case the condensed moisture arising from your person completely outflanks the garment, and makes your underclothing moist when the outside atmosphere is possibly frozen dry. So his panacea is a really heavy but well-ventilated coat of a non-waterproof character, over which the invincible oilies may be donned when a cloud bursts. There is much sense in his contention. Last night I slept in a genuinely waterproof tent of green Willesden canvas. Outside, it froze. This morning there were tiny pools of moisture on the groundsheet all round the inside of the tent. My breath—evaporated, condensed, and finally drained down the tent walls. No, sir. *Not* beer. I scorn your insinuations. Besides, I had Ovaltine to drink with my supper. But to continue. There is no heavy, non-waterproof coat that I know of, created specially for motor cyclists. There are British warms, *toujours*. Burberry may have an approximately suitable garment—anyway, his waterproofs are better ventilated than most.

Service.

THE organisation of a service depot is always a thankless job. You have to carry thousands of pounds' worth of stuff, which may never be sold. You have to charge prices for them which nobody wants to pay. You have to deal almost exclusively with "rush" orders, which arrive at every conceivable hour of every conceivable day (*e.g.*, just as the depot is closing for Bank Holiday). Lots of these orders emanate from strangers and are unaccompanied by cash. One or two stupid clerks can earn you a bad name in

Occasional Comments.—

twenty towns during their first week on the pay list, and undo the effects of much work previously accomplished. So I am never in a hurry to criticise "service." But a Surrey rider has certainly had a roughish time. And all with London depots, too. His sidecar single broke an engine part, and the London depot mislaid the order. Meanwhile he took out his wife's baby two-stroke, which promptly broke a con-rod. Being a man, he pushed it home ten miles, and as the family possessed no spare transport and his daily work was urgent, he sent a man to the second firm's London depot, which had no con-rods in stock. They 'phoned their Midland factory, which was still mute five days later. In despair Surreyite borrowed his brother-in-law's baby two-stroke for one day, but tyre troubles prevented him from completing his round. Next day cycle, 'bus and train took seven hours to cover his 50-mile round. The following day no public transport was available for a very awkward round, and Surreyite stopped at home. The utility motor cycle, employed for business purposes, *must* be backed up by supreme service. *N'est-ce pas?*

Starting on a Small One.

I HAVE latterly been introducing a schoolboy to the sport, with the result that he has something to dream about, while I have something to pay for and something to write about. On one of his early trips he fell off twice, though he is an excellent cyclist. On both occasions he was alone on a decent road. The causes were manifold. Item, a 'bus which weighs nearer 3 cwt. than 2 cwt. Item, a clutch control destitute of leverage. Item, a gear lever which demands hard pushing from notch to notch. So I register mental notes that my next small pupil shall make his maiden adventures on a baby two-stroke with a feather-weight clutch lever and a snicky gear stick. Furthermore, the cash effects of his tumbles are noteworthy. The footrests, of course. Well, footrests are cheap; but frames are not. In this case the footrest spindle, instead of being pivoted *à la* Norton on a single tube round which it can swing when it hits the 'ard 'igh road at speed, is neatly threaded through prolongations of a duplex frame member. Result—these very gentle spills have thrown the entire frame right out of truth. To continue. Nothing looks nicer than a combined front-numberplate-cum-licence-holder. It also saves the new client from having to purchase a stick-on holder. Incidentally, as per spare part list, it costs 15s. to replace, and is of a contour which prevents it from being squashed true between two sides of a soap box inserted between vice jaws, when a tumble has likened it to the keelplates of a torpedoed liner. No. I am not spending 15s. on a posh new article. I am spending 2s. on a cheap licence holder, hacksawing the numberplate portion off the old original, and flattening it out true in the vice. These being hard times.

TWO WHEELS BETTER THAN NONE. There is a greater fascination in ploughing through moorland bogs on a motor cycle than the uninitiated may imagine; and furthermore, the motor cycle of to-day so lends itself to the task that such journeys may be completed much more quickly than by the only rival methods excepting flying—on foot or on horseback. J. C. Thomson, a Martinsyde rider, in the notorious Scott Trial.

"OVER THE ROOF OF SCOTLAND."

The Second Day's Run and the Results of the Scottish Two Days Trial.

THE first day of the Scottish Two Days Trial was fully described last week. Sunday was spent in Inverness, and the return journey, *viâ* Inverfarigaig and Kenmore, was made on the following day. Only Inverfarigaig caused any real trouble.

Saturday's gale had died down on Monday morning as the competitors left Inverness in the pale sunshine of 7 a.m. Thence the route by the south shore of the Caledonian Canal afforded all that could be desired in the way of moorland and forest scenery; but Inverfarigaig was looming near, and everyone had dark forebodings as to the existence of stunt checks. The first check was at the foot of the hill, the idea being, evidently, to avoid congestion, and though at any time a most difficult climb, the hill was really no worse, as regards surface, than in the six days event earlier in the year.

Inverfarigaig Casualties.

Of the solo riders, W. B. Anderson (A.J.S.), of the Cumberland team, was the first to fail. J. W. Morton (494 Douglas), got into the loose stuff on the second bend, and was unable to get away. S. L. Taylor (348 Invicta) also failed, while S. C. Hubbard (481 Scott Squirrel) skidded badly on one of the bends and stopped. The only Rudge-Multi competing was ridden by A. McGillivray, who found the appalling surface too much for him. Other failures among the solo riders were J. A. Porter (348 New Gerrard), A. B. Steven (349 A.J.S.), H. E. Horwood (498 Ariel), C. J. Blackadder (348 Verus), J. McEwen (349 Massey), and J. Donaldson (349 Royal Scot).

Good Ascent by Double-seated Sidecar.

The hill presented a much more difficult task for the sidecar drivers than for the solo men, since it was necessary to take the right-hand corners at full lock on a surface of ploughed up gravel and sand. The result was that the machines refused to answer to their helms, and as each contributed to the mangled condition of the road the climb became more and more difficult. H. Mortimer Batten (555 P. & M. sc.) just managed to get round the first corner by scraping the rocks, but got away safely. A. F. Sidford, whose 993 c.c. Matchless was fitted with a huge double-seated sidecar, made a good ascent. Considering the weight of his outfit, he rode with great consistency throughout the trial.

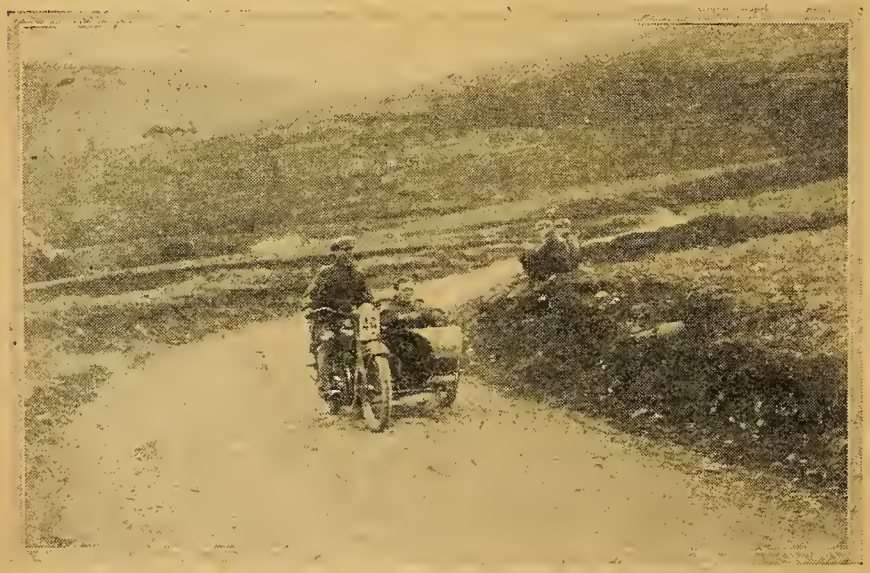
A. Shepherd (293 O.K.) dry skidding on Inverfarigaig, which accounted for most of the failures in the trial.

Tom Gillies (499 Sunbeam sc.), failed from lack of power. G. C. Procter (598 Beardmore-Precision sc.) went up well, as did the other members of the Precision team, thus attaining the distinction which was ultimately theirs—the manufacturer's team prize. James Alexander (976 Sunbeam sc.) made a very steady ascent, but J. G. Anderson (796 Ariel sc.) stopped at least once.

The Scott Sociable, driven by D. Rhodes, made on the whole a very good climb, but was unable to get round one of the corners owing to an insufficient right-hand lock. He was compelled to run back, and was recorded as a failure. W. Hiscock's Morgan was not equal to the climb. J. R. Alexander (733 Douglas sc.) also failed.

An Extra Six Miles.

The most difficult check of the trial succeeded this hill. The scenery over the deer forests to Kyllachy was grand beyond description, and wild deer were seen by several of the competitors. The check was six miles longer than the route card indicated, with the result that there was much hard driving over the final portion of the lumber-shattered moorland road. Many were late, but an allowance on time was given. The morning was one of short checks, and again none but the fastest machines had time to play with.



G. Grinton (998 Harley-Davidson sidecar) touring comfortably up Bridge of Avon.

Two Coventry Eagles, ridden by W. B. T. Sanderson and W. R. Bruce, going well on an observed hill in Saturday's run.

Lunch was at Kenmore, and immediately succeeding it came Kenmore Hill, the last observed hill of the trial. Consequently those who were still in for gold medals did not enjoy lunch as they might have done, for the hill was reported to be in very bad condition. Failures on Inverfarigaig were of no consequence except to the teams, as the climb was considered too freakish to figure in a capacity other than as a special award bit. As a matter of fact Kenmore was in reasonably good condition, and there were comparatively few failures. J. Donaldson (349 Royal Scot) lost the entire contents of his carburetter—lid, float, and needle—which had jolted out, and he left Kenmore regulating his petrol supply by manipulation of the tap. The task ahead of him was not an enviable one, and he did well finally to qualify for a silver medal. He was the first to fail on Kenmore. Among the sidecars Tom Gillies (499 Sunbeam sc.), and J. R. Alexander (733 Douglas sc.) were the only two unfortunate ones. On this hill the competitors again encountered a following wind, and many of the engines were pinking badly as the summit was neared.

The remainder of the route lay by Crieff, Sheriffmuir, and thence through Stirling and Linlithgow back to Edinburgh. The descents of Amulree and Sheriffmuir were rendered somewhat perilous by the greasy and treacherous road surfaces, and a strong smell of burning brakes and singed rubber pervaded the atmosphere. The course was liberally punctuated with stretches of rough, frame-breaking, colonial paths, and on one section of five miles several of the sidecars became literally bogged. By the time Edinburgh was reached, indeed, both riders and machines were plastered with mud, and presented a much weather-beaten appearance.

The Trial Summarised.

Thus, what might have been a test of endurance almost to the point of destruction, had the weather conditions followed Highland reputation for the time of the year, proved remarkable for its high percentage of premier awards. Saturday's gale was really the only weather condition which hampered the riders, and then only those of low-powered machines. All the observed hills were in good condition, but, nevertheless, the results are a high tribute to present-day machines. It was, however, noticeable at the final check at Edinburgh that numbers of the sidecar machines were out of track, and there was scarcely a machine which bore no scars of the gruelling through which it had passed.

The Beardmore-Precision was the only team to finish without loss of marks. The riders are to be congratulated on their steady and consistent performance. The team consisted of two B. & S. sports models and one 598 c.c. sidecar outfit.

Hugh Gibson (349 Raleigh), was perhaps the outstanding performer of the event.

The Scott Sociable proved speedy and consistent, and Sidford's two-seated Matchless put up a marvellously steady performance.

George Grinton's Harley-Davidson sidecar was far and away the fastest of its class. Would that all riders of fast machines were as considerate of other competitors as Grinton!

Results :—

MANUFACTURER'S TEAM PRIZE.

Beardmore-Precision (A. L. Clark, E. M. Wright, and G. C. Proctor).

CLUB TEAM PRIZE.

Edinburgh and District M.C.—George Grinton (998 Harley-Davidson sc.), Andrew Downie (A.J.S. sc.), and Major Johnstone (Jowett light car).

PREMIER AWARDS.

J. W. Burton (348 Coventry Eagle), *W. B. Anderson (A.J.S.), J. Hendrie (499 Sunbeam), G. Hope Wilson (349 B. and S. Edmund), *J. W. Morton (494 Douglas), G. Denley (211 Velocette), A. L. Clark (349 B. and S. Precision), E. M. Wright (349 B and S Precision), W. J. Knight (499 Triumph), Jas. Bacon (490 Norton), W. Westwood (499 Triumph), George Cheyne (499 Sunbeam), W. Cheyne (499 Sunbeam), J. G. R. Edmondson (248 Massey-Arran), L. Edmondson (248 Massey-Arran), W. B. T. Sanderson (348 Coventry Eagle), A. T. Ure (499 Sunbeam), W. T. Bridge of Avon was hardly worthy of observation, nobody having any real difficulty with the climb. A. L. Downie (349 A. J. S.) on the upper and less steep portion.

IGNITION TIMING.

Notes for the Novice with Special Reference to the Timing of Two-stroke Engines.

IT has frequently been noticed by the writer that the method of ignition timing usually suggested does not always give the desired results, particularly in the case of the two-stroke engine.

The following notes are written in the hope that users of this type of motor cycle who are obtaining indifferent running will be enabled to improve speed, power, and economy considerably.

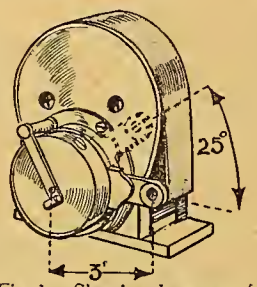

Fig. 1. Showing the range of control on a standard magneto.

Full Advance as a Basis.

Usually, regard is given to the range of control provided on the magneto, which varies with different makes, but 25° to 30° angular motion can be taken as a good average. In any case, the retard position is the wrong end to start with, and correct timing should consider only the full advance, leaving the other to occur where it will.

At this point we might refer to the common idea that an earlier timing is necessary for two-stroke engines than for four-strokes. Why this should be necessary is never explained, but the misconception is probably due to the error of assuming that an equal amount of advance on the handle-bar control produces identical results on the point of ignition in both types, whereas, owing to the different gear ratios in the magneto drive, the spark receives twice the amount of advance in the four-stroke as compared with the other, which is handicapped accordingly, and thereby creates the impression that earlier timing is necessary.

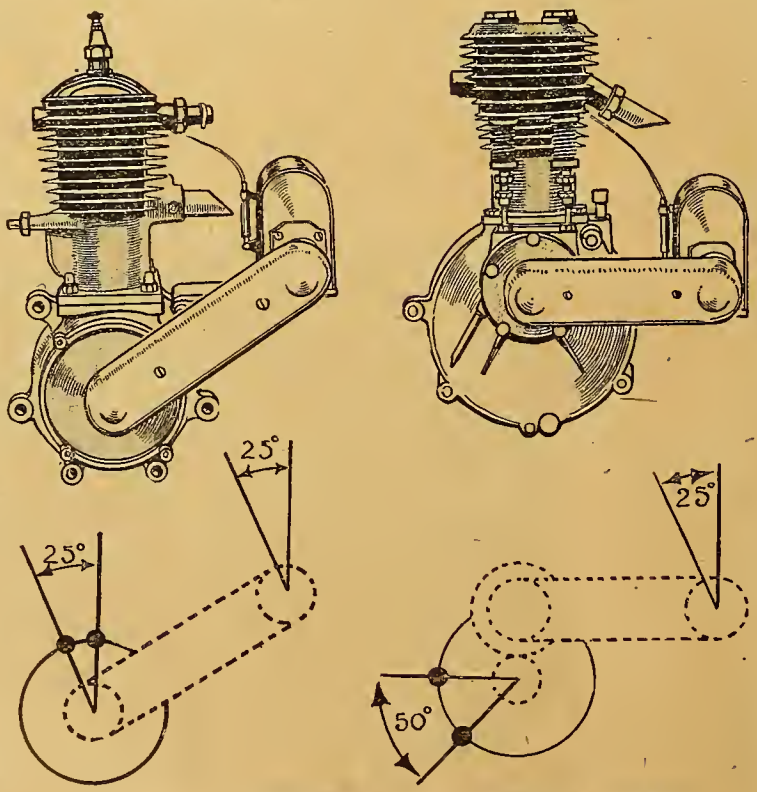
Turbulence.

Correct timing in any type of engine is influenced by several factors, including shape of combustion chamber, velocity of gases, quality of mixture, and degree of turbulence—the latter being probably the most important. Thus it will be seen that it is quite possible for some four-strokes to require an earlier timing than two-strokes.

Considering now the differing gear ratios in the magneto drive and their effect on piston travel in relation to the spark position, the great majority of four-stroke engines drive the magneto *via* the camshaft, which, of course, runs at half engine speed, whereas in two-stroke engines not possessing a camshaft the drive is necessarily from the crank direct.

For the purpose of illustration, we will assume the length of magneto control to be 3in. (Fig. 1), and the diameter of crank pin path to be also 3in. (the exact diameter does not matter, as angular motion will be considered). If the lever be moved through 25° from full retard to full advance, the crank pin of a two-stroke will also move through an angle of 25° in order that the contacts shall break at both these two extreme positions, as both the crank and magneto armature run at the same speed. In the case of the four-stroke, however, the crank pin will have to travel through twice the distance, owing to the fact that the magneto is geared down two to one (Figs. 2 and 3). The net result will be that when the handle-bar control is moved to full advance the spark will occur much earlier in the compression stroke in the latter case, and it therefore follows that many two-strokes are handicapped by late ignition timing unless steps are taken to rectify the matter.

From Fig. 4 it will be noted that 25° before top dead centre on 75 mm. stroke, say 3in., is equivalent to $\frac{3}{16}$in. piston travel, which is insufficient, while 33⅓° gives $\frac{5}{16}$in piston travel, which is approximately correct for both types of engine for ordinary touring speeds.



Figs. 2 and 3. Two-stroke and four-stroke magneto drives compared.

As before mentioned, the only logical and correct method of timing is to consider the piston travel before top dead centre in its relation to the full advance position of spark, which, of course, controls the efficient running of the machine on the road, and again obviates the possibility of error due to the differing range of control provided on various makes of magnetos. The retard is of small importance in comparison, and is usually

Ignition Timing.—
only required for very slow running, and, in some cases, for starting up purposes.

The writer recently re-timed his two-stroke on these lines, and transformed the running altogether, the result being increased speed, more power on hills, and a smaller jet could be used without "popping" back through the carburetter.

Timing Marks Wanted.

It would be a great improvement if makers of engines with outside flywheels would mark the correct timing on the flywheel in the same way that is done on car and lorry engines. (Most motor cycle engines with outside flywheels are not fitted with keys in the shafts, hence this suggestion is only capable of limited application. —Ed.) It would cost practically

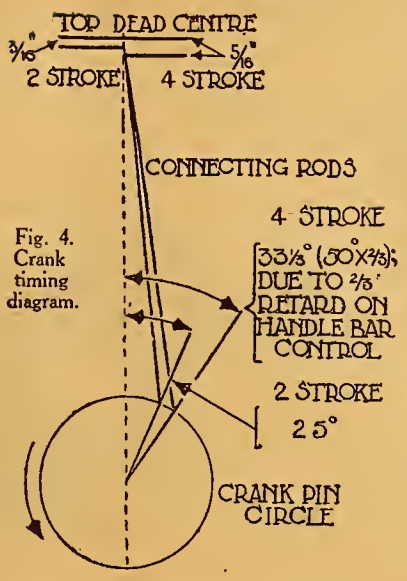


Fig. 4. Crank timing diagram.

nothing, and would enable the user to tell at a glance whether his engine had been re-assembled correctly after overhaul, and save much time and trouble in the cases where the magneto sprocket has slipped, which latter mishap is rarely detected by the amateur rider.

Incidentally it may be stated that slight movement of the magneto driving sprocket upon its shaft is by no means uncommon, and it should be suspected in all cases where a two-stroke suddenly develops an otherwise incurable fit of misfiring.

Experiment as True Guide.

To conclude, it must be understood that the measurements given are approximate and would vary for differing sizes of engines and speeds desired, the best results being obtained from experiment. J. McI.

FRANCE AND THE MOTOR CYCLE.

Reasons why France is not in the Forefront of the Motor Cycle Industry.

IS it not strange that the vigorous and versatile mentality that has produced cars second to none in the world, in the moderate-powered class, should apparently be incapable of manufacturing practical motor cycles in competitive quantities?

A tour on the roads of France or a stroll down the Avenue des Champs Elysées, the Avenue de la Grande Armée, and the Boulevard Péreire in Paris, both reveal the same thing, namely, a large number of British and American machines and the increasing popularity of the pastime. The technical journals devoted more or less to motor cycle interests also show the same thing, and the dealers themselves all admit sadly that La France marches far behind England in motor cycle construction. But they do assert that she marches, and the inference is that, with characteristic optimism, they assume that she will eventually surpass rival nations.

They admit that British medium- and heavy-weight single-cylinder machines are the best in the world, partly because the logic of facts will not allow them to deny it; but in their view the lines along which we have developed these machines are wrong.

French Logic.

Large single-cylinder machines, with their comparatively harsh and uneven propulsive effect, are far from ideal, and satisfy few motor cyclists' deepest desires. Is it not more logical, the French argue, to make up one's mind as to what is wanted and then to aim straight at it, without going off after a type that is likely to be a compromise falling far short of one's ideals? Are not all such lines of development certain to lead only into a blind alley?

Thus a machine such as the Scott generally excites more enthusiasm in the breast of the average Frenchman than the best of single-cylinder four-stroke mounts built on conventional lines. Yet if he is a buyer, he will not allow his choice to be swayed by this feeling of enthusiasm alone, but rather by results.

It is said that one cannot have too much of a good thing, but logic can be carried too far, and may lead to failure instead of success, especially when there is a slight kink in it; thus there is one tenet of the French faith on which most of their reasoning is based, namely, "we are the cleverest people in the world."

Aiming at the Ideal.

Now the fact that the French have not yet been able to excel in motor cycle construction appears to contradict this proposition, and the only answer that they can make now is, "our competitors are really on a side track: we shall be first in the field with something that will come near to the ideal.

Therefore, one looks for originality from France. Will the forthcoming Paris Salon reveal much of it? At present it is doubtful. French conservatism is very strong and a powerful factor militating against development on unorthodox lines, as has been very evident in the car world, and attempts at producing something on ideal lines have hitherto been unsuccessful. However, where demand exists supply must follow, it is argued; and the demand for motor cycles in France is at present being filled from other countries, in spite of tariffs and adverse rates of exchange. Therefore, it is practically certain that something will be done in the near future, and that our Allies across the Channel will produce machines that will be better than any that they have made hitherto; and, if the present conditions of exchange and tariff continue, they should be able to compete in the British market.

There is one factor in the case which is of great importance—that is the fact that those who interest themselves in motor cycle manufacture do not ride the machines they make.

ADVANCE DETAILS OF 1923 DESIGNS.

REVIVAL OF AN ORIGINAL TWO-STROKE.

Cedos Machines for 1923. Detachable Head on a Two-Stroke Engine.

THE Cedos two-stroke was obviously too good to go under when the company went into liquidation. Production has now commenced again—in new hands, excepting the designer, Mr. Ernest Smith—and improved 1923 models will be exhibited at the Paris Salon and the Olympia Show.

The engine has been considerably altered, and now represents very advanced practice in two-stroke design. That it has a detachable head alone places it in a class by itself. It is claimed that for this reason distortion is less likely to occur, the cylinder casting being of uniform thickness around the firing chamber. Sparking plug and release valve are carried in the head, which is copiously finned with particular regard to guiding air currents on to the plug. A very cool-running engine has resulted.

The cylinder dimensions are 67 × 70 mm. (247 c.c.).

In order to make replacements easier the crankshaft is in two pieces, bridged by a hollow crank pin, carrying Hoffman roller bearings, the big end, like the crank pin, being hardened and grounnd. The main shafts run in double row journal ball bearings and long phosphor-bronze compression retaining bushes. Spring clips in grooves retain the floating gudgeon pin in the light piston.

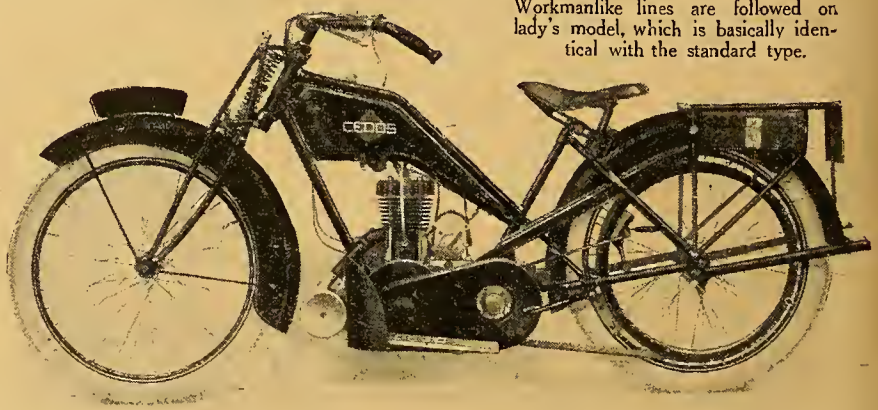
Crankshaft Machined All Over

Every reciprocating and rotating part of the engine is machined all over so exactly that it is unnecessary to balance each engine individually. In the same way no rough surfaces are left to collect carbon in the cylinder or the ports.

A specially-designed carburetter is used which goes a long way to eliminating four-stroking.

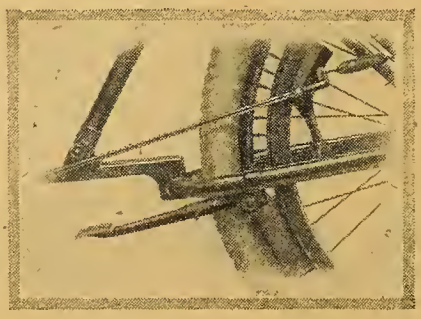
Since the aluminium expansion chamber is eleven times the piston displacement of the engine, noise has been reduced to a minimum.

Lubrication is of the suction drip-feed type direct to the cylinder, special attention being paid to the internal distribution of the oil.



Workmanlike lines are followed on lady's model, which is basically identical with the standard type.

Frame, tank, and cycle parts generally are of workmanlike design; everything on the machine except the magneto and gear box (a Sturmey or Moss three-speed) is made in the company's own works, which ensures homogeneity of design The spring fork has been improved and a neat and comfortable type of semi-T.T. handlebar evolved, as an alternative to the touring type. Naturally, the distinctive Cedos under shield is fitted, although the shape has been modified.



Both brakes act on the belt rim.

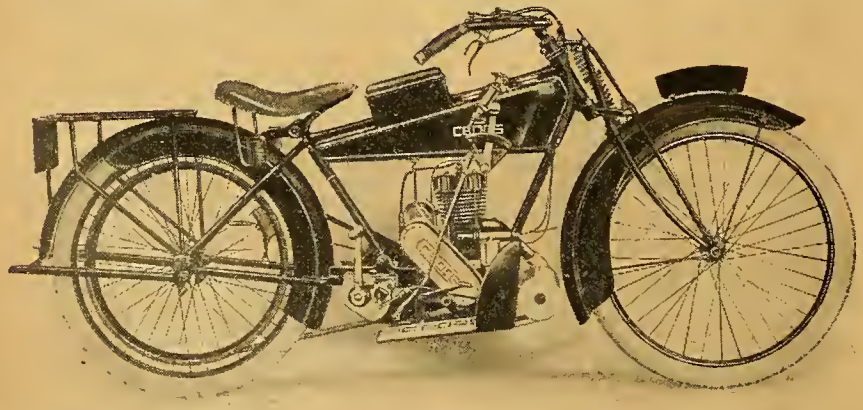
Detail Improvements.

Other 1923 improvements include a cam adjustment on the gear box bracket for the primary chain, an internal and an external brake, both on the rear wheel belt rim, and an enamelled-steel chain and flywheel cover.

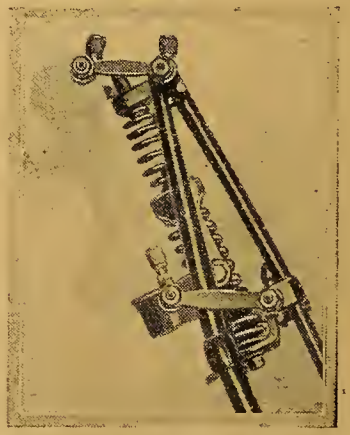
A lady's model is also marketed. In this case the top tube is dropped, necessitating an alteration in the shape of the tank, and 24-in. wheels are fitted instead of 26-in. The over-all weight is only 2 lb. more than the standard machine, which turns the scale at the remarkably low figure of 148 lb.

The finish is now all black, thus ensuring complete weatherproofness. The prices are £60 for the open-frame machine and £2 less for the other.

The makers are the Cedos Engineering Co., Ltd., Northampton.



By reason of the detachable head the Cedos two-stroke rather resembles, at a first glance, a four-stroke.



Re-designed front forks which damp out shock and rebound.

Advance Details of 1923 Designs.—

TO CONVERT THE PEDAL CYCLIST.

Strongly-built 116 c.c. Miniature Produced by Bowden Wire, Ltd. Novel Friction Transmission.

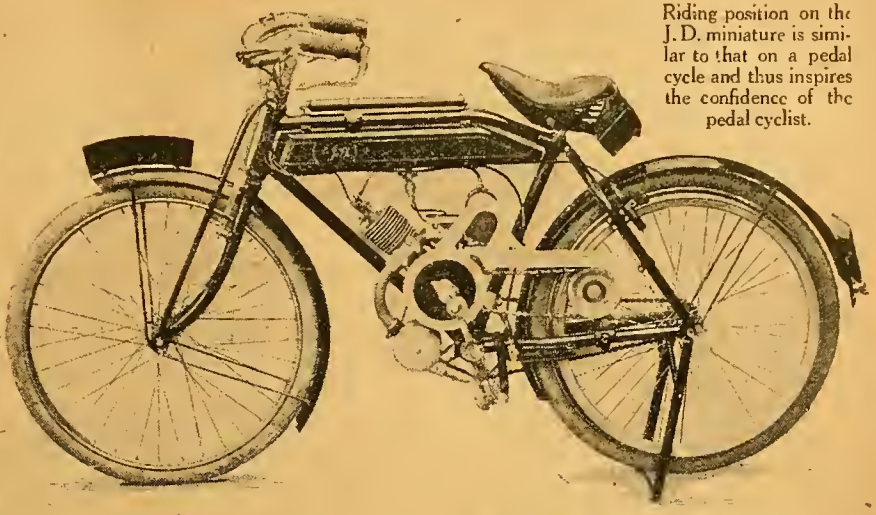
AT a first glance at the J.D. motor cycle (a new product of Bowden Wire, Ltd.), one is inclined to say, "Ah, another motorised bicycle!" But one very soon alters that opinion; and the more the design is studied the more it is admired.

An attempt has been made to do something that has never been done before, *i.e.*, to evolve a self-propelled vehicle that will, by reason of its similarity to an ordinary bicycle and its simplicity, attract the pedal cyclist, but to design and build it with the same care and thoroughness as are bestowed on the most expensive machines of to-day. For this reason it is not cheap, in any sense of the word. It has not been built down to a price; "everything of the best" was the producer's motto, and it was then estimated that the cost would be £40.

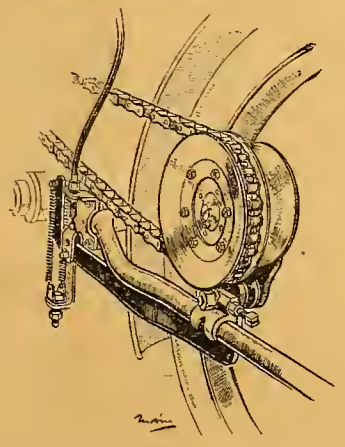
Only Superficially like a Pedal Cycle.

The resemblance to a motor-assisted pedal cycle is merely superficial. The frame, which has a sloping top tube, is amply strong enough for the roughest use in the hands of the novice; double-butted tubes are used where possible. After considerable experiment spring forks were discarded as unnecessary, a rigid girder type being fitted.

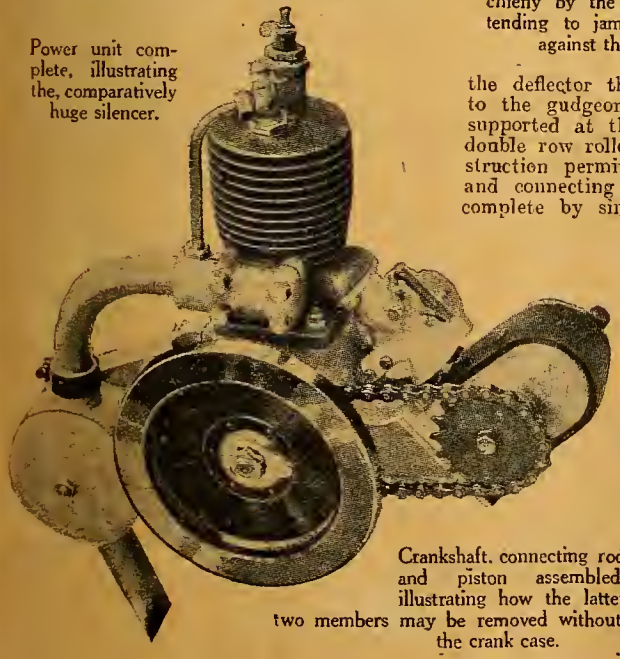
Orthodox three-port design is followed in the 116 c.c. (51 × 57 mm.) two-stroke engine, which, however, is notable for the excellence of its finish and the fine limits to which its component parts are made. Instead of being in front, the transfer port is at the side of the cylinder,



Riding position on the J.D. miniature is similar to that on a pedal cycle and thus inspires the confidence of the pedal cyclist.

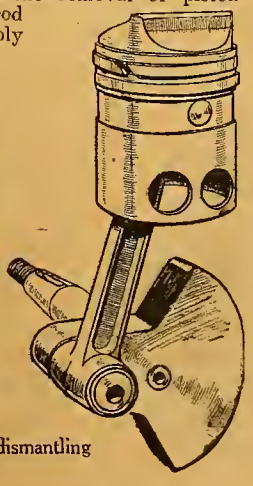


Friction transmission is used which by the Bowden mechanism shown provides a clutch and free engine. Contact pressure is gained chiefly by the pull of the driving chain tending to jamb the small friction disc against the flange on the wheel.



Power unit complete, illustrating the, comparatively huge silencer.

the deflector thus being at right angles to the gudgeon pin. The crankshaft is supported at the flywheel side only—on double row roller bearings—and this construction permits the removal of piston and connecting rod complete by simply sliding them off at the big end, of course after the cylinder and crank case cover plate have been removed—the latter to allow sufficient clearance. Accessibility is a feature generally.



Crankshaft, connecting rod and piston assembled, illustrating how the latter two members may be removed without dismantling the crank case.

A very large silencer is fitted, this, like the other aluminium portions of the machine, being a die casting.

Magneto and transmission sprockets, together, are bolted on to a spigot on the inner side of the outside flywheel, which itself is keyed on to a taper on the main shaft.

Simple and Effective Friction Drive.

Friction transmission is employed. Carried on a bracket pivoted on the rear stays is a sprocket, driven by the engine, and a U-shaped disc of a special friction material, which makes contact with the inside of a U section flange bolted to the rear wheel. To de-clutch, the driving disc is simply swung clear by a Bowden lever on the handle-bar acting against two fairly light coil springs. Sufficient pressure to gain a non-slip contact in all weathers is gained chiefly from the tendency of the driving member, helped by the pull of the driving chain, to jamb forwards. In practice this works admirably. The gear ratio is between 9 and 10 to 1. The system has the additional advantage that in free engine (held out by the usual handle-bar ratchet clip) no friction is caused by any transmission members revolving; coasting is thus as free as on a pedal cycle. The detail design, and workmanship, as in the power unit, are very fine.

Endless chains are used for the magneto and transmission, adjustment being gained by sliding the whole engine unit up the front tube. To accommodate this movement the rear engine lug embodies a swinging link.

Pedalling gear is fitted, the chain adjustment in this case being in the eccentric bottom bracket, thus leaving the transmission centres undisturbed.

Equipment and Controls.

An aluminium guard protects the driving and magneto chains, and fairly wide and amply strong mudguards with number-plates are standard. The equipment throughout is of the first quality,

Advance Details of 1923 Designs.—down to a Lucas Girder spanner in the tool kit.

There are only five control levers—front and rear brake (the latter of neat but most effective design working in the transmission rim), throttle of single lever carburetter, "clutch" (or free engine), and decompressor. "Petroil" lubrication and fixed ignition all tend towards simplicity.

The tank holds six pints of fuel, sufficient for 100 miles or so. All on, the machine weighs about 80 lbs., but the designers wish it to be made clear that no attempt has been made to obtain a low figure here. Rather, the weight figure simply "happened."

Extended road tests for three years have failed to find any weak spots, and the road performance without pedal assistance is remarkably good.

It will be most interesting to see how the public receives this miniature, for it will readily be admitted that the policy which inspired it is a most courageous one, in these days of price reduction.

---

750 c.c. TWIN TWO-STROKE.

A Vertical Twin Sidecar with Three Speeds and Reverse to be at Olympia

BLERIOT FRERES, the well-known manufacturers of aeroplanes, motor car head lamps, dynamos, etc., have for some time been testing an entirely new model twin-cylinder two-stroke machine designed primarily for sidecar work. Although the engine is but of 750 c.c. capacity it is rated, in France at any rate, at the rather high figure of 8-10 h.p., the bore and stroke being 70 mm. × 96 mm.

This new model resembles the smaller Bleriot twin-cylinder four-stroke machine which has now been in commercial production for nearly three years, but possesses several novel and distinctive features. The clutch, of the disc type in which eleven discs are used, is contained within the flywheel, which is located centrally between the two cylinders, and these, as will be seen from the illustration, are spaced apart somewhat more widely than is usual in the case of vertical twin-cylinder machines. For the purpose of induction the two compression tight compartments of the crank case are located one on each side of the engine, and furthermore the casting is ribbed to assist cooling.

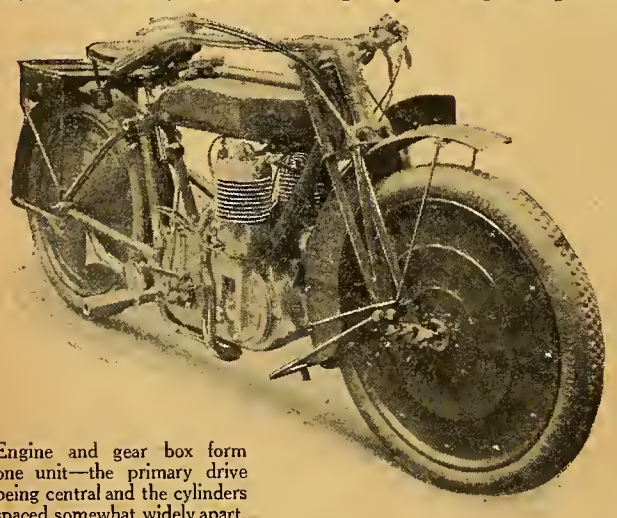
Unit Construction.

The three-speed gear box forms a unit with the engine, and an unusual feature is the provision of a reverse gear in addition to the three forward speeds. The change speed is effected in a novel and ingenious manner, the lever having only two positions on the quadrant, but also a vertical movement. In its normal position it operates first speed and reverse, a catch being provided which must be released before the lever can be made to bring the reverse into operation. For second and third speeds the lever must be pressed vertically downwards about three inches; it is then in position for bringing these two gears into action. All the rods controlling this gear are made adjustable, and the whole arrangement is actually less complicated than might be supposed from a brief description.

An advance 1923 model Bleriot. It will be seen that it is quite a compact machine. Observe the very small reduction in ratio of the driving and driven sprockets.

The petroil system of lubrication is used for the engine, grease, or a mixture of grease and oil, being used in the gear box. Dual clutch control is provided, and a kick-starter operates on the primary shaft of the gear box. Although final belt drive is shown in one illustration it is understood this machine will also be made with chain transmission.

The front forks and the frame generally are of substantial construction, the former being well provided with lubricators. A semi-cantilever type spring seat pillar is used and a front stand is fitted, though this latter looks somewhat fragile judged by British standards. An improvement in the arrangement of the exhaust pipes will be incorporated in later models in which a V-shaped union leads away to a centrally placed pipe passing between the double down tubes of the frame to the silencer underneath, which gives a neater and more symmetrical appearance to the machine. We understand that this machine will make its appearance in London at the November Show.



Engine and gear box form one unit—the primary drive being central and the cylinders spaced somewhat widely apart.

A very interesting "sports" type modification of the standard twin-cylinder four-stroke machine is also being produced for the coming season, and will be shown at the Olympia Show.

As in the case of the standard model the two cylinders, 60 × 88 mm. bore and stroke, work on the same crank, but in the sports model the heads are detachable and of true hemispherical form, with overhead valves operated by push rods and rocking levers, the former being placed side by side centrally in between the two cylinders, those for the exhaust in front and those for inlet at the back. This valve gear has been particularly neatly carried out, and the engine presents a thoroughly workmanlike job. As in the case of the standard model three speeds are provided, the camshaft which operates the inlet valves being arranged to serve also as the primary shaft of the gear box. The gears are always in mesh, changes being effected by means of selective dog clutches.

Not for Racing.

It should be added that this machine is intended simply as a "sports" model for use by the general public, and not specially for the most strenuous racing events, in which it is realised that a constant mesh gear box would probably be unsuitable. The new engine, we are informed, has done well over 4,000 revolutions and performs very satisfactorily on the road.

The standard touring model is now being marketed at a very interesting price, 3,975 francs in France, or £68 10s. at the present rate of exchange.

Advance Details of 1923 Designs.—

THREE SIZES OF VILLIERS ENGINES.

147 c.c., 250 c.c. and 343 c.c. Models with Flywheel Magnetos. A Miniature Engine which is by no means a Toy.

IN the world of two-stroke engines no proprietary manufacturers are more celebrated than the Villiers Engineering Co., Ltd. Its latest productions are always eagerly watched by two-stroke enthusiasts, and the range which it is proposed to market for 1923 is of peculiar interest, in that a tiny 147 c.c. model is to be included.

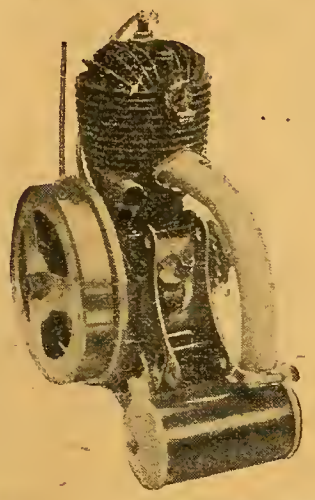
Three types will be manufactured, the capacities being approximately 150, 250, and 350 c.c. These three models have many features in common, including, of course, the Villiers flywheel magneto, which can, in addition, be used as a lighting set, if required.

Externally, the most obvious change is the position of the induction pipe, which is now cast integrally with the cylinder barrel and lies in a convenient position on the flywheel side with the carburetter facing forward; also the arrangement of the cylinder head cooling in which the inclined longitudinal ribs each spring from the cylinder head itself, so that the maximum possible cooling surface for the given type of cylinder head is obtained.

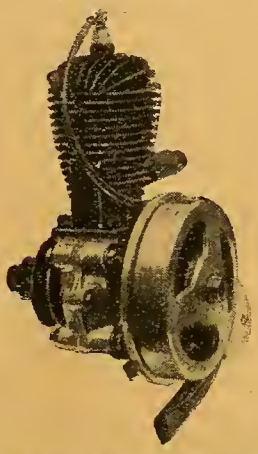
Cylinder Alterations.

Cooling has received particular attention, and, in addition to the excellent rib design, the cylinders have been thickened up to sensible proportions, with the result that the manufacturers assure us that any possibility of drying up, except owing to faulty plugs, has been eliminated. All ports which are of large dimensions are bridged to prevent damage to piston rings, and the exhaust pipe is led away at an angle so as to avoid fouling frame tubes; in addition, the silencer has been somewhat enlarged. The improvements which have been incorporated are such that the new 250 c.c. engine develops 25 per cent. more horse-power than the previous engine of larger capacity.

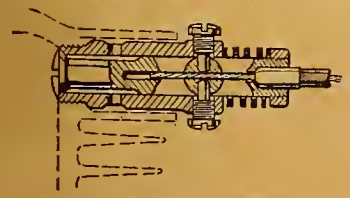
To go into details, one feels inclined to deal first with the miniature model, which has a bore and stroke of only 55 × 62 mm. (147 c.c.). It may well be found that this tiny power unit, with its self-contained flywheel magneto, may become a forerunner of the lightweight of the future, or what is more popularly termed "the motor cycle for the million." One is apt to consider such a tiny engine as a toy, but we can give a personal assurance that it is nothing of the kind; it is a pleasingly constructed miniature which produces wonderful power for its size. We rode a motor cycle, of normal size and construction, fitted with a two-speed gear box, and the new 147 c.c. Villiers engine. The power and speed of this outfit were quite remarkable, and the top gear ratio of approximately 6⅝ to 1 is by no means so low as to feel ineffective. The little engine is capable of propelling a rider of normal size and weight at quite 25 miles an hour, and of ascending normal hills on the same gear ratio, while its tiny proportions and excellent balance render it to all intents and purposes vibrationless. It will be no surprise to us to find that in the near future a large number of miniature motor cycles are fitted with this engine, and a suitable two-speed gear, since such a combination would be ideal for the average person who requires to travel short distances regularly, while it is particularly suitable for ladies' use.



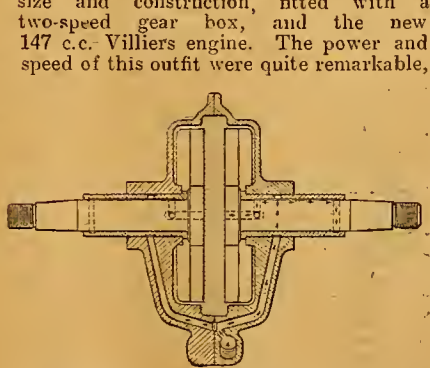
The new 343 c.c. Villiers engine has a notably large silencer.



The miniature 147 c.c. unit, an idea of the size of which may be gained from the (standard) sparking plug.



Leverless release valve on the 147 c.c. Villiers. The cable is anchored to a stop and the casing lifts the valve.



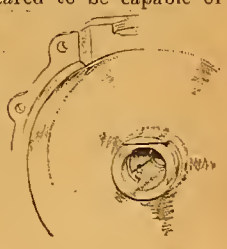
Diagrammatic section of the Villiers suction lubrication scheme.

Petroil Lubrication on Miniature.

The 147 c.c. Villiers is lubricated on the petroil system, but the larger models are supplied with oil in a most ingenious manner. The system may be easily followed by reference to the attached illustrations, which show diagrammatically the path of the oil. Oil is fed through a hole in the back of the crank case casting, whence special leads conduct it to the long plain crankshaft bearings. The longitudinal groove distributes the oil throughout almost the entire length of these bushes, a retaining groove being formed at the outer end, while a groove extending for approximately half of the circumference of the bush is formed at the inner end. On the upstroke of the piston, when there is a partial vacuum in the crank case, this semi-circular groove registers with a radial hole in the crankshaft, which is in connection with the crank case by a hole concentric with the shaft; thus, during the suction stroke, oil is induced into the crank case, but just before any positive pressure is present the radial hole in the camshaft leaves the semi-circular groove and cuts off the oil-flow, preventing blow back through the passages. To prevent any possibility of the bushes turning and thus interfering with the timing of the lubrication system the bush flanges are cut away so as to register with the projecting tongue on the crank case bosses.

For Light Sidecar Work.

As regards the largest of the three models rated by the manufacturers as 3½ h.p. and having a bore and stroke of 79 × 70 mm., we took the opportunity of a short road test of this machine with a light but fully equipped sidecar attached. It is sufficient to say that with a two-speed gear it appeared to be capable of



Arrangement of oil grooves in the main bearings. and the bush positioning tongue.

Advance Details of 1923 Designs.—taking its rider and passenger anywhere that a reasonable motor cyclist would expect to go, and to be entirely free from any symptoms of drying up even under prolonged hard driving. It was possible to open the throttle almost fully on open roads, and to leave it in this position for a considerable length of time without any noticeable falling off in power output. It must not be imagined, however, that the machine is slow, for we are informed that with a sidecar it is capable of over 40 miles an hour, and we should judge that this statement is within the fact.

NOTTINGHAM ACTIVITIES

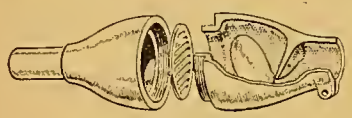
A SHORT tour of inspection of Nottingham is particularly interesting at the present time since, as a result, one is able to forecast in some small measure the probable developments from this city for the year 1923. The general public do not realise how important a centre from the motor cyclist's point of view is Nottingham, yet there are quite a number of manufacturers who influence the state of the industry to no small degree.

The 80 m.p.h. Brough Superior.

Mr. George Brough is busy with his new S.S.80 model, the prototype of which was seen in the recent A.C.U. Six Days Trials. Very few modifications have been found to be necessary, and the machine is already available in 1923 state. It will be remembered that by employing a curved rear frame lug the saddle position has been brought 2in. further forward and lowered by the same amount, so that in effect the latest Brough Superior carries a big twin engine in a frame but little larger than that of the normal machine with 350 c.c. engine.

In spite of the fact that the S.S.80 is in effect a fast sports mount, and carries a guarantee of 80 miles an hour, it is a thoroughly practical fast-touring machine, and all essential fittings are present in highly specialised forms. For instance, the tool bag behind the saddle tube is sufficient to carry all necessary tools and spares, while the very large pannier bags are of ample size to carry necessities for a night's stay.

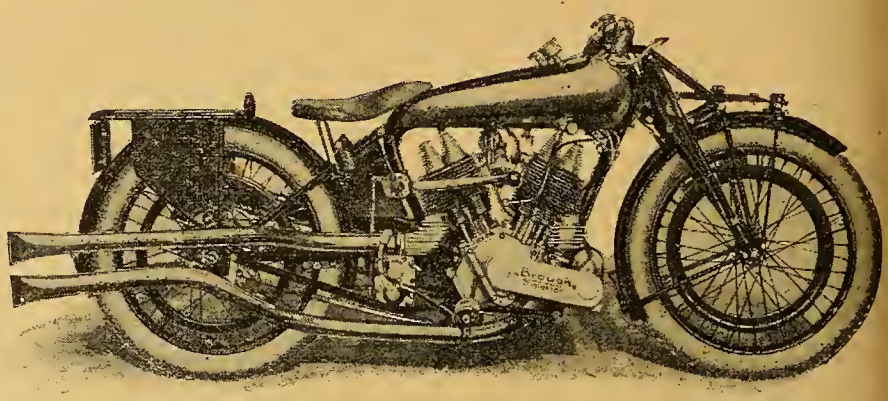
An ingenious detail is noticeable on the front end of the carrier, where a small



Expansion chamber of the Brough Superior which can be taken apart for cleaning purposes.

loop is formed which may be used for lifting the machine on to the stand, and also serves to prevent packages attached to the carrier from working forward into the rider's back. The latest J.A.P. engine has proved particularly satisfactory, and the cast aluminium exhaust elbows give a very distinctive appearance to the whole machine. Perhaps one of the most important features of the new Brough is the employment of tie rods between the lower part of the crank case and the rear spindle. This idea is by no means new, but Mr. Brough informs us that it has had a wonderful effect on the steadiness and controllability of his machine.

Lubrication has been somewhat modified, there being a gravity feed to the back of the front cylinder, while the existing handle-bar control pump is connected to the engine *via* the camshaft. This feature has been included owing to the fact that the double concentric springs on each valve impose considerable loading on the cam gear, which, however, is satisfactorily silent. Further modifications include a stiffened tank, larger rear brake-shoe, and an internal expanding front brake.



Imposing lines are followed in the "S.S.80" Brough Superior, which, minus its silencers, looks most businesslike.

Campion Frame Improvements.

Though the specification of Campion models which will be manufactured in a wide range remain much as before, there will be detail changes which will affect the appearance of the machine to a considerable degree, the frame being altered in such a way as to provide a very neat and compact appearance. On the occasion of our visit we were able to inspect a very handsome sidecar taxi which is being supplied to Luton. The outfit is propelled by a 976 c.c. J.A.P. engine, with Sturmey-Archer gear and quick detachable wheels, the cab body being excellently finished and perhaps the most roomy and comfortable which we have ever seen.

Sturmey-Archer Gears.

The latest models of Sturmey-Archer gear have already been described in the pages of *The Motor Cycle*, and it is sufficient to state that the extremely neat new gear box is beginning to make its appearance in quantity. Its appearance has been improved and its weight reduced by the incorporation of a kick-starter without the use of additional wheels, while the box itself is more compact and the new shock absorber in the clutch has proved most satisfactory. This point we have been able to check from personal observation since a short run on a machine so equipped proved that the semi-pneumatic rubber absorbers take the snatch out of the drive in a most satisfactory manner even at quite low speeds. With a single-cylinder engine the snatch, which is usually apparent, is softened to a wonderful degree.

Jardine 4-Speed Gear.

The Jardine 4-speed gear box has undergone small but important modifications in the control gear which renders the process of changing speed more positive. This well-known gear has done much to popularise the 4-speed box, and one of its important features is its silence in action.

A New 500 c.c. Brough.

Mr. Brough, sen., will have a new line on exhibition at Olympia, which will consist of a 500 c.c. flat-twin sidecar outfit with side-by-side valve gear. It will probably be sold at the unusually modest price of 100 guineas complete. In effect this engine embodies the crank case, camshaft, etc., of the present sports model, but will be fitted with cylinders similar to those of the well-known 692 c.c. Brough, though somewhat shorter, the bore and stroke being 70×64½ mm. This machine, for a flat twin, will have a short wheelbase, and will be thoroughly well equipped with three-speed Sturmey-Archer gear and comfortable sidecar. The sports model of the same bore and stroke will, of course, be shown. It has undergone slight modifications only, the chief of which lies in the substitution of roller bearing big ends for plain big ends. In addition to this, the valve ports, which have previously been detachable, will be cast in one with the cylinder head. This sports model will be fitted with close ratio Sturmey-Archer gears, clutch, but no kick-starter, and it is probable that it will carry a guarantee stating that it is capable of 75 to 80 miles an hour (the exact figure has not yet been definitely fixed). Both models have chain drive throughout.

ENTHUSIASTS ON HOLIDAY!

(See page 452.)

Words are inadequate in describing the difficulties of the Scott Trial, but these pictures certainly help! (1) Although the Scar was probably the least easy test of the event it appears child's play compared with what follows. (2) G. Clapham (532 Scott) ploughing through a deep and dirty bog. (3) C. S. Burney (349 Beardmore-Precision) in a very minor water-splash. (4) In a major water-splash—the River Nidd. J. M. Davies (481 Scott Squirrel) plunging through amid clouds of steam while a less fortunate Sunbeam rider wades out.

Road Tests of New Models

The 595 c c. New Hudson Sidecar Outfit.

SPECIFICATION.

ENGINE: Single cylinder (87 × 100 mm. (595 c.c.).
TYRES: 700 × 80 mm.
GEAR BOX: Sturmey Archer three-speed box with special gate change.
TRANSMISSION: Chain, with shock absorber on engine shaft.
PRICE: £125 with sidecar, £100 solo.

LAST Olympia motor cycle exhibition marked the return of the New Hudson as a big single and sidecar, and the new model has been most successful in recent trials.

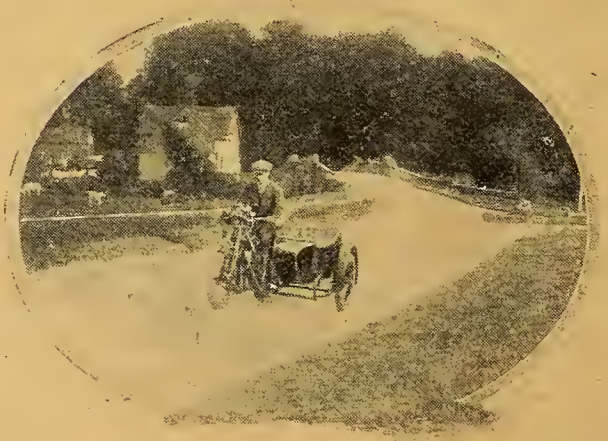
Not only did the firm produce an article up to its own high standards, but made a point of placing it on the market at a competitive price; the very complete and up-to-date specification of the 595 c.c. New Hudson, with its comfortable and luxurious sidecar, is a very marked feature for so moderately priced a machine. Included in this specification are such features as a decompressor to ensure easy starting, an excellent cush drive on the engine shaft, and sensibly proportioned internal expanding brakes in both wheels. In addition, such details as chain cases have not been scamped, and although these, of very neat aluminium castings, take the form of guards rather than full covers, the foremost protects the whole of the outer side of the primary chain. Aluminium footboards of sensible length and width, useful leg-shields, licence holder, and, in fact, every essential detail, are included. Further, the wide flat-section mudguards are thoroughly practical in every way.

Well Run-in Engine.

Bearing these many excellent qualities in mind, we took over a standard New Hudson outfit on a recent occasion for a test of its road capabilities. The machine was by no means a new one and had seen much hard service, particularly the engine, which had acquired that comfortable rather than sloppy feeling that is only obtainable in a well-worn engine of first-rate manufacture.

Throughout our test the New Hudson behaved admirably; it started with great ease, showed wonderful "slogging" capabilities; proved to have maximum speed of well over 40 miles an hour; and was able to maintain a speed of 30 to 35 miles an hour with full load, apparently indefinitely.

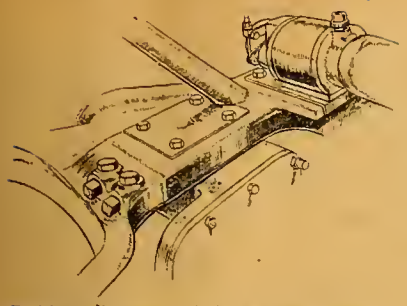
In covering our usual Midlands test route we were particularly impressed with the sound pulling capabilities of the engine with a passenger in the sidecar. Usually a second-gear climb for a single-cylinder sidecar. Frizz Hill, between Wellesbourne and Kineton, was ascended on top gear. Edge Hill, a little further on, called for middle gear on the first bend, but the summit of the hill was passed at a speed of 20 miles an hour on the Bonniksen indicator, the performance approximating to that of the average twin outfit.



Despite its large tyres and heavy build the outfit is quite pleasing to the eye.

Satisfactory Brakes.

Down Sunrising the brakes were thoroughly tested, and it was found that there was no need for such precautions as engaging a low gear, for either brake separately kept the machine under full control, and application of both together caused an instant



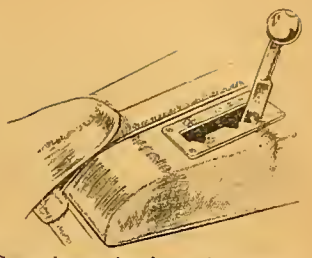
Positive adjustment of the primary chain is provided by two studs on the gear box bracket.

stop on the steepest down-grade.

Owing to the S-bend near the steepest part of Tysoe Hill, the maximum speed over the summit was a little over 15 miles on middle gear, but there were no signs of labouring under these circumstances. On the return journey Sunrising was ascended comfortably on middle gear, and even after hard driving the engine showed no signs of distress through overheating. Mechanically the unit was somewhat noisy, owing, chiefly, to the fact previously mentioned that it had much hard work before passing into our hands. As regards exhaust noise, the very large silencer now fitted below the footboard is quite efficient, and even under full throttle the engine is not unduly noisy. Tested through a normal watersplash, the mudguards, leg-shields and footboards protected the rider very well, and no special leggings were required under these circumstances. On the other hand, as is often the case, the leg-shields render the heat of the engine noticeable on the right leg, and also accentuate mechanical noises.

Convenient Gear-changing.

Gear-changing is particularly simple, for, combined with the well-known Sturmey-Archer box, is a lever projecting through a slot in the tank, and so placed that it comes very conveniently to the driver's hand.



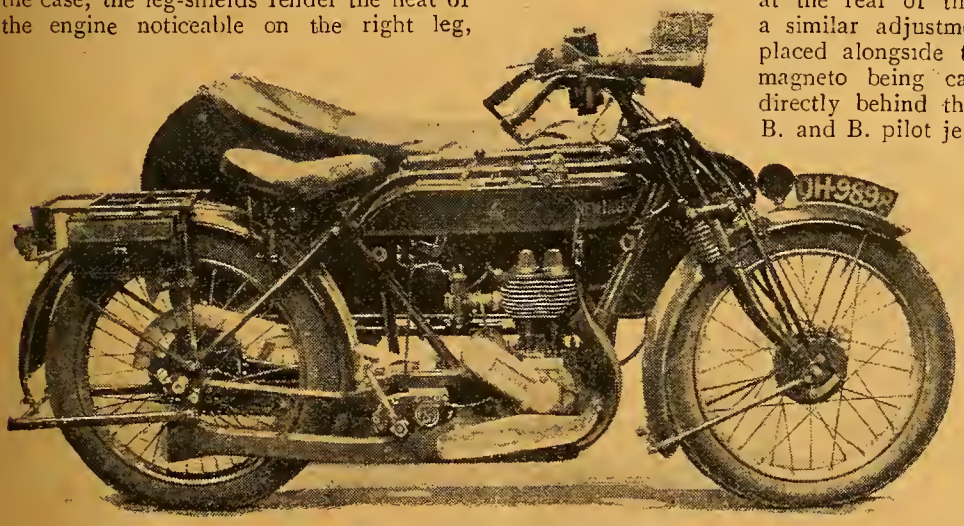
Gate change in the tank connected to the Sturmey gear box.

The Druid-type forks worked smoothly and satisfactorily, and, in combination with the 700 × 80 mm. Dunlop Magnum tyres, provided extreme comfort for the rider.

The sidecar is well sprung, well upholstered, and roomy, and possessed of a sensible locker in its bulbous back. Sidecar attachments are not always too satisfactory, but we have no grumbles with regard to those on the New Hudson outfit; they appear to be rigid and satisfactory in every way, and though the steering was slightly heavy, owing probably to the very large section tyres, this was only noticeable at very low speeds.

Detail work throughout is excellent, and, in addition to a positive adjustment of the gear box placed at the rear of the bottom bracket, there is a similar adjustment for the magneto chain placed alongside the gear box adjuster, the magneto being carried well clear of mud directly behind the cylinder. The standard B. and B. pilot jet carburetter functioned admirably throughout.

The New Hudson engine is well designed, having large valves and excellent cooling arrangements. It differs from many modern engines in employing plain bearings throughout the crank assembly. These, however, have proved fully satisfactory, and our impression of the 1922 New Hudson outfit is that it is a thoroughly satisfactory machine.



Sturdy symmetry may be said to be the keynote of the 595 c.c. New Hudson outfit.

NATIONAL CENSUS OF ROAD TRAFFIC.

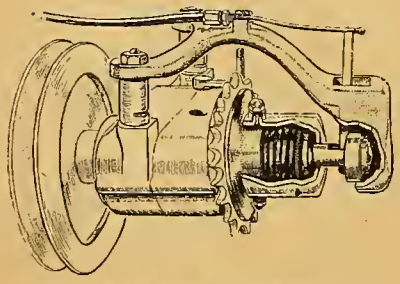
THE ultimate value of the road traffic census, just completed by the Ministry of Transport (says *The Autocar*), should be considerable. The enumerators—men specially selected for the task—made careful note of every vehicle which passed their observation posts, and when the records have been collected and analysed they should provide data most useful in helping the Roads Department of the Ministry to determine such at present debatable points as the actual gross tonnage which certain roads have to carry, the volume of traffic at specified points, the proportion of "through" to local traffic, the need for widening certain roads, the advisability of "classifying" a road on the ground that it has a heavy burden to bear, and the class of surface required on individual sections to suit the variety of vehicle most in evidence upon them. Incidentally, the census should enable the Minister of Transport to ascertain where good value is being obtained for the money spent on highway upkeep, having regard to the traffic stresses imposed.

AMONG THE ACCESSORIES

Handsome Mechanical Horn.

Ease of operation and graduation in tone are features of the Lion mechanical horn, made possible by the powerful leverage of the handle; adjustment is provided to take up wear. 37s. 6d. (The Britannic Electrical Co., Ltd., Warstock, near Birmingham.)

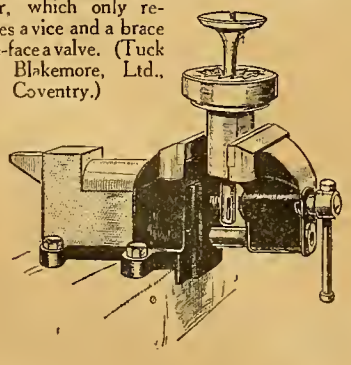
Clutches for ex-W.D. Douglases.



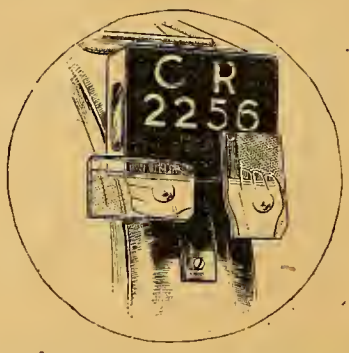
Plain two-speed ex-W.D. Douglases may be converted to clutch models by the Long cork insert clutch. (The Motor Cycle Accessories Co., 43a, New Cross Road, London, S.E.)

Valve-Facing Without a Lathe.

Motor cyclists who do not possess a lathe will be interested in the Tuckmore valve truer, which only requires a vice and a brace to re-face a valve. (Tuck and Blakemore, Ltd., Coventry.)

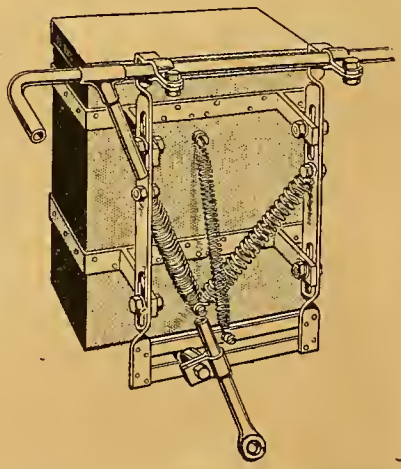


Auxiliary Traffic Signals for Motor Cycles.



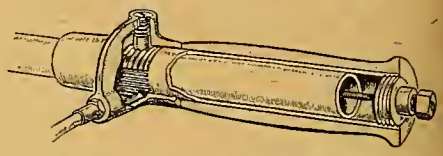
After the style of the devices occasionally seen on large cars, a hand-signalling device has been designed by S. W. Edwards, 19, Sydney Street, Shirley, Southampton, for motor cycles. Each pair of lever-operated hands—there is one in front—is transparent and therefore is illuminated at night by the existing lamps.

Spring Suspended Luggage Case.



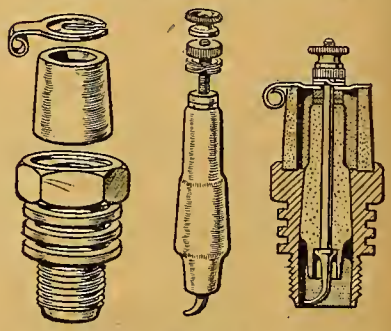
Suspended on coil springs from an auxiliary frame work attached to the carrier proper where the tool bags usually are fitted, the Playfoot spring luggage case solves the problem of carrying fragile items awheel. If two cases are used it is easy to connect them across and form a third platform, say, for a pillion seat. (R. Playfoot, 31a, Portswood Road, Southampton.)

Ingenious Twist Grips.



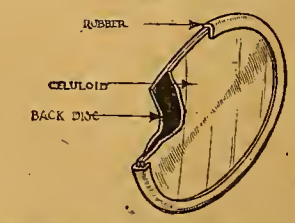
Operating two controls simultaneously and independently, Alexander's twist grip uses a rack and pinion for the throttle and a straight outward pull for the air. The spring behind the plunger in the thumb stop is just sufficiently strong to locate the air control. Straight pulls on both wires and positive adjustment are other advantages of the device. (E. C. Alexander, The Elms, Upton.)

Simple Detachable Plug.



In the Collins plug design, the central electrode and main insulator are a taper fit in the plug body, cylinder pressure and a capped tube of some suitable non-conducting material holding the assembly together. (Capt. S. L. Collins, Fairholme, Sunbury Common, Middlesex.)

Weather-proofing the Licence Card.



Cheap licence holders are seldom thoroughly waterproof; to overcome this the "Weather-proof" protector has been designed. It seals the card inside the ordinary holder. (S. J. Addison, 74, Derby Road, Northampton.)

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

40,000 MILES WITHOUT DECARBONISATION.

Sir,—My Triumph still does 40 m.p.h., with sidecar, ticks over like a clock, and starts after two kicks without priming, and has been running five years without ever being decarbonised either by cylinder removal or any patent process. (Approx. mileage, 40,000.)

This is in all weathers and conditions of riding, over fields and through lanes necessitating low-gear work for half an hour at a time. An exhaust valve broke a couple of years ago on the road; this I replaced with the spare carried, without grinding in, and carried on as good as ever.

The machine is open for inspection, and the people on my round of farms will verify my statements. I am not a mechanic nor a wizard. So here's to

Hambrook. TRUSTY TRIUMPH.

FUEL CONSUMPTION OF TWO-STROKES.

Sir,—In reply to "Old Bill's" query *re* the petrol consumption on my Allon two-stroke, the 132 m.p.g. is in no way exaggerated, the mileage being recorded by a Watford speedometer and a Veeder cyclometer.

My carburetter is a B. & B., but I do not know the size jet, as I have never touched it; the only alteration I have made is to take the air cap off and put a piece of gauze over the air intake. My speed is usually 20 to 25 m.p.h.

"Old Bill's" figure of 70 m.p.g. is far from satisfactory, and I think he will trace the cause to a leak in the crank case; I have found that a slight leak will reduce the mileage by as much as 20 miles. The faces of the two halves of the crank case should be absolutely clean, and each bolt tightened down evenly by a turn at a time. NOLLA SYADLLA.

Norwich.

WIRELESS FOR MOTOR CYCLISTS.

Sir,—"Senex," in a recent article in *The Motor Cycle*, bewails the fact that it is impossible for the passenger in a sidecar to talk to the driver, and he probably voices the opinion of many.

An ideal silencing system, however, may not come for some time, and till then a miniature radio set will, I think, solve the problem. A dynamo, similar to those now used for lighting purposes, would supply the current; the commonly-worn helmet would hold and hide the head-band. The machine would not need a range of more than five or six miles, and so need not be unwieldy.

Even when the ideal silencing system comes, and passenger and driver can converse freely, the radio set will have a wide sphere of usefulness. For instance, on a recent tour with a friend, on several occasions it happened that the one who had been riding ahead returned two miles or so to find that the other had been delayed by quite a minor adjustment. Eventually we got separated at a fork after dark; in circumstances such as these some means of communication would have been invaluable.

The rider in a hurry, too, when unwillingly compelled to pass a break-down on the road, would infinitely prefer the definitely spoken regrets, as possible by radio, to the unintelligible shout he is compelled to use at present.

Till the motor cycle becomes a practically silent machine there will be great scope for radio as a means of communication between passenger and driver, or two or more riders in company, which is on most machines impossible at present.

Altogether it is a fascinating subject, and I am convinced that a reliable radio set will, in the near future, be as much a standard fitting on motor cycles, or for that matter motor cars, as electric lighting will be, developing, as most things appertaining to motor cycles do, from the "extra gadget" stage to an indispensability. A.J. 2¼.

Darlington.

VANQUISHED AGAIN. Screw Hill, discovered by *The Motor Cycle* and regarded as the country's worst hill, continues to attract would-be mountaineers. G. White (976 Brough Superior sidecar) making a good climb during a recent impromptu attempt. The picture is not faked in any way

FUEL CONSUMPTION ON A BIG SINGLE.

Sir,—How Mr. A. D. Harper manages to obtain 127 miles to the gallon on his 550 c.c. Triumph I don't know, and in my opinion it is quite impossible with a Triumph carburetter. I have ridden a 550 c.c. Triumph practically as long as your correspondent, and my petrol consumption is between 60 and 70 m.p.g. In my opinion the 550 c.c. Triumph is the finest solo machine on the road, but I do not believe in attaching a sidecar to it if speed and power are required. The finest sports sidecar outfit on the road is the 678 c.c. Martinsyde.

Batley. TRIUMPH.

THE FINEST PROSPECT.

Sir,—Try these:

Edgehill and Sunrising Hill, between Banbury and Stratford.

On road from Clipston to Market Harborough, with Market Harborough just below.

Newnham Hill, near Daventry; also at the other end of the hill on road from Newnham on to London Road.

Hill on the road in a field above Priors Marston, Warwickshire.

From Winwick to Cold Ashby. (The road is on the map, but cannot be easily seen in the fields.)

Rugby. F. M.

SILENCE.

Sir,—Your leading article on "Unwarranted Activity Against Noise" is indeed very timely and welcome. The action of the police in respect to silencing cannot be too strongly condemned, and it is high time that someone made a move to counteract it. The methods some of them adopt are, to say the least, reprehensible.

For instance, a friend riding my machine, a 348 c.c. Douglas fitted with silencer, was pulled up in the following manner: After passing two policemen (in plain clothes), a third some distance away (also in plain clothes) pulled him up, suggesting that someone wished to speak to him—they did, all three of them; fined £1.

As far as silence goes the machine is inaudible at fifty yards. A. G. B.

Stone.

Sir,—I am not a believer in the straight-through pipe; neither am I a believer in the ultra-silent machine. I think that it is always noticeable when riding a fairly noisy machine that the people who apparently spend their leisure time obstructing the roadway manage to take notice of one's approach and to give one the minimum amount of room to get through.

On the other hand, on a really quiet machine the driver is reduced to a—usually—fruitless sounding of his horn, which seldom produces a better result than of obtaining the request that he will proceed to ———, his (possible) destination. Is not, therefore, a slightly noisy machine safer to ride than a really quiet one? We must always remember safety first. OBJECTOR.

Derby.

Sir,—There is rapidly-growing police activity just now in all parts of the kingdom, with the laudable object of punishing motor cyclists who are too thoughtless or too selfish to see that their machines are reasonably silent.

I am certainly no bigot, so far as motor cycles are concerned: as you know, I commanded a motor M.G. battery early in the war, am a pre-war competition rider, and hold the Aero Club's pilot's certificate. This, I think, will absolve me from being considered a cotton-wool merchant. But it is beyond a joke, and unless the undoubted nuisance ceases there will be harsh provisions inserted in the early-expected new Motor Act.

I represent the A.A. in the police courts in a Midland district, too, and as a solicitor can assure your readers that there is *no* defence if the evidence proves that a machine was noisy at the time of the offence. The Order (1904) states that the exhaust gas must first pass "through a silencer, expansion chamber, or other contrivance, suitable *and sufficient* for reducing as far as may reasonably be practicable the noise that would otherwise be caused by the exhaust gases." I enclose my card and remain,

Salop. ONE OF THE AUDIENCE.

DANGEROUS IMPROVISED BRAKES.

Sir,—May I be permitted to draw attention to a dangerous practice which is becoming very prevalent in many districts? I refer to the number of boulders and bricks which are left on the public highway after being used for the purpose of "scotching" vehicles on hills.

A question relating to this was recently asked in the House of Commons by Mr. Rhys-Davies, M.P., and, in reply, Sir John Baird, for the Home Department, promised to have inquiry made if particulars were provided.

T. LAWRY.

GOGGLES AND HEARING.

Sir,—I would very much like to know if anybody besides myself finds that one sort of "goggle-deafness" takes the form of hearing sounds from the wrong direction.

For instance, I was riding over some bad bumps a few days ago when I heard a jarring "clank-clank," apparently proceeding from the front forks. I stopped and dismounted, and in so doing discovered that the sole cause was that the stand had been jolted off its clip!

I would also like to express my sincere agreement with Mr. Danks on the subject of issuing silence-certificates with every new machine. O.K. JUNIOR.

Newcastle-on-Tyne.

DEAF MOTOR CYCLISTS.

Sir,—I notice in "Current Chat" of the 14th that a penalty inflicted on Mr. T. O. Mullings, of Shrewsbury, by the local Bench has been made doubly heavy, presumably on account of his having driven a motor cycle whilst suffering from deafness.

A very interesting question is thus raised. We may assume that this unfortunate gentleman is, at the most, only *moderately* deaf, and speaking as a moderately deaf rider may I say that such an affliction is in no way a handicap to a motor cyclist. My experience is that with the engine running I can hear overtaking traffic exceedingly well, and it is invariably the case, when my pillion passenger gives a warning shout of the approach of a faster vehicle that I have already been aware of it for some time. I can also, when coming unexpectedly upon an outsize in "pot-holes," hear quite plainly his muttered and often not very polite ejaculations.

A large proportion of railway engine drivers are somewhat deaf, chiefly in the ear constantly exposed to wind, and I have been told by such drivers that they can hear mechanical defects and outside noises remarkably well—much better than their firemen, whose hearing may be perfect.

London, E.C. ARDOFEARIN.

SPORTSMEN EVER. Surprising as it may seem, Ireland is not so distressful that she cannot boast considerable activity among her motor cycle clubs. A general view of Magilligan Strand during the recent Ulster M.C.C. meeting

PUNCTURE PREVENTIVES IN PATCHED TUBES.

Sir,—With reference to the letter headed "Satisfactory Puncture Preventive," my experience of Jackson's "Impervo" is as follows:—

Before starting on a long run recently, I put the proper quantity into the front tube on my lightweight. I did not remember that the tube had a patch on it, but in less than fifty miles the patch was loose and the tube went down. It may be quite satisfactory in a new tube, but from my experience it is not so in a patched one. I may mention that this one patch had been on the tube for over a year, and was not leaky before using the "Impervo."

C. T. WILLIAMS.

"GAS!"

Sir,—The idea to which you give publicity in "Current Chat" (page 384) is certainly splendid.

One presumes that "Norton Rider" is a humanitarian and fears the "Annoying Cyclist" risks heart failure and/or lung bursts through his furious pedalling. It certainly is annoying as one travels along on one's sports 'bus, admired by all on the Surbiton parade, and leaving behind a gentle smell akin to that of decomposing fish, that trailing in the rear should be a mere push bikist. By all means fumigate him!

But it is a pity to stop there. A sudden application of the brakes on a straight open road will sometimes take the cyclist unawares, and his resultant spill is really ludicrous and will reduce the crowding on the road by one at least.

Still, it is as an instructor in road manners that "Norton Rider" chiefly appeals to me, and I should be so glad to learn more from this gentleman. For instance, I myself find that the shouting of some suitable and abusive remark helps the dilatory pedestrian to remember, and continue to remember, that he annoys the motor cyclist; but "Norton Rider," I feel sure, will have some more cunning, subtle, humorous way of helping the motoring movement, and the movement of the pedestrian. Please let us know, "Norton Rider," that we, the chosen people, may teach the public the manners of the open road.

But oh, to own Chitty-bang-bang for one hour, that I might drive continually just in front of "Norton Rider."

A. C. GODFREY.

Sir,—Motor cyclists in general are acclaimed to be of a generous and reasonable nature, and it is beyond my comprehension why the immediate presence of a cyclist annoys them. Does it offend their dignity? It certainly is not the fear of a crash—with the odds greatly against the cyclist.

Rational minds must admit that, to keep up with an average motor cycle, it requires a cyclist of excellent stamina, and therefore experience. Such a man has, no doubt, had more than one tight corner, and is quite able to use his brains and brakes quickly and efficiently. This ability removes the alleged danger.

WATER SPLASHES FASHIONABLE. T. Meakin (Velocette) splashing through Gaddesby ford, included in a recent Leicester trial, and——

Incidentally, excluding pseudo speedmen and small boys, fast travelling does not mean "furious pedalling" any more than fast motor cycling, within reason, means furious driving.

Perhaps motorists will ask, "Why *do* cyclists tuck in?" The answer is easy. Like the motorist, the cyclist wishes to cover the distance with the minimum of exertion, and tucking in is such a help!

Motor cyclists once pushed the humble cycle, and it would be a pity if the acquisition of an engine makes a man snobbish.

Accordingly, I feel I must appeal to motorists not to deny a small help, so easily given, by "choking him off," but to foster a good inter-class feeling on the road.

JAMES R. THORPE.

[Our original correspondent's suggestion was not given our support,—in fact, we were mildly surprised that any Norton rider should have been troubled in this way—but we cannot agree that the practice of hanging-on by cyclists is not dangerous.—ED.]

——H. Greaves (Beardmore), left, and B. L. Bird (B.S.A. sidecar) providing amusement for many schoolboys by crossing a considerably deeper one discovered by the Redditch Club.

MARKING IN THE SIX DAYS TRIALS.

Sir,—May I ask for a little of your space to comment on the judges' report of the Six Days Trials? The report begins with a statement that the Trials were conducted in the manner prescribed by the regulations previously made public. A *careful* examination of the published weights shows that in several instances the regulations were not enforced; and those unfortunates who relied on the wheel-spin clause found that it was for ornament and not for use.

Stress is laid on the importance of the final examination, which makes one regret that it was such a cursory affair compared with the timekeeping, etc.; for example, a competitor unlucky enough to be 15½ min. early at a secret check forfeited his gold medal, yet in two cases known to the writer—there were probably many other similar ones—a vital part of the transmission was only made usable by straps and wire, which were removed prior to the examination, and missed by the examiner, one mark being deducted for a loose spoke, actually caused by wiring the loose sprocket to it!

The remarks as to the inclusion of "very difficult hills" are much to the point, but since climbing them is almost entirely a matter of driving skill, which is not a primary object of test in the Six Days Trials, full marks should not be deducted if a driver succeeds in getting to the top without outside assistance; *i.e.*, if he falls off, let him start again without penalty on freaks like Rosedale.

As regards the results, it appears that some manufacturers suffered unduly from the system of marking. The order of merit depended almost entirely on the bonus marks gained in the speed test, and while this is fair enough among the lightweights, which are all designed for one purpose, it discriminates most unfairly between the heavier machines. Some are expressly designed as fast solos and others as double-purpose knockabouts. For example, take two machines of similar capacity: one designed for a maximum of, say, 70 m.p.h. averages 58, getting a bonus of 16; the other, designed for a maximum of 50, averages 48, bonus 6. Which is the more meritorious performance? Obviously the second, yet the first is generally regarded as better. It is difficult to see how a fair mean can be struck, but the system of bonus marks for speed is not ideal.

One word more. I believe over fifty hills were observed during the week; it seems a great pity that the number was not greatly reduced and the observing more completely done. The very fact that so many decisions, *e.g.*, on Rosedale, were reversed is an admission of incompetent observing; again, later in the week three experienced spectators (whose names are well known to all motor cyclists) informed me that three riders had failed—by falling off or charging the bank; *not* by being baulked—on a certain observed hill, yet two of those three riders appear with +5 marks for hill-climbing. It was, in fact, clear to all competitors that the observing was very badly done, and to this I will hold against any official assurance to the contrary. J. M. PHILPOTT.

PRIVATE OWNERS IN BIG TRIALS.

Sir,—"Matchy" thinks that it would be a better guide for the public in trials like the Six Days event to restrict entries to manufacturers, as a private owner might spoil success through bad driving. Surely it is noticed very often that private owners drive far better in big trials than trade riders. Then why exclude them, especially as they enter for the sport of the event? I quite agree that expense stops more private owners from entering. XB. 1532.

London.

"COLD FEET."

Sir,—I am rather amused at "Bun-Doola's" suggestion. Might I suggest a gallon tin of 30 O.P. Scotch, strapped to the carrier, and a length of rubber tubing, from which a nip could be taken during the colder spells?

If "Bun-Doola" buys a pair of airman's hip boots, wool lined to the soles, he could trek through Siberia in winter and never have cold feet. These can be bought, ex. W.D., for a nominal sum. WAGG-J.A.P.

Glasgow.

SUGGESTIONS TO BRIGHTEN THE EXETER RUN.

Sir,—With reference to your correspondent's suggestion of including a hill-climb in the London-Exeter run by way of stiffening up the trial, with classes for machines of every known capacity, might I suggest that to add further interest to the proceedings, classes be included for sports models, super-sports models, and stripped racing models, also that the start from Staines be used as a speed test by commencing with a flying kilometre trial?

This would be useful to prove or disprove the oft made statement that machines travel faster at night, as a similar start might be made from Exeter on the return journey. Other interesting tests might also make a gold more worth while, such as a timed plug-changing on Salisbury Plain and a bun-eating competition at Honiton. QUIXIX.

Bayswater, W.2.

DEPOSITS ON VALVE STEMS.

Sir,—"Interested" complains of a rubber-like deposit on his o.h. valves; I have had the same trouble with my side-by-side valve Triumph, but only when using Castrol R oil.

Once when I mixed a few tablespoonsful of "R" with my petrol the deposit was so thick that I wonder any gas got into the cylinder at all.

At the last show at Olympia I went and saw Messrs. Wakefield, who said they had had similar complaints before, and advised me not to use Castrol R in a touring machine. I still use "R," but take the inlet valve out every 500 miles and clean off the deposit.

London, S.W. SIDEVALVE.

THE LARGEST AIR-COOLED ENGINE.

Sir,—I should like to point out that the Armstrong-Siddeley "Jaguar" does not represnt the highest powered air-cooled engine.

A static radial aircraft engine was produced after the war by the Cosmos Engineering Co., of Bristol (a firm that will be remembered in connection with the radial engined car bearing their name), with a nominal h.p. of 1,000, about which the following particulars may be of interest:—

Number of cylinders.—18 (two rows on two-throw crank).
Bore and stroke.—158.75 × 190.5 mm.
Piston speed (normal).—2,387.5ft. per min.
R.p.m. (normal).—1,750.
H.p. (nominal).—1,000.
Weight (dry).—1,400 lb.
Weight per h.p.—1.4 lb. E. A. R. LEECE.

SUMMARY OF CORRESPONDENCE.

Further communications have been received from Messrs. F. A. Simpson and Rex. Foweraker in reply to Mr. J. A. Newman's letter on the subject of "Bristol's Freak Hills." The controversy has now become a question of whether or not Burledge is a freak hill, and, since there is no hard and fast definition of what is a freak hill, we are compelled to close the correspondence.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

MAGNETO FOR FLAT TWIN.

I am building a four-stroke flat-twin engine, and have a Simms-Bosch D.A.V. type 45 degree magneto. Could I run the magneto at engine speed, removing one cam from the contact breaker and fixing a distributor on the half-time shaft without doing any harm to it. Alternatively would you advise me to run the magneto at half speed and alter the cams in the contact breaker?—W.L.W.

The 45 degree magneto is quite unsuitable for use with a four-stroke horizontal twin engine. Your best plan would be to sell the 45 degree magneto and obtain one with firing angle of 180 degrees; this should run at half engine speed.

A RARE MACHINE.

My machine is a 1919-20 499 c.c. Bianchi (single cylinder), with three-speed gear, clutch, and kick starter, Amac carburetter, and C.A.V. magneto. It is ridden solo. (1) What is the best valve setting? (2) What is the best magneto setting, for economy, with reasonable speed? I am given to understand the machine is of Italian origin, and not generally well-known in this country. The engine and gears are integral, the gears being on near side of crank case, whilst timing gears are on off side. The two valve lifter cams and half-time wheel are in one and appear to be machined out of solid. The magneto is driven from this, having a gear wheel interposed with the same number of teeth.—C.H.F.

(1) Time the valves so that the exhaust is just closing and the inlet just commencing to open as the piston passes top dead centre of the stroke. As both cams are attached to the same timing wheel, however, the setting of the inlet valve will be correct if you merely make certain that the exhaust is just closing as above stated. (2) Time the magneto so that the spark occurs on top dead centre of compression stroke with the ignition control two-thirds retarded. The Bianchi, as you have been informed, is an Italian production, and only one or two privately-owned samples have been introduced into this country.

Important Dates.

Sat., Sept. 30th.—M.C.C. Sporting Trial.

Wed., Oct. 4th, to Sun., Oct. 15.—Paris Salon.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd—Olympia Motor Cycle Show.

Thurs., Jan. 13th to Mon., Jan. 24th (1923).—The Belgian Salon.

POWER LOSS AFTER DISMANTLING.

I am riding an O.K. Villiers two-stroke machine, and since having it decarbonised I find it has not the same compression. I have done 1,200 miles before decarbonising and about 100 since, so I think I have run it in enough, and if there is to be a return of the old power, which was exceptional, I ought to find it now. I have spoken to several friends, but all they could say was it is usual with two-strokes to exhibit a falling off in power. Surely that is not right; there must be some way to fix things up again. As I am only an amateur I got a mechanic to put me right, but he says there would be no loss of power if there was a leak in the joints and that the rings are all right.—B.S.

Providing all the joints have been properly remade, and providing that the original timing of the magneto has not been disturbed, there should not be an appreciable loss of power after decarbonising the engine. It is essential, however, that the joints between the cylinder and crank case should have been carefully remade, using brown paper and seccotine as jointing material. We assume, of course, that the piston rings are correctly fitted in their grooves, and that you have not by any chance fixed the piston in the wrong way round, *i.e.*, with the deflector towards the exhaust ports, and we suppose also that you have made provision for the transfer port in the new cylinder base washer.

SEEN ON THE ROAD in the Midlands recently, this unconventional-looking vehicle is less unattractive in contour than the average two-seated sidecar. It has been built to accommodate driver and passenger in equal comfort, and is driven by a single-cylinder Blackburne engine.

GOING TO AUSTRALIA.

In December I am sailing for Brisbane, Australia. Can you give me any idea as to motor cycle conditions there? My mount is a colonial model 490 c.c. Norton, purchased in 1921. If you advise me to take the machine with me, I should be grateful for any hints re packing.—F.C.H.

Conditions for motor cycling in Australia are only good in the immediate neighbourhood of the large towns. Outside the city areas the roads are usually extremely bad. There would be no special difficulty in taking a machine with you, although it would be advisable to have it partly dismantled, taking out the wheels, forks, and handle-bars, and enclosing the whole in a strong case. Your best plan is to consult one of the shipping agencies, which would handle the whole matter without further trouble on your part.

CYCLE CAR TRANSMISSION.

I have a cycle car with dual belt drive (both rear wheels) from a cross shaft just behind the engine; the drive is very long, necessitating a 12ft. belt. I wish to shorten this, but it would mean lengthening the primary chain drive to 4 or 5ft. I am anxious to know whether a chain would work satisfactorily at this distance, or would there be too much whip? I use rubber belts; would leather link belting be less liable to slip, and is the wear on pulleys greater than with rubber? Is any belt made to drive an 8cwt. cycle car without slip in wet weather?—G.E.D.

One of the advantages of the form of transmission which you describe is the possibility of using long belt centres, thus permitting a slack belt to be used with consequent smoothness of transmission. There should be no slip whatever if the front pulleys are of reasonable size, say 7in. or 8in. diameter. A chain running at 4ft. 6in. centres would be very unsatisfactory, and the slipping of the belt at the consequent short centres would be much intensified. Speaking generally, rubber belts of 1in. or 1½in. section are practically immune from slipping if kept reasonably dry, and assuming, of course, that the pulleys are of fair size. We suggest that you retain the forward position of the countershaft and that you get as great a reduction of gear as possible on the short chain drive. You will then be able to fit larger driving pulleys.

NO COMPRESSION.

Recently I bought a 348 c.c. Douglas motor cycle (1914 model) and was surprised to find that the machine possessed very little compression, and yet it runs fairly well. Although the engine can be turned over by just rotating the flywheel with the hand, there is no appreciable loss of power on the road. How is this accounted for?—A.J.

The 1914 type 348 c.c. Douglas had a fairly low compression engine intended to run at a high speed; consequently it is not so seriously affected by poor compression as would be a slower running engine with a high compression ratio. If the power is good, there is no need to trouble about the fact that the flywheel may be turned round easily by hand.

ACCIDENT DUE TO BREAKDOWN.

On a main road, A and B approaching each other, each on his proper side, a short distance apart. A's steering gear breaks, causing a dive across the road to the right-hand side. A and B collide there, A's machine being a total wreck, B's badly damaged. Both are driving at ordinary touring speeds and neither are insured. A contends that B made no attempt to avoid collision, such as easing up or swerving from the left. B proposes suing to recover his damage, on the grounds that A was driving on the wrong side of the road and at an excessive speed. Is A liable for damage directly caused by this mechanical breakage?—J.A.P.

A driver is not liable for damage directly caused by a mechanical breakage over which he has no control. If, however, he is driving at an excessive speed at the time, then he could be held liable. From the facts stated A should resist any claim made by B, but if such claim is persisted in then he should consult a solicitor, who would be able to go more fully into the facts of the case.

FITTING A BIGGER ENGINE.

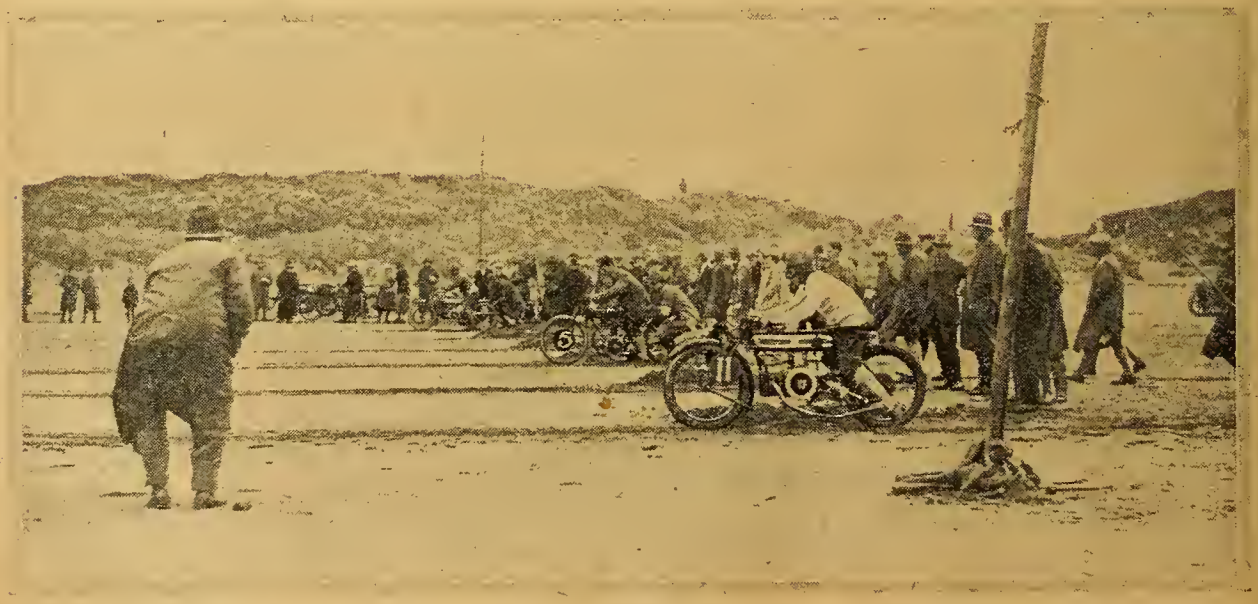
Is it safe and will it be satisfactory to substitute a higher-powered unit than that already housed in my 269 c.c. two-stroke machine? A greater turn of speed is desired, as well as better passenger carrying performances, and I contemplate obtaining, say, a 500 c.c. or 550 c.c. engine (four-stroke) and fitting it.—G.E.

It would certainly not be advisable to fit a 500 c.c. or 550 c.c. four-stroke engine in a frame built for a 269 c.c. two-stroke.

WORN BIG-END.

When travelling on full throttle (which does not amount to much on my small two-stroke!) the engine makes a fearful clatter. This does not happen until the machine exceeds a certain speed, nor does it occur when climbing a hill with throttle wide open. Altering the timing does not appear to alter this noise. What is the cause?—G.E.

In all probability the noise is the result of a worn big-end bearing, since the trouble only makes itself objectionably apparent when running light as you describe.



RACING WITHOUT TIME-KEEPERS. Race meetings on the sands become more popular week by week, and if, as was done at the Weston-super-Mare event illustrated, the classes are run as races in heats, they should continue to attract much interest.

SHOCK ABSORBING AT THE BASE.

(1) What are the advantages (if any) and disadvantages of a properly designed spring connecting rod, especially for use with a high compression single cylinder engine? (2) Would it increase efficiency? (3) Are any engines so fitted.—A.H.P.

(1) Spring connecting rods have never been used with satisfaction, indeed it seems most unlikely that such a device is worth experimenting with, although occasionally it has been suggested. (2) Possibly, if the ideal design could be attained. (3) No.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"S.H.E." (Sussex).—Carburetter suitable for Cedos, other than that made and fitted by makers.

"C.E.S." (Lincoln).—293 c.c. New Imperial; 348 c.c. Raleigh; and 349 c.c. Barr and Stroud engine: petrol consumption, reliability, and general suitability for touring.

"C.M." (Falkenham).—Harper Runabout: starting, steering, reliability.

"H.E.A." (Weymouth).—349 c.c. A.J.S.: reliability, speed, hill-climbing, fuel consumption.

"C.G.N." (Yarmouth). — McKenzie lightweight.

"R.W.A." (Bromsgrove).—Johnson's Carbon Remover; seizure of C.A.V. contact-breaker.

SIDECARS FOR POSTAL COLLECTION. After an exhaustive test, the General Post Office has placed a large order for Royal Enfield delivery vans.

SPARKLETS.

£150 Four-Wheelers.

A.V. runabouts have now been reduced in price to £150 by the makers, Ward and Avey, Ltd., 1-11, Park Road, Teddington, Middlesex.

An Amendment.

V. F. G. Fowke won a silver medal in the Sopwith Cup Trial on a Beardmore-Barr and Stroud, the machine being omitted on the official list of starters.

"EVERY COPPER HELPS" the Birmingham hospitals, and the appropriate disguise of W. H. Egginton's sidecar outfit at a gymkhana in aid of these institutions no doubt attracted valuable public attention.

The Lyons Fair.

The P.L.M. Railway, 179, Piccadilly, W.1, announces that, on the occasion of the Lyons Fair, to be held from the 1st to the 15th October next, special tickets will be issued from any station in France to Lyons, both to exhibitors and to visitors.

Good Performance after 11,000 Miles.

An outstanding performance in the recent Sopwith Cup Trials was made by C. E. Taylor, riding a Vasco two-stroke machine. In addition to winning a gold medal he was awarded the Dale Cup (for the best motor cycle performance). The achievement was all the more remarkable in view of the fact that the machine had already had eleven thousand miles' service to its credit.

Found.

A tool-roll on Porlock Hill.—Ref. No. 101.

A mackintosh on Chigwell Road. Ref. No. 103.

A Tan-Sad near Charing, Kent. Ref. No. 104.

Overall motor coat at Nottingham.—Ref. No. 105.

Motorist's clothing near Tewkesbury.—Ref. No. 107.

Lost.

6v. accumulator, near Pitsea, Essex.—Ref. No. 106.

Haversack containing Rudge spares and tools, near Littlehampton. Ref. No. 102.

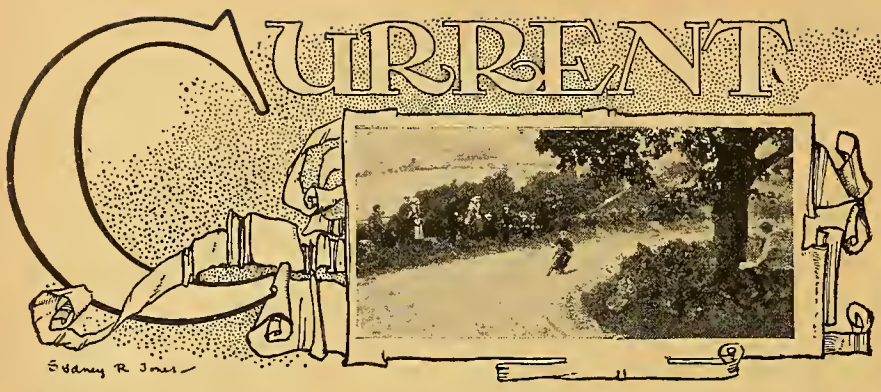
Catalogues Received.

The Tryus Cycle Co., Johnstone Street, Birchfields, Birmingham.—The Silver Prince featherweight (£26 5s.). A single gear, open frame, two-stroke, suitable for riders of both sexes.

The Burlington Motor Cycle Co., Ltd., 7, South Side, Clapham Common, London, S.W.4.—A catalogue of sidecars, describing no less than nine different models.

Desmo, Ltd., Desmo House, 264-265, Broad Street, Birmingham.—Motor cycle horns, mirrors, electric and acetylene lamps, etc.

CURRENT CHAT



No Escape!

"For allowing exhaust gases to escape from a motor cycle" in Freeman Street, Hull, two motor cyclists were fined.

Lack of Justice in Midlands Courts.

Bitter complaints continue to reach us regarding the unfairness of the police campaign against noise in the Midlands, particularly Birmingham. Apparently, the unfortunate defendants, in silencing prosecutions, are not permitted to call any evidence in their favour, however authoritative it may be.

Freak Hill Climbing Popular.

Helped almost solely by the publicity of a short paragraph in *The Motor Cycle*, the Oxford M.C. freak hill climb on Alms attracted nearly a thousand people. As announced in "Club News," a similar climb will be held at Cadsden, near the top of Kop (Princes Risborough) on October 1st.

Not Cause and Effect.

While appreciating our readers' interest in the matter, we really are tired of receiving newspaper cuttings referring to the Stratford motor cyclist who, it is alleged, has not had a bath since Armistice Day. On behalf of the whole motor cycle movement, we take this opportunity of repudiating all responsibility.

Our Erudite Police.

Summoned for the fashionable offence of the moment—noisiness—a Burton-on-Trent reader had his case dismissed after examination by the police of his silencer—an Argus. It was then explained he had nearly infringed the law in the first case by being on low gear. His machine is direct belt driven.

Touring in the 15th Century.

"With groaning wheels, the heavy machine advanced by fits and starts, now descending into rotten hollows, now sticking altogether in the deep mire, now in peril of capsizing over some uneven surface, or splashing through some low-lying part of the road flooded by a neighbouring stream." A correspondent thinks this extract from an account of the social life in England during the fifteenth century particularly applicable to present-day road conditions. We consider it more likely to be an account of the first Scott Trial.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Times to Light Lamps.

Sept.	28th	.. ..	7.16 p.m.
..	30th	.. ..	7.11 „
Oct.	2nd	.. ..	7.6 „
..	4th	.. ..	7.2 „

International Road Congress in Spain.

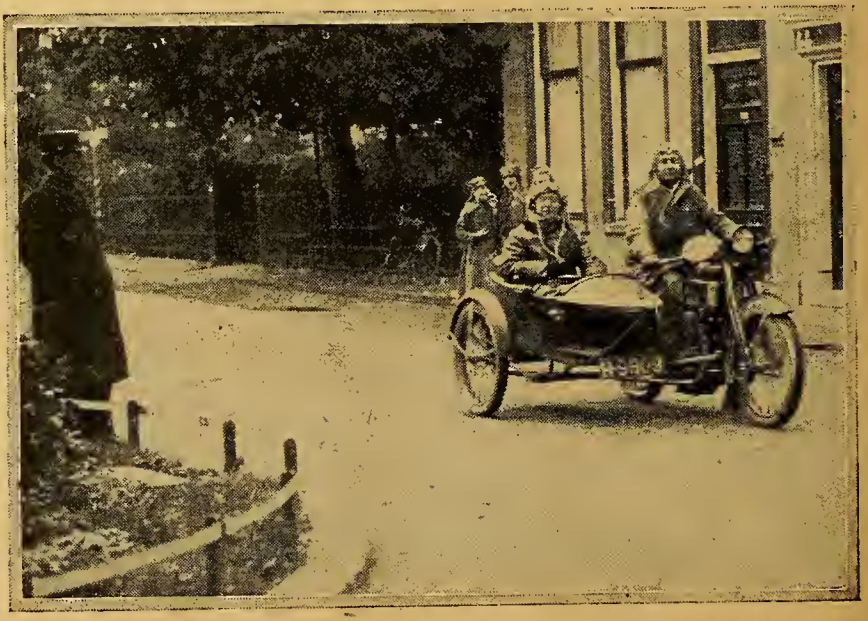
In May next year the Fourth International Road Congress will be held at Seville, by invitation of the Spanish Government. A number of British road engineers will be present. We will keep a close watch on our pet pot-hole during May.

Italians as Track Builders.

It seems that the Italians are destined to be the great track builders of the world, as, in addition to the Monza Motodrome, the Italian Sporting Club at Lima, Peru, has built a stadium and a cemented track on which motor cycle races are frequently held. Incidentally, a recent 10 kilometre race was won by a 499 c.c. Rudge-Multi, competing against high-powered twin-cylinder machines.

Coming of Age of the M.C.C.

To celebrate the founding of the Motor Cycling Club 21 years ago—to be exact, on November 19th, 1901—there will be held, as near to the date as possible this year, a week-end run to a venue which will be published in due course. Mr. W. H. Wells, Captain of the Club, is in charge of the arrangements, and any member, present or past, but especially those who helped the Club in its early days, anxious to take part should communicate with him at 366, Euston Road, London, N.W.1.



WHERE HEAVYWEIGHTS ARE POPULAR. Dutch motor cyclists favour big twin motor cycles, perhaps on account of the weighty clothing which they invariably wear! A scene in the club championship of Holland (described on page 459).

98 Entries for M.C.C. Trial.

98 entries have been received for the M.C.C. sporting trial for solo machines, which starts at Caterham on Saturday next.

A Silent Motor Cycle.

An interesting motor cycle is being produced in Coventry by Packman and Poppe, in which the main feature will be its silence. It will have a duplex frame, a Barr and Stroud engine, and both chains entirely enclosed in cast aluminium cases.

Further Price Reductions.

For 1923 the standard air-cooled Morgan cycle car, with J.A.P. or Blackburne engine, will be £135. The De Luxe and family air-cooled types will be £155 and £165 respectively. Water-cooled Grand Prix, De Luxe, and family models are £160, £165, and £170 respectively.

Pullin for Gaillon Hill Climb.

Gaillon Hill climb will take place on October 1st, the Sunday preceding the Paris Show. Already a good many entries have been received, and among them that of Cyril Pullin, who will ride a Douglas in the 750 c.c. class, in which he will be pitted against Péan, the crack Peugeot rider.

Next Saturday at Brooklands.

Saturday next will be a red-letter day for car enthusiasts who frequent Brooklands, for on that day will be held the Essex M.C. Speed Championships. Judging by the number of well-known names which appear in the programme, speed and excitement will not be lacking. A commendable innovation is the reduction of the admission fee to three shillings.

Belgian Record Attempts.

Having no equal to Brooklands, Belgian motor cycle enthusiasts are following the example of the French and have set apart October 1st for a series of record attempts, which will take place on the road from Oostmalle to Turnhout between the 28th and 29th kilometre stones. The event will be run under the F.I.C.M. and the Belgian Motor Cycle Federation rules.

New Cure for Knocking.

"Place the device on the plug of the cylinder that is knocking and keep it on for half a minute. This will 'stop' the noise, because you take away the firing compression. The device 'cures' knocking cylinders and dry pistons in the same way, and detects weak compression"—an unedited extract from a leaflet about a new spark tester. In the same way, a burst rear tyre may be cured by lifting the whole machine into the ditch, and proceeding on foot.

Paris Speed Trials Postponed.

Last Saturday morning was fixed for attempts on world's records over the flying kilometre in the Bois de Boulogne, Paris. By a special concession the Paris Municipality granted the use of the Avenue des Acacias. A thick coating of tar was laid only a few days before the event should have been held, but as it refused to dry the event has had to be postponed. Several English competitors journeyed to Paris to attack existing records.

Kop Climb Postponed.

After considerable discussion, the South Midland Centre hill-climb, to have been held on Kop Hill on Saturday, was, wisely, we think, postponed until October 7th. The surface was in an extremely rough and churned-up condition, and to get up at all was quite a feat.

Doncaster Speed Trials.

The Motor Cycle Challenge Cup will be competed for in the best supported class at the Doncaster M.C.C. speed trials next Saturday. The event, which starts a 1 p.m., will be held on the Sandall Beat Road, adjoining the Doncaster race course, and the various classes are open to members of clubs affiliated to the Yorkshire Centre of the A.C.U. H. Le Vack is the present holder of *The Motor Cycle* Cup, which is put up for yearly competition at this "Petrol St. Leger."

The Vogue of the 350 c.c. Solo Machine.

Yet another well-known firm to announce a 350 c.c. solo machine for 1923 is the Martinsyde.

Motor Cycle Beats 98 h.p. Car.

On Saturday the R.S.A.C. held a hill-climb on Cairn-o'-Mount, mainly for cars. Fastest time of the day, however, was made by J. W. Adamson (490 Norton) in 2min. 50.8sec., beating cars up to 98 h.p. Full results of the car classes are given in to-morrow's *Autocar*.

Well-known Competition Rider Disengaged.

One of the best known and most successful competition riders of to-day—and yesterday—Harry Bashall, is now disengaged. Past T.T. winner, successful in trials and on the track, Bashall is very well qualified to take charge of the competition department of any firm.

499 Knowles.

In the Judges' report on the Six Days Trials, just issued, there is given a list of machines that retired day by day. Along with a "499 Rudge," a "555 P. & M." and a "494 Douglas" is a "499 Knowles"—an unintentional, but nevertheless remarkable, tribute to the popularity of the Norton amateur rider of that name.

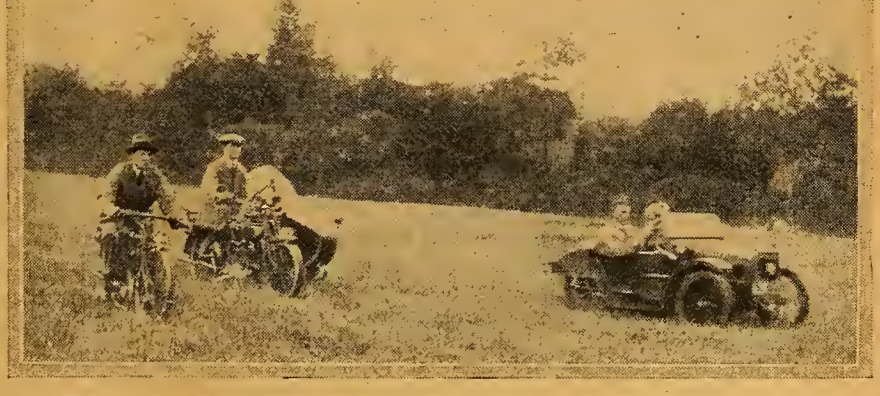
Records by Flat-twin Sidecar.

On Brooklands on Thursday last J. L. Emerson (494 Douglas sc.) was successful in gaining several records in the 600 c.c. sidecar class:—

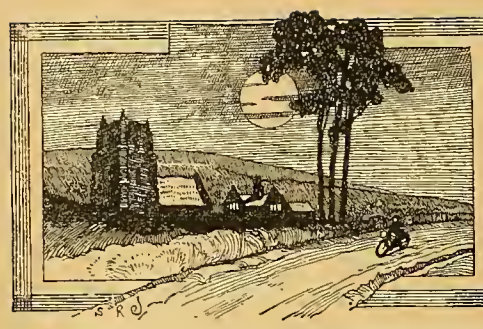
Distance.	*Time.*
50 miles ...	46m. 46.52s. (64.13 m.p.h.).
100 miles ...	1h. 37m. 30.18s. (61.53 m.p.h.)
Time.	*Distance.*
1 hour ...	63 miles, 1,586 yards (63.90 m.p.h.).
2 hours ...	120 miles, 1,297 yards (60.37 m.p.h.).

Excursions to the Paris Show.

To enable visitors to the Paris Show to travel cheaply, the S.E. and C.R. is running excursions to Paris (Nord), available for 15 days, on Friday and Saturday, October 6th and 7th. These tickets are available *via* every service except the 11 o'clock from Victoria and the midday service from Paris (Nord). Return fares: 1st, £5 5s. 3d.; 2nd, £3 15s. 3d.; 3rd (passengers travel by slower trains on the French side), £2 9s. 9d.



COMPETITORS AT THE DISABLED DRIVERS' RALLY at Blindley Heath, in the slow race. This event was won by C. Annett (749 A.J.S. sidecar), who had perfect control of his outfit although handicapped by the loss of a leg.



EIGHTY MILES OF TROUBLE.

The Scott Trial Reviewed by "The Motor Cycle" Representative, who accompanied the Competitors

HOW is it that the organisers of the Scott trial can induce over fifty motor cyclists to enter for their annual steeplechase?

True there are always a few who do not understand the troubles in store for them, yet the majority are hardened riders who have competed on previous occasions and have sufficiently recovered the use of their limbs to have another try.

As an instance of the blissful innocence with which a novice may enter, a certain Midland competitor was heard to remark that the course could not be worse than the —— trial (a Midland event which was the cause of much discussion). Yet at the finish this optimist arrived, nearly an hour late, minus several important parts of his machine, wet, muddy from several falls, but with *a broad grin on his countenance*. Realising that here was another convert to the true spirit and that his name would figure in next year's entry list I carefully refrained from saying "I told you so."

The aforementioned grin is infectious and is worn by spectators and competitors alike. It is a curious fact that in the Scott trial and in the Scott trial alone a competitor can strike a boulder in the midst of the "fairway" (?) or fall off in the midst of fourteen inches of chilly moorland stream, yet, in spite of the discomfort to man and machine, can—laugh.

A Motor Cyclists' Grand National.

This year one competitor finished with no brakes, foot rests pointing skyward, a damaged knee and breeches split for inches; he estimated his falls in the afternoon section at 30 and finished by rolling down a steep bank, yet like everyone else he had enjoyed himself and was thoroughly cheerful.

There must be some forty miles of the eighty-three mile course which would cause protests loud and prolonged if they occurred in any other event; yet not a murmur is heard amongst joyful but bedraggled survivors or disgruntled and weary unfortunates.

Secure in the knowledge that if he "has a dash" at the obstacles the sporting observer will spare him a bonus mark or so, even should he crash, the competitor will ride to win in the true sporting spirit.

Originated as a map-reading contest for members of the Scott staff and works, the trial is now the premier sporting event of the year, and by reason of the available country and the spirit of the organisers it is secure from serious competition. Underlying all is the knowledge that the proceeds are devoted to a worthy object. Would that the patients of St Dunstan's could enjoy the spectacle of all these good sportsmen cheerfully floundering through rivers or clinging like limpets to bucking and skidding machines on such a hill as the Scar. Such an outing amongst such companions would do much to cheer their plucky hearts.

Were I a manufacturer producing a new machine I would enter a team for every Scott trial with the object of finding out weak spots; but I should be sure that there were no bad sportsmen amongst my riders. And though the experiment would almost certainly be costly I should *learn*, for there is no better test of doubtful fittings. There are a few who withhold their entries because the Scott team stands the best chance. Well and good: they have missed the spirit of the trial, a first-class day's sport and companionship of the best.

The Scott trial is not a "trade" event, because the premier award carries no great weight except with the few who realise the conditions: it is not a trial in which the "win, tie or wrangle" spirit is likely to find supporters, may it never be so; but it is a supreme test of man and machine, and it includes just that element of luck and danger which is necessary to add a spice to any form of true sport.

At the conclusion any man who can average his set speed or even obtain an award may congratulate himself upon the fact that he is a real rider and has a real machine, for though many first-class men and machines may fall by the wayside no second-class article has a chance amongst the hard-riding crowd that gathers annually at Otley on a grey September morning.

Herein lies the answer to the question which starts this effusion. It is just the chance of making a passable show in such good company which attracts the sporting owner; while a few—a very few—manufacturers encourage a representative or two to compete with a view to obtaining valuable data.

Medium Weight and Power Score.

One rather curious fact has emerged, for in spite of the drifts and fearful surfaces (very much worse than any so-called Colonial trial in this country), big twins, whatever their country of origin, have not as a rule distinguished themselves. Perhaps the conditions hardly correspond to overseas surfaces, or perhaps the British machine of smaller capacity is not quite so unsuitable for overseas conditions as we are sometimes told?

It must be granted that there is no sand on the Scott course: it is probably the only form of obstacle which is omitted; but of this we may be sure, if there *was* sand in the neighbourhood it would be included—*lots of it*.

SPECTATOR.

[On pages 429 and 439 there appear illustrations of this year's Scott-Trial, which was described fully last week.—ED.]

CLOSE FINISHES AT PORTHCAWL RACES.

Overhead Valve Engines Score Heavily in Neath and District M.C. Speed Trials.

ON Saturday last very successful speed trials were held at Rest Bay, Porthcawl, by the Neath and District Motor Club. The event had originally been organised to take place in Margam Park, when the Evans-Bevan Challenge Cup at present held by C. Sgonina would have been up for competition, but owing to the unfortunate illness of Mrs. Lipscombe, the owner of the park, it was impossible to carry out the original programme.

In the fourteen events run at Porthcawl there were really magnificent finishes. Harris (248 New Imperial), who, by the way, is gradually piling up a nice record, proved an easy winner in the 250 c.c. class. H. Church (Velocette), who might have worried him, retired with plug trouble.

O.H.V. Engines Do Well.

Sgonina's self-converted o.h.v. A.J.S. was the winner of the 350 c.c. class, running clean away from the whole field.

O.h.v. engines were certainly the star performers in the 600 c.c. class, the fastest side-by-side valve machine being I. Parker's long-stroke Sunbeam.

Start of the 600 c.c. class. The sands were very wet but not dangerously soft. I. Parker (Sunbeam) and V. Anstice (Douglas) are nearest the camera.

Only three events were won by side-by-side valve engines.

Big Twin *versus* Flat Twin.

Great things were expected of Handel Davies on his Brough Superior. However, he was only able to pull off one event, and this by inches only from Anstice's Douglas, which was really in great form.

Graham Walker won both the expert sidecar classes, but with little to spare, V. Anstice's Douglas running remarkably well.

Results:

275 c.c. (GENERAL).—1, —. Harris (248 New Imperial); 2, —. Husbands (249 o.h.v. Coventry-Eagle).

350 c.c. (GENERAL).—1, C. Sgonina (349 Sgonina-A.J.S.); 2, T. A. Jones (349 Ivy); 3, —. Harris (248 New Imperial).

V. Anstice (494 Douglas) and C. Sgonina (Sgonina-Special), two competitors in the trials, who between them carried off many of the chief honours.

PRESENTATION TO T. T. RIDER.

OVER fifty members of the Coventry and Warwickshire M.C. attended the President's run to Morton-in-Marsh last Saturday, arriving by motor bicycle, sidecar, and car. Col. J. A. Cole, O.B.E., is retiring from the Presidency after two years of office, and during tea in the old Town Hall welcomed the participants in the run, recalling some interesting reminiscences of his early motoring days.

Subsequently, on behalf of the club, he made a presentation amidst enthusiasm to W. W. Brandish, jun., for his magnificent ride in the Isle of Man Tourist Trophy Races this year, when he finished second on a Triumph, averaging over 56 m.p.h.

CARNIVAL OF SPEED AT SCARBOROUGH

131 Individual Entries at Scarborough M.C. Speed Trials. Big Twin Beats the Best Singles.

SATURDAY'S speed trials at Scarborough, organised by the local club, well illustrated the farce of attempting to distinguish the relative importance of open and closed events.

The Scarborough trials were open only to members of the club, yet they attracted a greater and more talented entry than any open competition of a similar nature this year. There were 131 actual competitors; nobody tried to count the entries by the more popular method, but they must have very nearly beaten the so-called records of certain Southern clubs—and there was not much duplication.

Another illuminating feature of the meeting was the manner in which the big twin came back into its own. In the unlimited solo class there were many fast 500 c.c. machines, but only George Dance on his o.h.v. Sunbeam gained a place, and he had to be content to share a second with G. Brough (Brough-Superior), F. W. Dixon (Harley-Davidson) being first.

Each competitor was allowed two runs, his faster time counting in every class in which he had entered.

Results follow :—

250 c.c. SOLO MACHINES (AMATEURS).—1, F. Staniforth (249 Spa), 33s.; 2, L. Lancaster (249 Velocette), 37s.; 3, P. Baglee (247 Velocette), 39⅘s.

250 c.c. SOLO MACHINES (GENERAL).—1, G. Totty (249 New Imperial), 31⅘s.; 2, P. Robinson (250 Trump-Jap), 32⅕s.; 3, A. Hill (249 New Imperial), 32⅖s.

300 c.c. SOLO MACHINES (2-STROKE ONLY).—1, J. T. Jobhorn (249 Velocette), 36⅘s.; 2, L. Lancaster (249 Velocette), 37s.; 3, P. Baglee 247 Velocette), 39⅘s.

300 c.c. SOLO MACHINES (2-STROKE ONLY) (GENERAL).—1, A. B. Dodds (247 Levis), 32⅗s.; 2, L. Lancaster (249 Velocette), 37s.; 3, F. W. Dosser (249 Velocette), 37⅘s.

UP TO 350 SOLO MACHINES (AMATEURS).—1, S. Ford (349 Massey-Arran), 27s. 2, J. G. Bayne (349 Weatherell), 27⅕s.; 3, W. Walker (349 New Scale), 28s.

350 c.c. SOLO MACHINES (GENERAL).—1, G. Dance (349 Sunbeam), 25⅕s.; 2, Handley (349 O.K. Junior), 26⅖s.; 3, J. G. Bayne (349 Weatherell), 27⅕s.

560 c.c. SOLO MACHINES (AMATEURS).—1, G. Bower (490 o.h.v. Norton), 27s.; S. Ford (349 Massey-Arran), 27s.; 2, J. G. Bayne (349 Weatherell), 27⅕s., and A. Benson (499 Triumph), 27⅕s.; 4, R. Turner (494 Douglas), 27⅖s.

560 c.c. SOLO MACHINES (GENERAL).—1, G. Dance (499 Sunbeam), 22⅘s.; 2, R. T. Cawthorne (490 Norton), 23⅕s.; 3, E. Searle (500 Sheffield-Henderson), 25⅖s.

750 c.c. SOLO MACHINES (AMATEURS).—1, G. Bower (490 o.h.v. Norton), 27s.; S. Ford (349 Massey-Arran), 27s.; 2, J. G. Bayne (349 Weatherell), 27⅕s., and A. Benson (499 Triumph), 27⅕s.; 4, R. Turner (494 Douglas), 27⅖s.

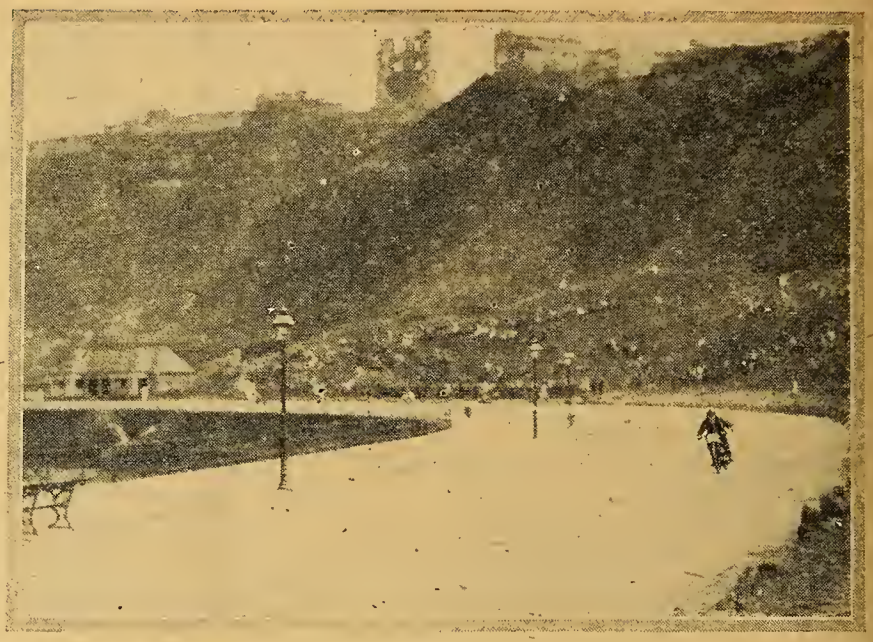
750 c.c. SOLO MACHINES (GENERAL).—1, G. Dance (499 Sunbeam), 22⅕s.; 2, R. T. Cawthorne (490 Norton), 23⅕s.; 3, E. Searle (500 Sheffield-Henderson), 25⅖s.

UNLIMITED SOLO MACHINES (AMATEURS).—1, W. H. Rhodes (998 Indian), 26s.; 2, G. Bower (490 o.h.v. Norton), 27s.; 3, J. G. Bayne (349 Weatherell), 27⅕s.

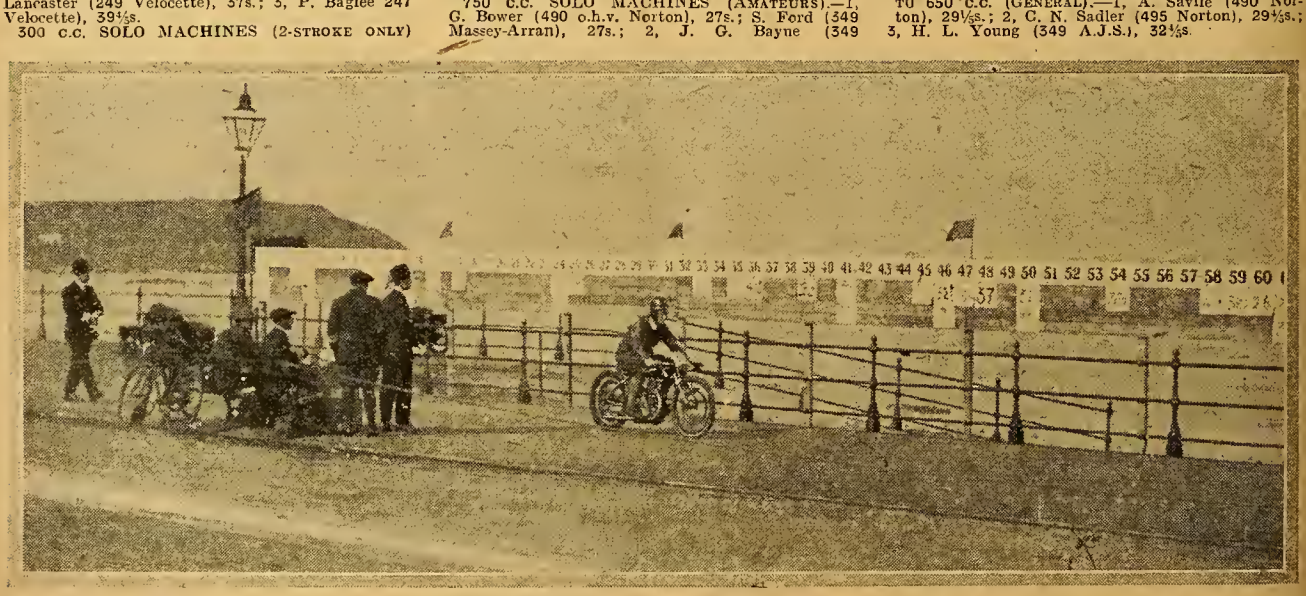
UNLIMITED SOLO MACHINES (GENERAL).—1, F. Dixon (998 Harley-Davidson), 22⅖s.; 2, G. Brough (976 Brough Superior), 22⅘s., and G. Dance (499 Sunbeam), 22⅘s.; 4, R. T. Cawthorne (490 Norton), 23⅕s.

650 c.c. STANDARD TOURING SOLO MACHINES (AMATEURS).—1, S. Ford (349 Massey-Arran), 27s.; 2, A. T. Lewis (490 Norton), 28s.; 3, T. H. Dickinson (496 Duzmo), 29s.

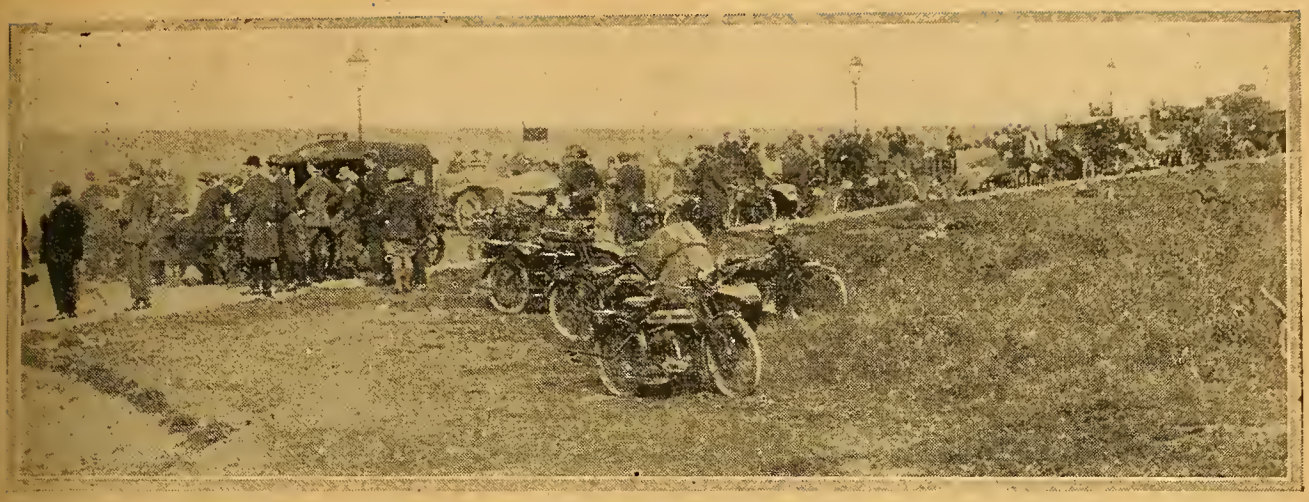
STANDARD TOURING SOLO MACHINES UP TO 650 c.c. (GENERAL).—1, A. Savile (490 Norton), 29⅕s.; 2, C. N. Sadler (495 Norton), 29⅘s.; 3, H. L. Young (349 A.J.S.), 32⅕s.



An idea of the course is conveyed by the photograph showing C. J. P. Dobson (492 Sunbeam) after rounding the bend. Spectators had a good view of the competitors from the bank below the old ruined castle.



All the competitors' times were promptly posted up as shown, and spectators in possession of a programme were able to follow the progress of the event without difficulty.



Another scene at Scarborough showing the numerous vehicles parked by visitors interested in the trials.

600 c.c. SIDECARS (AMATEURS).—1, C. Waterhouse (492 Sunbeam sc.), 33s.; 2, W. Clarke (348 Brevet sc.), 34⅗s.

600 c.c. SIDECARS (GENERAL).—1, R. T. Cawthorne (490 Norton sc.), 27⅖s.; 2, G. Dance (499 Sunbeam sc.), 27⅘s.; 3, E. Searle (500 Sheffield-Henderson sc.), 29⅗s.

750 c.c. SIDECARS (AMATEURS).—1, C. Waterhouse (492 Sunbeam sc.), 33s.; 2, W. Clarke (348 Brevet sc.), 34⅗s.; 3, W. S. Buchanan (678 Martinsyde sc.), 36⅗s.

750 c.c. SIDECARS (GENERAL).—1, R. T. Cawthorne (490 Norton sc.), 27⅖s.; 2, G. Dance (499 Sunbeam sc.), 27⅘s.; 3, E. Searle (500 Sheffield-Henderson sc.), 29⅗s.

UNLIMITED SIDECARS (AMATEURS).—1, W. S. Buchanan (678 Martinsyde sc.), 36⅗s.; 2, A. B. Smith (770 B.S.A. sc.), 39⅗s.; 3, C. F. Naylor (Harley-Davidson sc.), 39⅗s.

UNLIMITED SIDECARS (GENERAL).—1, F. Dixon (998 Harley-Davidson), 26⅖s.; 2, R. T. Cawthorne (490 Norton sc.), 27⅖s.; 3, G. Dance (499 Sunbeam sc.), 27⅘s.

1,100 c.c. CYCLE CARS (AMATEURS).—1, E. Wilkinson (1,098 Morgan), 31⅕s.; 2, C. A. Parry (1,090 Morgan-Anzani), 35s.; 3, R. E. H. Hutton (1,057 G.N.), 35⅖s.

1,100 c.c. CYCLE CARS.—1, Trubie-Moore (1,087 G.N.), 31s.; 2, E. Wilkinson (1,098 Morgan), 31⅘s.; 3, C. N. Parry (1,090 Morgan-Anzani), 35s.

INTER-TEAM TRIAL IN THE COTSWOLDS.

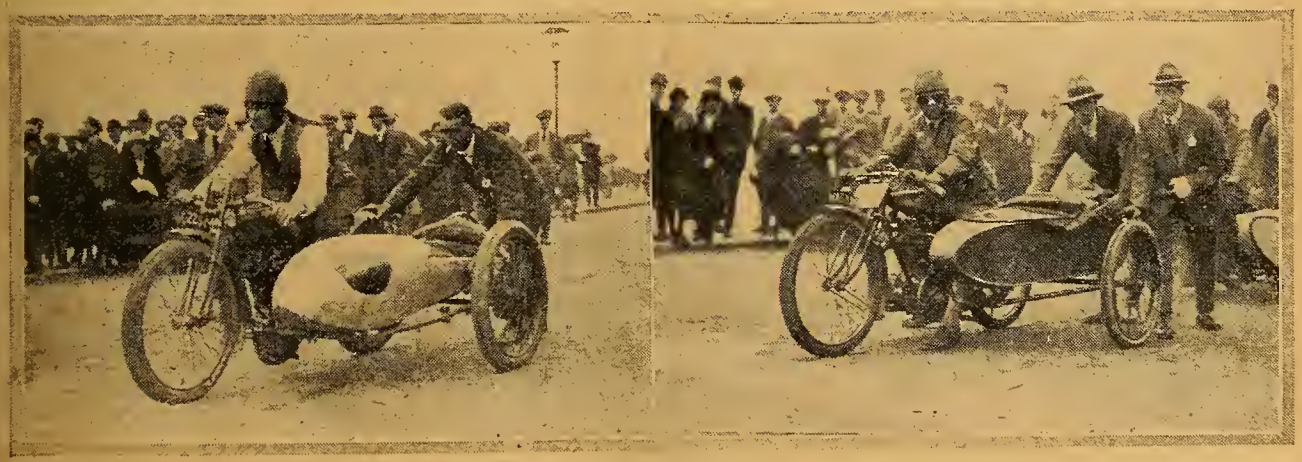
Miniature Motor Cycle Climbs Seven of the Worst Hills in the Stroud Valley.

IT was proved on Saturday, during the Western Centre Inter-team Trial, that the Stroud hills, so formidable in winter and the spring, do not unduly tax the average club man when conditions are favourable.

The annual event for the challenge cup, now held by the Stroud Club, winners of the two previous events, was the third since its inception. It was run off on Saturday last and, fortunately for the competitors, the course was dry; chains were much in evidence on the passenger vehicles and special tyres on the solo mounts; hence successful climbing depended, in the absence of wheel-slip, on power and keeping a balance.

Yet the idea that power is an absolute necessity was belied by the fact that amongst many creditable performances the outstanding ride was by Purnell, on that marvellous infant the 169 c.c. J.E.S. It was the same mount as was used in the A.C.U. Six Days Trials—an overhaul had shown no wear of importance—and with slightly lower gears it trickled steadily up seven of the worst hills in the Stroud valley, twice over, in a straight away run of 2½ hours, keeping well to time, with only one failure—on Mutton Hill, through colliding with the bank. It is difficult to over-estimate such a performance—14 difficult observed climbs in 34 miles with one accidental stop.

The circuit of 17 miles, to be covered twice, started and finished on the hill-top above Stroud; it was an orgy of vicious descents and ascents, with hardly a mile of good level road in it—Giddynap, Quarhouse, Bismore, Bussage, Mutton, Ham Hill Lane, and Mount Vernon, all well-known hills bordering on the genus "freak" when wet, but on this occasion they were dry.



SPEED TRIALS ON SCARBOROUGH PROMENADE.

E. Searle (499 Sheffield-Henderson) awaiting the starter's signal. F. W. Dixon (998 Harley-Davidson sidecar) on the starting line.

Inter-team Trial in the Cotswolds.—Of the 26 starters, 20 composed teams of four from the Gloucester, Stroud, Cheltenham, Worcester and District, and Worcestershire clubs. Twenty-two finished the course, and as far as could be ascertained from a general observation, quite a large proportion of these stand well for the premier medal awards.

On Giddynap, the first hill, there were three failures, one being, to the surprise of the onlookers, such an old hand as Reg. Brown (Sunbeam sc.); he seemed very much out of luck for, after making a star climb of Mutton Hill, a much stiffer hill than Giddynap, a broken frame tube caused his retirement on the second round; his humorous attempt to "check in" at the finish, on foot, with the casual remark that he would bring his machine along presently, caused much amusement.

Mutton Hill was considered the tit-bit of the course, and on the first circuit, as far as could be seen from one point, good clean climbs were scored by N. Smith (349 James), A. Baugham on a long, narrow four-wheel cycle car of his own make, W. Brooke, and C. Ramstedt, both on Cottons, Reg. Brown (Sunbeam sc.), and R. E. Purnell (J.E.S.), who footed, for balance only, at one or two points. J. A. Newman (494 Douglas) also footed occasionally. F. Hanman, another Douglas rider, charged the step at the bottom of the hill, and stopped dead, and found some difficulty in restarting. Early failures on the first round at this hill were C. Beavis (349 A.J.S.), and F. Morgan and K. G. Hay (Cottons).

Ham Hill Lane was reserved for solo riders only, and, although at first glance it appeared the most difficult hill, yet the fact remains that there was only one failure on the first round, and none on the second; J. A. Newman was the unlucky one, a tappet rod jumped out, when he was half up the hill, and it was some time before the fault was noticed, plugs and carburetter being suspected first; this delay very nearly put him outside the limit of 75 minutes for the circuit.

Mount Vernon was another climb for solos only, being very narrow at one point; though stiff and difficult, there was no failure on either circuit. W. B. Gibb (Douglas sc.) ran through quite successfully with the exception of a stop through a front wheel skid on Bussage. Those who finished the course were:—

C. Beavis (A.J.S.), N. Smith (James), A. Baugham (Baugham cycle car), H. S. Peters (Sunbeam), W. B. Gibb (Douglas sc.), F. Morgan, W. Brookes, J. Boakes, C. Ramstedt, and K. G. Hay (all on Cotton machines), C. A. Locke and H. Locke (Sunbeams), W. Paynter and G. Stanmore (490 Norton), J. A. Newman (494 Douglas), W. Carr (Morgan), G. Goodall (Morgan), J. Chadwick (Velocette), Rex Mundy (Ansaldo car), H. Stretton Ward (499 Triumph), Capt. A. Brittan (B.S.A. car). The four retirements were: Reg. Brown, as before mentioned, G. A. Marandez (Marseal light car), F. Hanham (494 Douglas), and W. H. Drew (Norton).

WON BY SIXTEENTHS.

Keen Riding for Fastest Time at Scottish Western Open Speed Trials.

THAT go-ahead organisation, the Scottish Western Motor Club, on Saturday last, held very successful open speed trials at Inchinan, near the old Clyde-side town of Renfrew.

The distance for all events was a half-mile of roadway of excellent surface, with ample room for a safe pull-up after the finishing line had been crossed.

Fastest time of the day was secured by J. A. Porter on 696 c.c. New Gerrard with 24⅛s. This rider also showed up well on a 348 c.c. New Gerrard in the 600 c.c. solo class, his figure being 25⅛s. Next in order of hustle towards the finishing strip were J. S. D. Price (738 Martinsyde), 26¾s., John Lloyd (492 Sunbeam), 26⅜s., R. Watson (738 Martinsyde) and J. A. Porter (348 New Gerrard), 26⅞s., R. M. Wilson (349 A.J.S.), 26⅝s. and J. B Longmuir (492 Sunbeam) with a similar figure. E. A. Small (492 Sunbeam) was the only other rider to get near the 37s. mark, this being his time in class 14. In the 249 c.c. classes A. Best (New Imperial) recorded the very creditable figure of 30½s.

The weather was almost ideal, a bright sun tempering the breeze, which had that crispness associated with the Scottish autumn. The winners in the various classes are appended. The formula used was

$$\frac{W}{C \times T^2}.$$

275 c.c. Open Solo (on formula).
1. A. Best (249 Imperial) figure of merit, 1235. 2. J. G. Porter (249 New Gerrard), figure of merit, 1126. 3. W. Kennedy (249 Imperial), figure of merit, 1080.

275 c.c. Open Solo (on time).
1. A. Best (249 Imperial), 31⅝ sec. 2. J. G. Porter (249 New Gerrard), 31⅞ sec. 3. W. Kennedy (249 Imperial), 31⅞ sec.

350 c.c. Expert Barred, Solo (on formula).
1. G. K. Ferres (349 Massey-Arran), Figure of merit, 1050. 2. J. W. Burton (349 Coventry-Eagle), Figure of Merit, 710. 3. W. T. Wilson (348 Excelsior), Figure of Merit, 590.

350 c.c. Open Solo (on formula).
1. J. A. Porter (348 New Gerrard), Figure of Merit, 1350. 2. A. Best (249 Imperial), Figure of Merit, 1250. 3. R. M. Wilson (349 A.J.S.), Figure of Merit, 1230.

350 c.c. Expert Barred, Solo (on time).
1. J. L. Lawcock (348 Sheffield-Henderson), 29⅞ sec. 2. J. W. Burton (349 Coventry-Eagle), 29⅞ sec. 3. W. T. Wilson (348 Excelsior), 29⅞ sec.

350 c.c. Open, Solo (on time).
1. R. M. Wilson (349 A.J.S.), 27⅛ sec. 2. J. A. Porter (348 New Gerrard), 27⅛ sec. 3. G. K. Ferres (348 Massey-Arran), 27⅛ sec.

600 c.c. Expert Barred, Solo (on formula).
1. J. Bonar King (490 Norton), Figure of Merit, 1170. 2. G. K. Ferres (348 Massey-Arran), Figure of Merit, 1150. 3. R. Mather (490 Norton), Figure of Merit, 985.

600 c.c. Open, Solo (on formula).
1. A. Best (249 New Imperial), Figure of Merit, 1250. 2. R. M. Wilson (349 A.J.S.), Figure of Merit, 1240. 3. J. G. Porter (249 New Gerrard), Figure of Merit, 1215.

600 c.c. Expert Barred, Solo (on time).
1. A. Smith (398 A.B.C.), 27⅞ sec. 2. R. M. Wishart (490 Norton), 27⅞ sec. 3. J. Bonar King (490 Norton), 27⅞ sec.

600 c.c. Open, Solo (on time).
1. J. A. Porter (348 New Gerrard), 26⅛ sec. 2. J. B. Longmuir (492 Sunbeam), 26⅛ sec. 3. L. B. C. Cunningham (499 Sunbeam), 26⅛ sec; R. M. Wilson (492 Sunbeam), 26⅛ sec.

Unlimited, Expert Barred, Solo (on formula).
1. G. K. Ferres (348 Massey-Arran), Figure of Merit, 1190. 2. J. Bonar-King (490 Norton), Figure of Merit, 1120. 3. J. D. Barbour (494 Douglas), Figure of Merit, 890.

Unlimited, Open, Solo (on formula).
1. J. A. Porter (348 New Gerrard), Figure of Merit, 1360. 2. R. M. Wilson (349 A.J.S.), Figure of Merit, 1250. 3. A. Best (249 Imperial), Figure of Merit, 1230.

Unlimited, Expert Barred, Solo (on time).
1. J. Lloyd (492 Sunbeam), 26⅛ sec. 2. J. Bonar King (490 Norton), 27⅛ sec. 3. R. M. Wishart (490 Norton), 28⅞ sec.

Unlimited, Open, Solo (on time).
1. J. A. Porter (696 New Gerrard), 24⅛ sec. 2. J. S. D. Price (738 Martinsyde), 26¾ sec. 3. R. Watson (738 Martinsyde), 27⅞ sec.

Unlimited, Open Sidecar (on formula).
1. R. M. Wilson (349 A.J.S. sc.), Figure of Merit, 1370. 2. G. A. Small (492 Sunbeam sc.), Figure of Merit, 1290. 3. R. Watson (738 Martinsyde sc.) Figure of Merit, 887.

Unlimited Open Sidecars (on time).
1. R. Watson (738 Martinsyde sc.), 31⅛ sec. 2. E. A. Small (492 Sunbeam sc.), 32⅛ sec. 3. R. M. Wilson (349 A.J.S. sc.), 33⅝ sec.

The foregoing results are provisional.

DEATH OF MR. ALEC ROSS.

NUMEROUS readers will learn of the death of Mr. Alec Ross with sincere regret. His end was tragically sudden. Last Saturday week he attended the dinner at the Midland Hotel, Birmingham, to welcome Mr. George Stevens on his return from his overseas visit and occupied the chair. The following Tuesday he was taken ill with pneumonia and passed away at nine o'clock on Friday evening last.

Mr. Alec Ross was an old cyclist, and, like many who were enthusiasts of pedal-cycling, he never became a really active motor cyclist, but his love of sport made him a keen follower of the pastime, and nothing gave him greater pleasure than to officiate at a motor cycle event.

THE LATE MR. ALEC ROSS.

Since in business he occupied the post of Midland representative to Messrs. Bowden Wire, Ltd., he was better known in those districts than near London, but he nevertheless was a frequent visitor to B.M.C.R.C. race meetings at Brooklands, and at other important metropolitan functions. The parent body of the sport and industry was his especial care, and he undoubtedly did good missionary work among provincial clubs, in inspiring them with loyalty to the Auto-Cycle Union and keeping them in close co-operation with headquarters.

We extend our heartfelt sympathy to his widow in her loss.

72·4 M.P.H. ON GRADIENT OF 1 IN 7.

Amazing Speeds at Basingstoke M.C. Hill Climb.

EXCELLENT weather favoured the Basingstoke M.C. hill-climb, held at Farleigh Hill on Thursday. The speeds recorded were extremely good, taking into consideration the fact that the hill has a gradient of 1 in 7 at its steepest point, and in addition curves considerably. Fastest time of the day by a club member was made by B. Fleming (492 Sunbeam), who covered the course in 25⅘s., equal to a speed of 66.66 m.p.h. Fastest time in the open events was made by H. Hands (496 Norton), whose speed was 72.4 m.p.h. Results:

Fastest Time at Sutton Coldfield and N. Birmingham hill-climb made by 733 c.c. Douglas.

THE Sutton Coldfield and N. Birmingham A.C. hill-climb at Angel Bank on Saturday attracted 45 entrants and about fifteen hundred spectators.

The success of the event was very much due to the fact that no time was wasted.

Each entrant was allowed only two runs up the hill, his better time counting throughout. This certainly saved a great deal of monotonous running up and down, which is generally the drawback at a hill-climb.

Angel Bank is situated near Cleobury Mortimer, is a few yards under the half-mile, and has a reputed gradient of 1 in 10.

Telephone timing was used, and *The Motor Cycle* formula: $\frac{C \times T^2}{W}$.

The usual band of expert riders was present, and some excellent performances were witnessed.

The c.c. solo classes attracted the majority of entrants, and accounted for some high speeds, F. T. Hatton on his 733 c.c. Colmore-Douglas making the fastest time of the day, 25 3-5sec. The Brough Superior ridden by E. Arthur also did well, recording the fastest time of the day in the novices' class.

RESULTS.

SIDECARS UP TO 350 C.C.
1. G. S. Boston (349 A.J.S.), 36s.

MILLIONS TO BE SPENT ON ROAD IMPROVEMENTS.

TO give work to the unemployed the Ministry of Transport is sanctioning many important schemes in road improvement and road construction, which will not only directly help the unemployed in the areas concerned, but will indirectly stimulate industry in quarries and steel works.

The Ministry of Transport has under consideration works involving the expenditure of seven million pounds, including such work as ring, bye-pass or approach roads at Sunderland, West Hartlepool, Newport, Leeds, Stanford-le-Hope, Portsmouth, Dundee, etc.; new roads between Newcastle and Tynemouth, Headingley and Moortown, Middlesbrough and Redcar, etc.; widening of important roads, e.g., Cowbridge Road, Cardiff; Penzance to Land's End; Chester to Birkenhead; Beverley Road, Hull; Barrow to Ulverstone; Cardiff Road, Merthyr Tydfil; Greenford Road, Middlesex; Tavistock Road, Plymouth, etc.

CLUB NEWS

At the start of the recent trial of the Connaught Motor Cycle Club (Birmingham).

Cumberland County M.C.C.

A programme of highly interesting lectures has been prepared for the winter season. Among those who will lecture are Mr. Campbell McGregor, Mr. T. W. Loughborough, Mr. J. N. Longfield, Mr. J. E. Greenwood, and Professor A. M. Low. In addition, *The Motor Cycle* film has been provisionally booked by the club. The various lectures and concerts will be held in the Crown and Mitre Hotel, Carlisle, at 8 p.m. on the following dates: October 20th, November 3rd, 10th, 17th, and 24th, December 8th, 15th, and 29th, January 5th, 12th, 19th, and 26th, February 2nd, 9th, and 16th.

Slough and District M.C. and L.C.C.

Alms Hill, Heuley, was the scene of a hill-climb held on the 9th inst. Some very good times were recorded for the 500 yards course. Results:—

350 c.c.

1. H. S. Tweedy (348 Watney-Blackburne), 32⅘s.
2. E. A. Cullum (348 Douglas), 48⅘s.

500 c.c.

1. H. Glover (490 Norton), 32s.
2. H. S. Tweedy (348 Watney-Blackburne), 32⅘s.
3. J. E. Hathaway (398 A.B.C.), 35⅖s.

750 c.c.

1. H. Glover (490 Norton), 30⅕s.
2. M. J. Anderson-Coates (490 Norton), 33⅖s.
3. J. E. Hathaway (398 A.B.C.), 37s.

1,000 c.c

1. E. Finch (348 Watney-Blackburne), 28⅗s.

UNLIMITED.

1. E. Finch (348 Watney-Blackburne), 28⅗s.
2. M. J. Anderson-Coates (490 Norton), 30⅖s.
3. H. Glover (490 Norton), 31s.

Surrey M.C. and L.C.C.

Results in the motor cycle classes of the members' speed trial, held on the 16th inst., subject to confirmation by the committee, are as follows:

350 c.c.—1, L. F. Peaty (350 Hawker), 21.98s.; 2, T. G. Meeten (346 Francis-Barnett), 25.73s.; 3, H. C. Mansell (349 A.J.S.), 28.58s.

550 c.c.—1, P. M. Walters (496 Duzmo), 22.77s.; 2, L. F. Peaty (548 Hawker), 22.55s.; 3, W. H. Sheraton (490 Norton), 23.90s.

1,500 c.c.—1, L. F. Peaty (350 Hawker), 22.48s.; 2, T. G. Meeten (346 Francis-Barnett), 24.76s.; 3, P. M. Walters (496 Duzmo), 22.50s.

UNLIMITED.—1, P. W. S. Bulman (976 Zenith), 23.50s.; 2, A. W. Goswell (698 Raleigh), 25.99s.; 3, T. G. Meeten (596 Indian), 26.66s.

THREE-WHEELERS.—1, P. W. S. Bulman (976 Zenith sc.), 28.73s.; 2, L. C. Willson (976 Morgan), 34.25s.; 3, F. R. Seymour Hunt (678 Martinsyde sc.), 38.20s.

VETERAN MACHINES.—1, W. J. Collis (499 Rudge), 25s.; 2, S. Manners-Smith (500 Triumph), 27.08s.; 3, M. H. Medcalf (Bugatti), 26.85s.

AWARDS ON TIME IN 1,500 c.c. CLASS.—1, L. F. Peaty (350 Hawker); 2, P. M. Walters (496 Duzmo).

FASTEST TIME OF DAY.—L. F. Peaty (350 Hawker), 21.98s.

Worcester and District M.C.C.

Angel Bank is the location of the third annual hill climb, to be held on Saturday. Motor cycles, sidecars, and cars are eligible to compete, and a number of handsome awards are offered.

Week-End Club Events.

Sept. 28th.—Northampton M.C.C.—Hill Climb at East Haddon.
Sept. 30th.—Plymouth and District M.C., and L.C.C.—Dartmoor Trial
Sept. 30th.—Southport M.C.—Race Meeting.
Sept. 30th.—Atherton and District M.C.C.—Run to Holmes Chapel.
Sept. 30th.—Levis Athletic Club. Single-gear Trial.
Sept. 30th.—Worcester and District M.C. and M.C.C.—Hill Climb.
Sept. 30th.—Liverpool M.C.—Reliability Trial.
Sept. 30th.—Coatbridge, Airdrie and District M.C.G.C.—Social Run.

Oct. 1st.—Barrow and District M.C.C.—Reliability Trial.
Oct. 1st.—Halifax and District M.C. and L.C.C.—President's Run.
Oct. 1st.—Woolwich and District M.C.C.—Run to Knockholt.
Oct. 1st.—Coventry Triangle Club. Run to Moreton-in-the-Marsh.
Oct. 1st.—Leeds Motor Union.—Run to Brimham Rocks.
Oct. 1st.—Sheffield M.C.C.—Run to Peak Forest.
Oct. 1st.—Matlock and West Derbyshire M. and M.C.C.—Paperchase.
Oct. 5th.—Bulwell M.C.—Speed-judging Competition.

Chester and District M.C. & L.C.C.

Unavoidably postponed from the 28th of August, the club's hill climb at Penn-y-Ball, Holywell, North Wales, will now be held on the 7th of October. The entry list is open to members of the Cheshire Centre, A.C.U., and entries should be sent to Mr. H. Hill, Hill's Garage, The Newgate, Chester.

Stourbridge and District M.C.C.

Competitors in the club's annual sporting half-day trial for the Wallace Cup, to take place on the 7th prox., will cover the usual circuitous course, embracing Hagley Wood, New Walton, Shut Mill, and Beacon Hills. Entries close on Thursday, October 5th. Forms and particulars are obtainable from the hon. secretary, 111, High Street, Stourbridge.

North Derbyshire M.C.C.

No freak hills or secret checks will be included in the club's reliability trial to be held on October 1st, over a course of about 52 miles. Two valuable trophies, the Haslam Trophy and the Cavendish Cup, are offered for the best performance recorded by an amateur and trade rider respectively. Particulars and entry forms are obtainable from the trials secretary, Mr. R. B. Green, 1, Holywell Street, Chesterfield.

Ipswich and District M.C.C.

Owing to a heavy downpour which commenced soon after the lunch stop, making parts of the route well-nigh impassable, only four non-stop runs were claimed among the seventeen finishers in the club's 200 miles trial for the Beardmore Cup, held on the 10th inst. Results:

350 c.c.

1. H. Green (350 Beardmore-Precision), lost 22 marks.
2. B. C. Woodward (350 Diamond), lost 26 marks.
3. W. J. Coe (249 Velocette), lost 47 marks.

500 c.c.

1. A. V. Adams (496 Martinsyde), lost 13 marks.
2. B. A. Hatcher (499 Triumph), lost 18 marks.
3. C. E. Claxton (490 Norton), lost 42 marks.

600 c.c. (Winner of Challenge Cup and First Prize in Class).

1. C. O. Rose (598 Beardmore-Precision), lost 10 marks.
2. R. Thurlow (550 Triumph), lost 26 marks.

600 c.c. SIDECARS.

1. Mrs. Keer (550 Triumph sc.), lost 18 marks.
2. J. F. Rose (598 Beardmore-Precision sc.), lost 30 marks.

UNLIMITED SIDECARS.

1. F. K. Portway (633 Norton sc.), lost 17 marks.
2. H. O. Goldsmith (692 Brough sc.), lost 21 marks.
3. A. H. G. Howe (678 Martinsyde sc.), lost 27 marks.

TEAM CLASSES.

1. No. 2 Beardmore-Precision Team, total marks lost, 62
2. No. 1 Egerton's Team, total marks lost, 72.
3. No. 2 Egerton's Team, total marks lost, 85.

Clitheroe and District M.C.C.

In spite of unfavourable weather, there was a very fair attendance at the annual supper run held on the 13th inst. Supper was partaken of at Cam Ark, where an excellent evening's entertainment was provided.

Essex County and Southend-on-Sea M.C.

Members of the club spent an enjoyable afternoon's sport at the gymkhana held at Solbys, Hadleigh, while spectators watched with interest the large number of amusing events which featured in the programme.

Warrington M.C.

A reliability trial was held on the 9th inst. The route included the formidable Holsby Hill, which caused a number of failures, especially among the passenger machines. Results:—
Solo: G. Thomasson (398 A.B.C.).
Sidecar: H. Leach (976 Brough Superior).

Millhill and District M.C.C.

After the inaugural run to Essenden, Herts, where lunch was taken, members participated in an impromptu hill-climb. Competitors were timed over a half-mile course, being allowed a flying start of fifteen yards. Results:

SOLO.
1. G. A. Jeapes (348 Omega), 49s.
2. E. Barnes (293 Calthorpe), 61s.
3. A. Abel (Kingsbury), 64s.
4. E. L. Forge (293 New Imperial), 72s.

SIDECARS.
1. J. H. Woods (976 Royal Enfield sc.), 54s.
2. R. K. Gibson (976 Royal Enfield sc.), 60s.
3. A. Borkett (799 A.J.S. sc.), 65s.

Fastest sidecar and fastest solo: G. A. Jeapes (348 Omega).
Fastest time of day: G. A. Jeapes (348 Omega).

South-West London M.C.C.

A most successful social evening was held at the club headquarters, the Brockwell Park Hotel, Herne Hill, on the 14th inst. It is hoped to hold these socials monthly throughout the winter.

Alnwick and District M.C.

In splendid weather the annual speed trials were held on the 10th inst. on the sands at Newton-by-the-Sea. Competitors were timed over a flying half-mile, when the following results were recorded:

250 c.c.
1. J. Jeynson (346 Francis-Barnett), 32⅕s
2. G. Watson (249 Velocette), 35⅖s.

350 c.c.
1. Davison Hall (348 New Scale), 25s.
2. J. P. Bell (349 Massey-Arran), 26⅗s.

500 c.c.
1. J. Guthrie (490 Norton), 24⅘s.
2. Davison Hall (348 New Scale), 25⅖s.

750 c.c.
1. J. Guthrie (490 Norton), 24s.
2. Davison Hall (348 New Scale), 25s.
3. A. Reid (348 H.B.), 25⅗s.

UNLIMITED.
1. J. Illingworth (998 Trump-Anzani), 22⅗s.
2. J. Guthrie (490 Norton), 25s.
3. A. Reid (348 H.B.), 25s.

500 c.c. SIDECARS.
1. Davison Hall (348 New Scale sc.), 32⅘s.
2. A. Elliott (490 Norton sc.), 36⅕s.
3. J. P. Bell (349 Massey-Arran sc.), 36⅘s.

UNLIMITED SIDECARS.
1. Davison Hall (348 New Scale sc.), 32⅘s.
2. J. P. Bell (349 Massey-Arran sc.), 34⅗s.
3. A. Elliott (490 Norton sc.), 38⅘s.

FIVE-MILE SPRINT.
1. J. Guthrie (490 Norton).
2. W. B. Richardson (500 N.U.T.).

Fastest time of day: J. Illingworth (998 Trump-Anzani), 22⅗s.

Barrow and District M.C.

The results of the trial for the Firth challenge cup, held on the 10th inst., are as follows:—
(1) J. C. Dearden (349 Massey-Arran), (2) H. Helme (499 Rover sc.) and W. A. Singleton (678 Martinsyde sc.), (3) W. D. Mackenzie (499 Rover).

Oxford M.C.

Nearly one thousand people were drawn to Alms Hill, Henley, to witness or take part in the informal climb staged thereon by the club. As this event seemed generally appreciated, another climb has been arranged to take place on the 1st prox. at Cadsden Hill, near Princes Risborough, to which all enthusiasts are cordially invited. Car drivers, however, are not recommended to attempt the climb.

Cannock, Hednesford and District M.C.C.

Incessant rain and poor visibility greatly handicapped competitors in the recent inter-team trial, and made the ascents of such well-known Derbyshire hills as Solomon's Hollow, Axe Edge, and Cat and Fiddle doubly difficult. Two clubs, viz., the Cannock and Walsall clubs, competed. The former won the shield by obtaining six places in the first nine. Results:
1. H. Hough (976 Royal Ruby sc.), Walsall, lost 2 marks.
2. A. Spencer (557 B.S.A. sc.), Cannock, lost 6 marks.
3. B. Pedley (986 T.B.), Walsall, lost 20 marks.
4. D. Rudge (370 Connaught sc.), Cannock, lost 55 marks.
5. E. Harvey (976 Matchless sc.), Cannock, lost 55 marks.
6. M. Bailey (349 A.J.S.), Cannock, lost 89 marks.
7. J. Stone (498 Ariel sc.), Cannock, lost 130 marks.
8. T. Stena (499 Dunelt sc.), Cannock, lost 154 marks.
9. J. Paige (499 Sunbeam), Walsall, lost 164 marks.

CLUB CHAMPIONSHIP TRIAL IN HOLLAND.

Two-Day Event in the Rain. 66 Competitors. 6 Clubs Represented.

THERE are no keener motor cyclists than those of Holland. British riders have had ample evidence of this during past Anglo-Dutch trials—an event that everyone regrets was not held this year. The geographical characteristics of Holland, however, do not permit of events which include hill climbing such as forms a feature of trials held in this country, but what the tests lack in this direction they make up for in secret checks.

On the 16th and 17th of the current month the club championship of the K.N.M.V was decided by means of a two-day trial in which sixty-six competitors, representing six clubs, were entered.

Amid typical Dutch scenery. Competitors on the banks of one of the many canals in Drenthe.

The champion proved to be J. A. F. Bolland (Harley-Davidson), who lost three points and won the silver cup, offered by the K.N.M.V. The second silver cup for amateurs was won by C. W. de Rochefort (B.S.A.), whose loss was four points only, a gold medal being won by D. Hoogeveen (Harley-Davidson) with a loss of four points. Seven riders lost five points each, and five six points each.

The Club Championship was won by the Motorclub "Arnhem en Omstreken" (19 points loss), and the trade team prize by the Harley-Davidson team (37 points loss).

All competitors completed the course on the first day, but on the second day five riders gave up.

Strict Time Schedule.

The first day's route traversed the finest parts of Overysel, Drente and Friesland; 162 miles had to be covered with an average of 19 m.p.h. The start was at 7.30 a.m. and the finish at 6 p.m. No time allowance was given at the checks or at the secret checks, of which five were included.

On the second day the route was through Gelderland, Utrecht and South Holland, and the finish was at The Hague, where, at an official dinner, the results were announced.

Both days were very rainy, necessitating careful riding on the part of the soloists.

Though competitors and all other riders had a very interesting time, it is believed in Holland that trials of this character will not be held again, owing to the fact that the test was practically a reliability trial for the watches.

JUDGES' REPORT ON THE SIX DAYS TRIALS.

Improvements in Motor Cycle Design, but Several Details Requiring Further Attention.

UNUSUALLY soon after the Six Days Trials the judge's report of that event has now been issued; it is commendably brief—perhaps a case of cause and effect.

In effect they repeat what *The Motor Cycle* has already said in its report and analysis of the Trials. Extracts of the A.C.U. document (which is priced at 1s.) follow:—

"The course was in general decidedly severe, and provided a test fairly representing some thousands of miles ordinary use in the hands of a driver who has no special facilities for upkeep. The 1922 course was particularly interesting in that it included portions of routes used in previous Trials, and it was therefore possible to note the improvements made in motor cycles.

"On the whole the weather was favourable. Rain fell during two or three of the runs, and wet roads were encountered on several others. The conditions were sufficiently severe to test mudguarding, etc., but not bad enough to make the test hills unduly difficult.

"With the possible exception of Rosedale, no very exceptional hills were encountered. The ease with which most machines climbed Alms Hill, of which a short portion has a gradient of approximately 1 in 3, demonstrates that under good surface conditions the modern machine is capable of ascending any hill likely to be encountered, no matter what the gradient may be.

"The smaller classes were very satisfactory in this respect, but on long inclines such as Bwlch-y-groes, there appeared to be a tendency in some of the larger capacity engines to overheat. A great improvement has, however, taken place in this respect during the last few years.

"Very difficult hills should not be ruled out of trials, as they serve a useful purpose in demonstrating the strength of cycle parts, such as frames, rims, spokes, and wheel bearings, and they ensure that cooling and clutch surfaces are adequate. Without some strenuous tests of this kind, it is hardly possible to load the machines in an equivalent manner to that which they will experience in the hands of the public.

"The ease with which the three wheelers surmounted bad surfaced hills suggests that they benefit by the directness of driving thrust.

"There was, fortunately, enough bad weather to indicate that many machines should be better guarded. In view of the fact that they are usually travelling fast, protection from dirt carried by wind currents is of great importance in securing cleanliness for rider and machine. Oily dirt is very objectionable and ranks worse than road dirt, which is easily washed away, provided that water-excluding bearings are fitted or that proper shielding of transmission is adopted. The Sunbeam, A.J.S., Matchless, and Dunelt machines were excellent in this respect. The discharge of oil from the transmission or exhaust on to tyres was rather too common and is particularly objectionable. Actual mudguards show improvement.

"Particular attention is drawn to the fact that it is primarily the very inexpensive lightweight to which we must look to popularise motor cycling, and it is therefore very important that the small machines should be adequately mudguarded, well silenced and clean. The crude means adopted for lubrication of the transmission in many machines prevents them from being even reasonably clean.

"In some of the lighter machines where it is impracticable to carry the engine in a relatively heavy cradle, a great deal of engine vibration takes place. Much more attention should be given to the balancing of lightweight engines in some of the cheaper machines.

"Valve breakages were too frequent; the ordinary rider regards such a failure as quite a serious breakdown. Valve guides and springs should be enclosed, as is done on several engines, when in consequence they can be slightly lubricated. Overhead valve gears should never be left exposed. It is regrettable that the lubrication of such parts should be left to the smearing on of lumps of grease or constant applications of the oil can. It is difficult to keep the lubricant in its place owing to the comparatively high temperature at which the parts have to work.

"Two-stroke performances were very excellent.

"A very notable improvement has taken place in general silence, but there is still room for an all-round reduction of noise. No really objectionably noisy machines were entered, but on the other hand no entry reached the desirable degree of silence. Transmission systems in particular were frequently objectionably noisy. Much of this mechanical noise is produced by the absence of proper lubrication. Mechanical clatter is inexcusable.

"Brakes have improved enormously, more particularly front wheel brakes. Special brake drums are now the rule rather than the exception. Improvement in some of the front wheel brakes is still needed, however. Two points requiring attention are: (*a*) Sidecar brakes and the fitting of ratchet brakes to sidecar outfits to enable them to hold on a gradient. (*b*) Hand-operated adjustment should be provided, as it is not pleasant to require tools every time either brake has to be taken up.

"The general aspect of most machines from the point of view of multiplicity of small parts is better. Accessibility on lightweights is important, as is more standardisation of nuts. Gear boxes or their equivalent in chain transmission are still offenders on the score of being too light, with clutch parts and gear wheels of rather small dimensions. An undue proportion of retirements was due to gear box failure.

"Steering heads still need strengthening and larger races should be used.

"Wheel bearings in many cases show looseness and the rear wheels of several of the lightweights had suffered considerably. Rims were very good.

"To lift a relatively heavy machine on to a stand is not easy, and the fitting of prop stands in addition to the rear stand would be convenient for short stops.

"Sidecar connections were sound throughout, and this despite the fact that the sidecars themselves were mostly heavy.

"Many machines had clutch controls operated with difficulty from badly placed handles.

"Judging by the frequency of stops for re-filling, it would appear certain machines are not economical.

"As regards the finishing machines, it was very notable that general mechanical design and construction had been very much improved. Only three machines which completed the course lost the maximum award on account of deduction of marks at the final examination. This is a vast improvement over any previous Six Days Trials result, and is a matter for congratulation to manufacturers. Now that engine power is ample there is no tendency to cut weight in important parts with the result that from a mechanical point of view construction is much sounder. On the other hand, the percentage of retirements, namely 30.3 of starters, is the highest of any trial since the war."

A. E. DAVIDSON, LIEUT.-COL.,
Judges,
T. W. LOUGHBOROUGH,
Clerk of the Course,

A MOTOR BALLOT.

Novel Scheme to Swell the Funds of a Hospital. Motor Cycles and a Light Car among the prizes. Motorists asked to Name Most Popular Cars.

OBSERVANT motor cyclists will be much interested in a competition now being run in aid of the Coventry and Warwickshire Hospital.

For the sum of one shilling the entrant is given a list of forty motor cars on the British market, and is required to place fifteen in order of popularity. The sender of the list most nearly tallying with the general voting wins.

All the proceeds go to the hospital, the prizes being presented by various motor and motor cycle manufacturers. These include a 1922 Crouch light car, a Coventry Mascot sidecar outfit, and Triumph and McKenzie lightweights.

Tickets are obtainable at the Motor Ballot Office, 7, Hay Lane, Coventry.

BE READY!!!

Daylight saving ends October 7th.

You will then require a

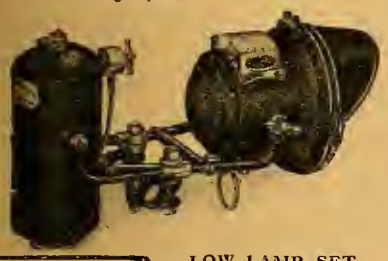
"LOW" GENERATOR LIGHTING SET.

The features of the "Low" Generator are well known.

It stores the gas and can be turned on and off until the whole of the carbide is used.

Always ready for use.

In the Lamp set the gas passes from the Generator through one of the hollow bracket arms and the cross stay which acts as a filter. No rubber tubing required.



14 days' free trial. Particulars and Illustrated Catalogue post free from:

LOW LAMP SET.

Lamp set as illustrated £4 10 0
Generator, Motor-cycle size £1 19 0
Generator, Combination size £4 10 0
Carriage & packing 1/6 *extra*

Carriage F.O.R. Bradford.
Please Send Old Piston with Cylinder.

HEPWORTH RINGS
conform to Air Board Chemical Analysis and Physical Test.
HEPWORTH PISTON RINGS were used on the Napier "Lion" engine in the D.H.9 Biplane, which broke the world's altitude record, and also on the same type of engine which was fitted to the machine winning the British Aerial Derby, 1921.

HEPWORTH & GRANDAGE, Ltd.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.

Yours faithfully,
JOHN O. GRIFFITS.

122, Shortlands Road,
Sittingbourne, Kent.
August 17, 1922.

Mr. Brodrick,
The South-Western Appliance Co.

Dear Sir,
The St. Helier Building arrived on Saturday, two days before promise of delivery, and we are more than satisfied with it.

We erected it on Wednesday and it went together like clockwork. I am very pleased we left the order with you, as all who have seen it think the value is remarkable and admire the artistic appearance. Trusting and believing it will get you further orders from this district.

Yours faithfully,
THOS. E. KENNETT.

You are Sure

of satisfaction when you deal with me, as every article is sold on the "Money Back if not satisfied" principle.

ANY PART FOR ANY MODEL

Douglas

BY RETURN OF POST.

Here are some of my Specialities :—

TWIN RINGS. Give more power—perfectly gas-tight—prevent carbonising as oil cannot pass the piston—wear indefinitely—need no running in. For 2¾ h.p. Douglas, price **1/6** each; 4 h.p. Douglas, **1/8** each; Sunbeam, Humber, and Rover, 75mm. bore, **1/8** each; B.S.A., Triumph (pre-1919), Rudge (pre-1921), New Hudson, 3½ h.p. Singer, L.M.C., 4 h.p., and Precision, 3½ h.p., 85mm., **1/9** each.

ZOOM ! ZOOM ! ! The fashionable and efficient exhaust system. Adds pounds to the appearance of any Douglas and lets the engine give off its full power. In beautifully burnished copper, price **30/-**. In burnished nickel, price **33/6.**

THE TONY COMBINED ALUMINIUM FOOTBOARD AND FOOTRESTS. Beautifully finished—giving a

natural riding position. A real solid cast job. Something that lasts for ever. Price **30/-** per pair complete.

AN IMPROVED DOUGLAS CYLINDER. Get more power from your Douglas. 25% guaranteed on all models. Larger fins, and more of them, and bigger ports. If you have a 1912-1921 model, try them and you'll be surprised. Price **50/-** per cylinder.

THE CORAM PISTON, fitted with radiating internal fins. Correctly designed, much lighter yet stronger than standard. Fitted with the patent twin rings in one groove. Complete with rings and gudgeon pin. Price **29/-** per pair. Insist on having these fitted when your mount is next down, and you'll never regret it.

CORAM'S PATENT COMBINED ALLOY VALVE CAP. My latest idea. Never blows out, never seizes in the threads. Prevents knocking and overheating. A real boon. For 2¾ h.p. and 4 h.p. Douglases. Price **4/-** each.

IGNITION, LIGHTING, ETC.

MAGDYNAMO Engineering Co., Ltd., for magnetos, spares, and repairs.

MOTOR Cyclists fit reliable high quality magnetos now and avoid certain failure of inferior magnetos.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Start one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied; will certainly recommend these magnetos."

INDIAN Machine Owners.—Your high-class machine deserves a high-class magneto. We want 1,000 Bosch 42 magnetos; send your magneto and £4 to us, and we will immediately despatch you a Bosch D.A.L.

WHY is it that the leading Motor Cyclists—the men who know—are almost all sending to us for their Magnetos?

THERE must be a reason; there is; it is because the Magnetos of quality and guaranteed service, supplied by Magdynamo, beat all other Magnetos.

MAGDYNAMO will take your old Magneto in part payment.

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you not want a reliable magneto with 12 months' guarantee and service that will give you starting without worry, smoother running, and more powerful engine and better results from your Douglas? Then send for a Best enclosed waterproof type Bosch XA2 magneto to-day, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P. and M.'s, with 12 months' guaranteed service, price £7/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparking plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs.. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if urgent, and return it with a written 12 months' guarantee. While your magneto is being repaired we will lend you another free of charge. We could not make these offers if we were not certain of the quality of our work.

YOUR old magneto will be equivalent to new at a very low cost. Send us your defective magneto now.

10h.p. Buckingham, new 3-seater, for hot solo o combination, with cash.—Moss, 20, Regent St Leamington Spa. [406

ROVER Combination 3½h.p., countershaft; e change 2¾h.p. Douglas or similar.—187, King Cross Rd., London. [401

EXCHANGE Grand Prix Morgan 10h.p. for lat Triumph and sidecar.—Salmon, The Terrace Wokingham, Berks. [424

EXCHANGE Morgan De Luxe, value £85, f Clyno, A.J.S., Matchless combination.—125, Mos ley Rd., Darlaston. [411

3½h.p. Motor Cycle, mechanically perfect, for cycl and cash; or sell £18.—9, Riversley Rd., Nun eaton, Warwickshire. [435

3h.p. Fafnir (advertised) for good underslung sidecar or dynamo lighting for Triumph.—Clark, 4 Harders Rd., S.E.15. [427

JAMES 3½h.p., clutch, interchangeable wheels, fo 5-6h.p. F.N. with gears.—22, Clapham Rd., Ken nington Gate, S.W.9. [401

NEARLY new 3½in. Drummond treadle lathe, com plete, for lightweight, Douglas preferred.—10 Malvern Rd., N.W.6. [432

1914 4h.p. Triumph, 3-speed, excellent condition cash, for 1917-18 Triumph; sell £35.—Round ing, Lowthorpe, Yorks. [387

EXCHANGE 1918 Royal Enfield Combination, fin order, for light car.—1, Springfield Par Crescent, Catford, S.E.6. [361

F.O.C.H., the exchange specialists; best price allowed; easy payments arranged.—5, Heath St Hampstead (near Tube). [386

GIVE £40 and 1915 3-speed Douglas, fine con dition, for good 8h.p. combination.—Walton Dawson Square, Burnley. [371

EXCHANGE 18h.p. Humber Lorry, tipping, fo modern combination or powerful solo.—Dimbleb Ashover, nr. Chesterfield. [371

HARLEY Combination, 50 guineas; sidecar, enamel and plate unsoiled. £85; lower power part.—12 Sutherland Rd., Croydon. [440

1918 Douglas Combination 4h.p., fully equipped any trial; £55; or lightweight, cash.—46, Ve non Gardens, Seven Kings. [400

2-SEATER 8.6h.p., water-cooled, 4-cyl. engine, goo condition, for twin sidecar combination.—4 Clovelly Rd., Hornsey, N.8. [456

EXCHANGES.—See Ariel, Hobart, James, Scot and miscellaneous columns.—Kents, 417, Lord St Southport. 'Phone: 1273. [427

MORGAN Wanted for A.J.S. Combination, full equipped, excellent condition, tax paid; £85.— 73, Sunny Gardens, Hendon. [391

1920 4h.p. Harley, 3 speeds, clutch, kick-start, fo lightweight and cash; sell £65.—198, King St Hammersmith. 'Phone: 2474. [429

NORTON Big 4 1920 Combination, exchange for stroke lightweight, cash adjustment, photograp free.—Fred Spalding, Chelmsford. [428

1921 Royal Ruby Combination for solo Triumph Norton, Sunbeam, or similar. See Royal Ruby —Elm Cottage, Goring-on-Thames. [394

1¾h.p. Engine, dry battery coil and carburette what offers in exchange, or sell £4; suit pus bike.—Redding, New Ground, Tring. [376

2-SEATER Unic, 12h.p., convertible body, perfec exchange motor cycle, value £50.—Broadhurs 887, Lea Bridge Rd., Walthamstow. [39

Cheaper Petrol.

ALTHOUGH the reduction in the price of petrol has been made at the end of the summer, during which period, naturally, more motor cycling is done than in the other seasons of the year, it is none the less welcome. A reduction of sixpence per gallon may not appear a great deal to the owner of the most economical type of motor vehicle—the motor cycle—but had the change in price been a rise instead of a fall there would have been a great outcry.

When one obtains 100 m.p.g., fuel costs, even at two shillings and sixpence per gallon, are extremely low, and for this reason, perhaps, there are many motor cyclists who are apathetic concerning the amount saved. The reduction, after all, only means the saving of a shilling on a hundred-mile outing on a big twin outfit. Nevertheless, if the owner of such a machine covers 5,000 miles in a year the saving is approximately the price of a new outer cover or free petrol for 1,000 miles on the basis of the old price. The lightweight owner who obtains 100 m.p.g. saves 25s. over a mileage of 5,000. Thus he also would gain the equivalent of free fuel for 1,000 miles. That is what the 20% price reduction means. A further drop in price by the same amount would bring the cost of fuel back to the pre-war figure. Considering the increased cost of every commodity since 1914, two shillings per gallon may be regarded as a very fair price at the present time.

Whether fuel prices will eventually fall to the 1914 level or below it is a moot point. Increase in the use and production of any commodity usually has the effect of reducing price, but, as in all other cases, price depends upon supply and demand. At the present time, it is obvious, supply exceeds demand, and this position confounds the prophets who told us that the wells were running dry and that it was inevitable that prices would rise instead of fall.

This reduction in the price of petrol must affect every motorist, whether he uses a powerful car or a miniature motor cycle. The saving is proportionate to the size of the engine and the number of miles run, which brings to mind the fact that the present system of taxation is far from ideal, since the owner of the smallest lightweight who runs it for 1,000 miles per annum contributes the same as his contemporary who runs a machine which may have an engine three times larger and which may cover 10,000 miles in the year. A tax on petrol instead of a fixed sum per machine would be equitable to owners of all types of vehicles.

The Judges on the Six Days Trials.

THE judges' report on the Six Days Trials is in many ways a most useful document, but somehow it fails to help the would-be buyers of a motor cycle as much as it might.

Naturally, since the Trials were, and are, intended to improve design, the report must largely be addressed to the manufacturer. But surely it is also the intention of the A.C.U. to help the man-in-the-street in the choice of his machine? If so, a little more outspoken comment on the performances, good, bad, or indifferent, of various makes in the event would be much more valuable than assertions that motor cycles in general have improved or need improvement. Even a close study of the tabulated results does not give this information.

In other words, instead of listing the days of the week on which the retirements occurred, why not give the causes thereof? And instead of the totals of marks lost under the condition heading, why not the exact reasons?

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

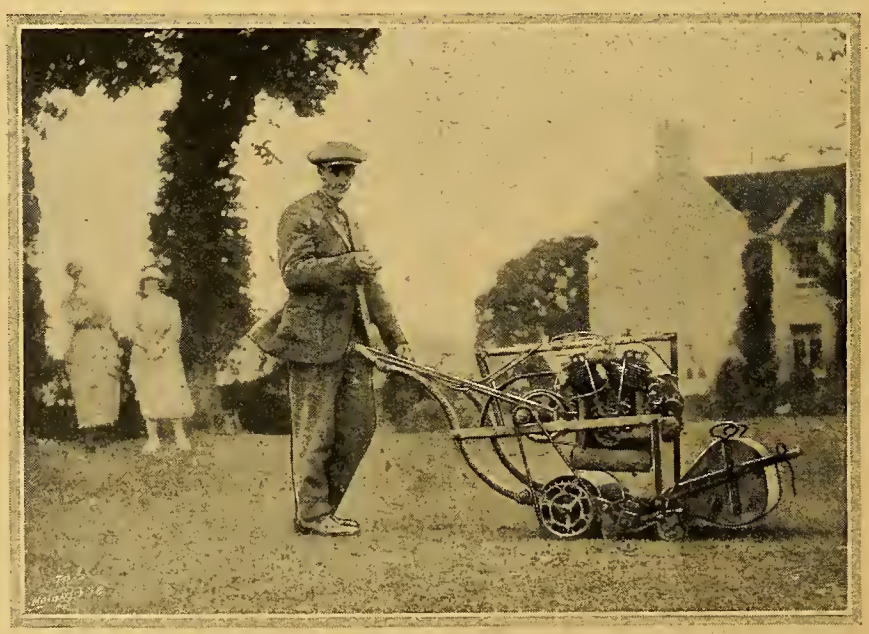
BY "IXION"

A Kindly Thought.

OF the making of gadgets there is no end. Out of a letter in this morning's mail dropped a neat little wrist strap of dove-coloured leather, complete with transparent pocket. A Leicester reader is marketing it to prevent our getting pinched for not having driving licences with us when we change out of our navy blue office suits to the loud checks in which we dazzle maidens of an evening. His kindly thought has quite missed fire, so far as I am concerned. *Inprimis*, in these poverty-stricken days I only run to one suit, which is worn to destruction, so the emergency which he envisages never arises. Secondly, my local authority imposes a licence card the size of a paving stone, which I couldn't possibly wear on my wrist.

Cone or Ring?

I HAVE just been reading a treatise on valve grinding by an expert, and notice that he insists on two principal points. The first is that it is a mistake to rest content with a mere "ring" contact, as shown by a bright line all round the valve head; the grinder should aim at a "cone contact," the entire facial area of the valve being a gastight fit with the seating. The second point is that it is a blunder to smear a second dose of abrasive on the valve until by frequent oscillations and liftings the whole of the first dose has been ground out, and the valve has become so dry that it will even squeak. The aforesaid expert considers that most amateurs apply abrasive far too freely, and that the abrasive gets squeezed up towards the top of the valve and seating, with the result that at the end of the job the face of the valve is no longer a straight line, as viewed in cross section. Oddly enough, he lays no stress on a crime which many owners commit every time they touch a valve—that of leaving a lot of abrasive powder in the valve chest. What a lucky thing it is that *inlet* valves so seldom need grinding!



THUS HAVE THE MIGHTY FALLEN! Those of our readers who recall the "Blue Devil" racer ridden in competitions some years ago by Mrs. Lord, nee Miss Muriel Hind, will be interested in this photograph showing the latest duties of the famous Rex engine. Mr. R. Lord, also an old Rex rider, is at the tiller of the home-built lawn-mower.

The Jaguar.

ON September 14th we described the fourteen-cylinder radial air-cooled engine, designed by Armstrong Siddeley for the Air Ministry. Five years have elapsed since I saw the original edition of this engine in its rough stage, and goodness only knows how much experimental work had already been expended on it. Contrast this meticulous care and patient research with the happy-go-lucky methods of some lesser engineers, who think of an engine in August and market it in November. Of course, a 360 h.p. air-cooled engine is not merely a modification of an existing unit, and demands much more care than any new motor cycle engine. I believe this engine started with a single-cylinder unit, and that part of its development consisted in taking the temperatures of almost every item in the engine. Accessibility is always a difficulty with

Occasional Comments.—

power units of this type, and one form of mounting it in a fuselage consists of a hinged bulkhead, which opens forwards like a cupboard door, bringing the engine with it, so that the rear is as get-at-able as the front.

Driving for Silence.

I HAVE never seen any public emphasis laid on the fact that a motor cycle is far more silent in the hands of a good driver than the same machine would be when handled either by a clumsy duffer or by a demonstrative knut. At present I am chiefly riding a B. and S. Beardmore and a four-valve Triumph. The former is a very quiet machine, but it would strike my neighbours as very noisy if I let the engine run too fast in neutral, if I used the lower gears unnecessarily near houses, revved it hard on first or second gear, or opened its rather spitty release valve when shutting the throttle. Any average driver should be able to prevent this machine from being a nuisance to anybody. By contrast, the four-valve Triumph is capable of a full-throated roar when opened out, and asks for quite delicate lever manipulation if it is to be kept on top gear in traffic or round sharp bends. A thoughtless fool would display no self-restraint with this engine in streets and villages. If forced to come off top gear at any momentary emergency, he would smash the throttle wide open on second, yank up the road with a thunderous bellow, snick in top gear again, and repeat the performance at the next tram or the ensuing twist in the lane, as the case might be. He would get pinched sooner or later, and the usual correspondence in the Press would begin. The A.C.U. and the famous audiometer would probably be called in, and the machine might get acquitted of noisiness after a demonstration during which it would be properly handled. But a mannerly rider can easily take it through any town or village without causing the most sour-faced policeman to bristle. If the present campaign for more silent motor cycles induces the thoughtless type of driver to keep his exhaust as mellow as possible near houses it will do good.

Manners Maketh Man.

A HARDY youngster without a nerve in his make-up can easily fail to realise how trying quite a moderate noise may be to others. For example, near Benzole Villa there is a narrow neck in a village street. On either side of the 14ft. road cottage doors open direct into the street. High walls on either flank convert the bottle neck into a regular soundbox, and there is a cellar beneath the road. Every time a knut with overlap valve timing, stovepipe exhaust, and Chubb brand of compression passes by, the row really asks for gunwads; it reminds one of being in a battleship turret when a pair of 16in. guns are loosing off on full charge. In the daytime the uproar may not irritate the cottagers on either side very particularly. But when the knut is going home towards midnight, and paterfamilias, who may be a cowman due at work by 5 a.m., is trying to sleep!

A gentleman always keeps his engine noise down to the absolute minimum when he is passing a bit of road calculated to magnify his exhaust, for he never knows what unfortunate suffering he may cause. We motor cyclists are a healthy crowd, but we ought to realise that there are physical conditions which make real noise hurt as much as a blow. My own idea on the vexed silence question is that I don't mind how much noise a motor cycle can make on occasions, but the public have a right to insist that every machine should be capable of quiet running, and should be handled with courtesy and common sense.

IN THE SOLITUDE OF THE SCOTTISH HILLS. A Scottish tour in autumn has a charm of its own to the lover of the open. On account of the wind-swept nature of the roads an under-powered machine is inadvisable, for gales may sometimes be as difficult as gradients. Mr. H. Mortimer Batten, the well-known writer of nature stories, gathering local colour on his Beardmore near Dufftown.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

TENDENCIES OF DESIGN IN FRANCE.

Accidental Conditions and Apathy of Capital Checking Development. Concentration upon Miniature Machines and Motorised Bicycles.

FRANCE is quite as progressive as any other nation so far as many things are concerned, but visitors to the seventeenth annual Automobile Salon in Paris, which opened its doors yesterday, are likely to come away with the impression that the motor cycle industry lags behind. At the same time, there is no lack of originality in details of construction and assembly.

Those, however, who penetrate as far as the annexe at Les Invalides, in which all the motor cycle exhibits are being housed this year, will see that French constructors have allowed themselves to be outclassed this year by all the other principal nations in the things that matter.

England has led the world now for some time in motor cycle manufacture, and the French are the first to admit it; but now also Italy shows more enterprise and promise in this field, with the Bianchi and Garelli machines, and high-powered American machines are very popular in France.

Ultra-Lightweights.

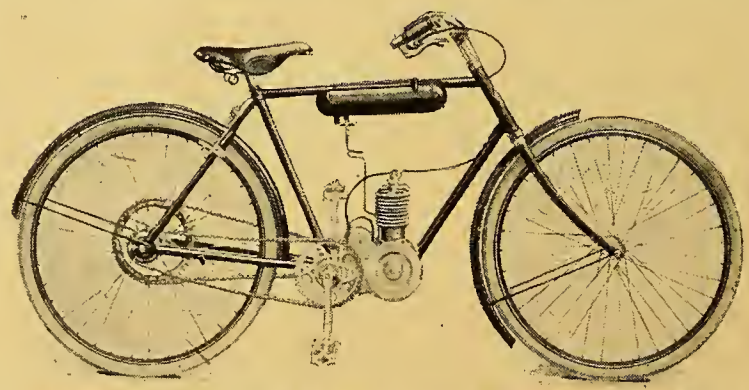
Before examining the causes of the present state of affairs, it will be well to review briefly the present tendencies in French design. Almost all the energy, the ingenuity, and capital available are directed towards the production of lightweight and ultra-lightweight machines and motor attachments for pedal bicycles. Indeed, the dividing line between the ultra-lightweight and the motor-assisted bicycle is hard to lay down definitely.

The year 1923 will probably see a considerable increase in the numbers of machines which are styled "Bicyclettes a moteur," which weigh about 70lb. and cost something under £30. They are fitted with diminutive single-cylinder two-stroke engines, chain drive to countershaft, and final transmission either by belt or chain. Other features common to most representatives of this class are arrangements for detaching the tank quickly and easily, and the provision of a spring fork generally on the same principle as the original Triumph design. The frame, saddle, handle-bars, mudguarding, brake work, and so forth, are all in the push-bicycle class, as are also the tyres. The object of making the petrol tank easily detachable is to enable the machine to travel by rail as passenger's luggage, since apparently the French railways will only accept it in this way if it is thus obviously innocent of petrol; also the limit of weight imposed by the railways in this category is 30 kilogrammes (66lb.).

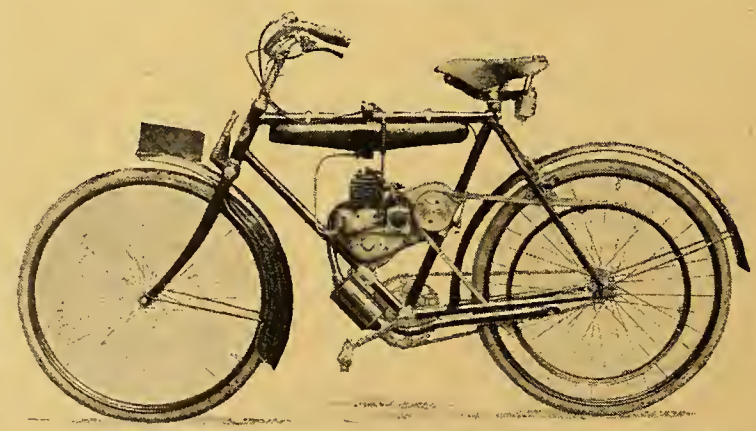
Alcyon, Griffon, and Clement are amongst the best-known representatives of this class which conform to the particulars given above, and these firms are understood to be laying themselves out for a considerable production next year.

An Intermediate Class.

Next in order of importance in the French industry comes the medium lightweight machine generally fitted with a single-cylinder two-stroke engine approximating to the British 250 c.c. and 350 c.c. types. They have two-speed gear and chain-cum-belt or all-chain transmission. Two-stroke machines of this type have certainly gained in popularity in the last year or so. The example has been set by England, and several of them are more or less faithful copies of British designs. The Terrot, the Magnat-Debon, and the Soyer are representative examples of this class, the first-named being, however, a machine which shows considerable originality in its general layout, and which has proved particularly successful in the hands of the general public during the past season.



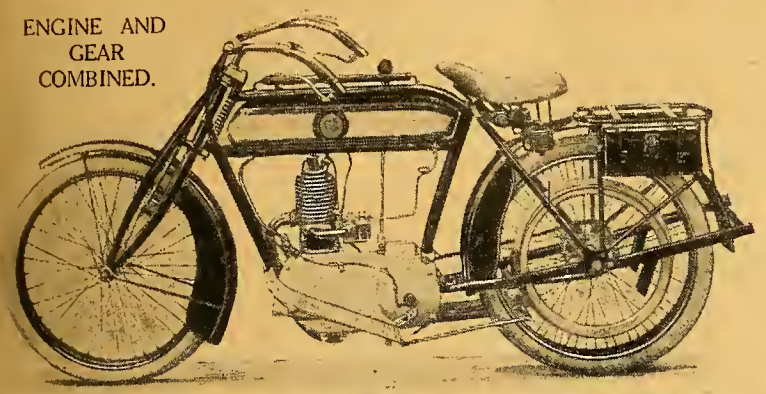
Standard motor cycle practice in engine location and transmission is followed in the Alcyon lightweight.



Another effort from the same works—a belt-driven two-stroke called the Labor.

The 65 mm. × 80 mm. two-stroke Alcyon with Ballot engine-gear unit and two-speed gear box is a somewhat larger and more substantial solo mount than those mentioned above, but, broadly speaking, this class represents the French trade's reply to the demand for a touring solo mount. The intermediate type of machine, the single or twin of

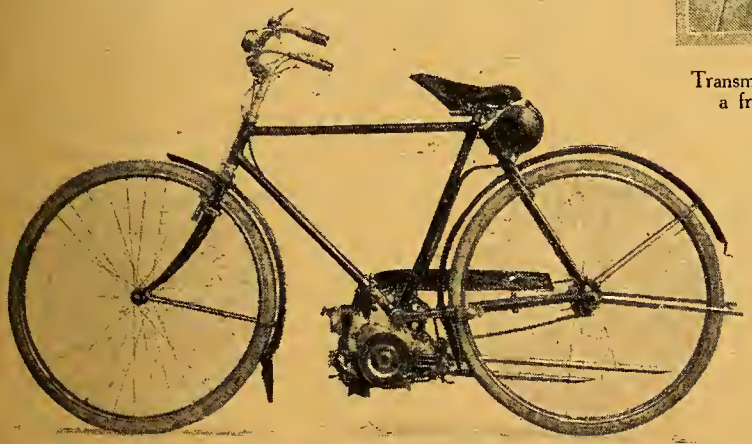
ENGINE AND GEAR COMBINED.



Unit construction of engine and three-speed gear box is a feature of the E.B. two-stroke lightweight.

500/600 c.c. capacity, has been sadly neglected by French manufacturers, although there is one newcomer in this class, the 500 c.c. single-cylinder Gnome le Rhone. The high-powered class also has not received as much serious attention as might have been expected, considering its continued popularity in England and America, and considering also the nature of French roads, which are such as to render long-distance touring on ultra-lightweight machines far from ideal.

The René Gillet, the Orial with M.A.G. engine, and the Bleriot are representative of this class, though the last-named firm, unfortunately, has decided at the last moment not to show at the Salon, owing to excessive pressure of aeronautical work which one fears may be due to the somewhat troubled political situation with



On the Moachon-Edmond a tiny flat twin four-stroke engine is slung under the bottom bracket of what appears to be an ordinary pedal cycle.

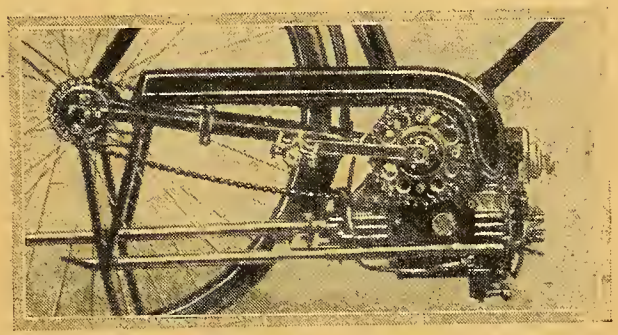
its wars and rumours of wars. Its absence will be specially regretted on account of the fact that the 750 c.c. big twin side-by-side two-stroke sidecar machine described last week was to have been introduced. The side-by-side twin four-stroke Bleriot has been improved in detail, and a sports model with overhead valves has been designed and built by the firm.

A Diminutive Flat-Twin.

Numerous motor attachments for fitting to ordinary pedal bicycles are made in France at prices ranging from 400 to 800 francs. Those which are attached over the front wheel strike the observer as being somewhat unpractical both as regards their effect on balance and steering, and on the structural strength of the bicycle. A very ingenious example was, however, recently brought to our notice hailing from a small workshop at Aix-les-Bains, in which a Lilliputian flat twin is clipped to the bottom bracket and drives by means of a gear wheel bolted to and concentric with the ordinary pedalling chain wheel. In this case the weight and centre of gravity are well disposed.

Capital Not Interested in Motor Cycles.

What, then, are the factors which have placed the French motor bicycle trade in its present inferior position and have led it to concentrate on lightweight and ultra-lightweight machines? A considerable experience of France and the French leads one to reply that they are lack of interest on the part

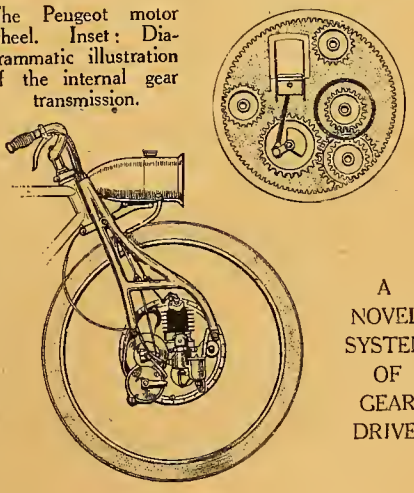


Transmission in the M.E. is through the ordinary pedalling chain, a free-wheel being fitted in the bottom bracket sprocket.

of business men with large capital at their disposal, and the fact that the Frenchmen who could undertake serious motor cycle manufacture are not and never can be practical motor cyclists themselves; moreover, the average Frenchman who wishes to take a companion with him on his excursions does not appreciate the sidecar outfit at its proper value. He prefers any sort of contrivance on four wheels which, with the aid of a fertile imagination, he can call a car.

On the other hand, there is no

The Peugeot motor wheel. Inset: Diagrammatic illustration of the internal gear transmission.



A NOVEL SYSTEM OF GEAR DRIVE.

Tendencies of Design in France.—
lack of keenness amongst young Frenchmen, and there is no lack of designing talent, but designers and inventors, in France as elsewhere, are unable to realise their ideals commercially without the support of capital. It is certain that there is a rich reward awaiting the company which first tackles the problem of motor cycle construction on serious and sound lines in France and with large capital. One manufacturer stated to our representative that he supposed that labour was cheaper in England than in France, since, in spite of the rate of exchange and the import duty, a certain well-known British engine manufacturer could put small engines into France at least as cheaply as they themselves could make them.

Where Britain Scores.

The cost of living, and therefore also that of labour, are quite as high in England as they are across the Channel, and the statement in question redounded entirely to the credit of the British manufacturer, whose methods and organisation were superior.

Taxation is comparatively very much in favour of the French manufacturer, being at the rate of only 20 francs per annum for an ordinary motor bicycle, and 10 francs for an ultra-lightweight; and, finally, road conditions are an important factor in the case. The roads are worse than in England, but not nearly so much worse as is generally supposed. They are, by their straight, well-graded nature, suited to sustained high speed with high-powered, efficiently sprung machines, and yet the French trade does not tend towards the construction of these types. The development of very light machines which, though quite unsuitable for serious long-distance touring on French roads, can be taken about by rail and kept conveniently upstairs in flats in which so many French town-dwellers live, appears to be a side issue or backwater in relation to the main problem; and, after studying the question, one is left with the impression that the French will wake up presently and take the place in the motor cycle world which should be theirs by reason of their early pioneer work and their mechanical genius.

KNOCKING.

Detonation of Un-ignited Gases which sets up Vibrations in the Cylinder Wall.

THE puzzling phenomenon popularly termed knocking has lately been the subject of careful research, and several conclusions are now generally accepted as proved.

In the first place, the particular type of knocking which is most difficult to explain has nothing to do with loose bearings or mechanical defects. Experiments go to show that the sound is produced by vibrations of the cylinder wall, which are set up in the following manner:

The burning part of the charge expands and drives before it the as yet un-ignited portion, thus compressing it and rendering it liable to detonation. When the unburned portion is in this state, it is suddenly ignited either by auto-ignition or by the burning portion, and does not explode at a comparatively slow rate of burning, but detonates instantaneously, thus giving the containing vessel—the cylinder head and piston top—a violent blow instead of a push. It is easy to understand that this sets up rapid pressure oscillations, as the force of the detonation evens out through the still burning portion of the charge which was first ignited. This in turn causes the vibration of the cylinder wall which produces the characteristic knocking noise. These pressure oscillations are clearly shown on the indicator diagram of a knocking engine, and seem to be in the neighbourhood of 800-900 vibrations per second—which is approximately in the middle of the audible range.

Actual indicator diagram of a badly knocking engine running at 1,080 r.p.m. In this case the compression ratio was 4·5 to 1 and the spark advance 30°.

Apparently the very high compression of the unburnt portion of the charge and its consequent detonation is the predominating factor in knocking.

There appear to be three ways of preventing it:—

(1) Avoid compressing the unburned part of the charge to the point of auto-ignition. It is well known that the lower the compression ratio the less liable an engine is to knock, other things being equal.

(2) Retard the ignition. In this case, the detonation will not take place until the piston is travelling downward, and thus rapidly increasing the volume of the combustion space. If the ignition is timed late enough, detonation will not take place, as the increase in volume will be early enough to prevent the pressure rising to detonation level. Loss of power will, of course, result.

(3) Use multiple spark plugs. In this case the effect seems to be that the combustion waves impinge upon each other. By this means the auto-ignition of the remaining unburnt charge is by no means avoided, but the force of the detonation is cushioned by the body of gas between the exploding core and the cylinder wall. The explosion wave, when it hits the wall, is both damped and distributed so as not to give rise to local deflections and vibrations.

Indestructible Oil Film.

It is practically certain that knocking has nothing to do with metallic contact between gudgeon pin and bush, *i.e.*, destruction of the oil film. It has been shown that a film only two or three molecules thick, or, say, about $\frac{1}{40000000}$ of an inch, is capable of acting as a lubricant, and lubrication should, therefore, be perfect with a film $\frac{1}{80000}$ in. thick. The corresponding hydraulic pressure developed would then be some 90 tons to the square inch—which pressure is, needless to say, never attained in a motor cycle engine. A good lubricating oil seems to weld itself to a metallic surface, and no attainable degree of pressure is capable of destroying it.

G. T. C.

SILENCE FIRST.

New Poppe and Packman Machine called "The Silent Three." A serious attempt to Eliminate Noise and to Provide Protection.

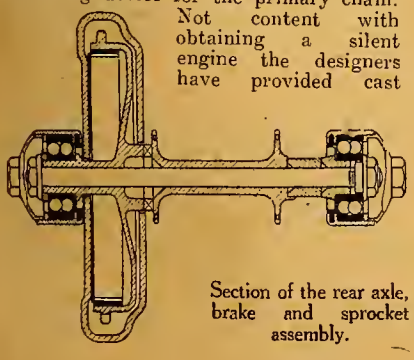
IF the noise which undoubtedly is produced by a number of existing motor cycles could be reduced, and a really silent machine manufactured and sold to the public at a reasonable price, there is no doubt whatever that there would be a considerable addition to the ranks of motor cyclists. With this object in view Messrs. Packman and Poppe have produced their new machine, which is to be known as "The Silent Three."

A 350 c.c. Barr and Stroud engine is employed as the power unit, and as is well known, the absence of poppet valves renders it particularly free from mechanical noise, while its power and reliability have already been proved.. In addition, special precautions have been taken to render the exhaust as quiet as possible, and we may state from experience with the preliminary experimental machine, that the designers have already met with considerable success, though the latest model, which will be exhibited at Olympia, will have further improvements in the silencing arrangements. First of all, the exhaust is led to a large aluminium expansion box, thence to a second sheet-metal chamber which has an internal division, and carefully designed inlets and exits.

To the engine is attached, through special plates, a three-speed Sturmey-Archer gear box with clutch, kick starter, and shock absorber, the whole forming a unit which is suitably mounted in the duplex main frame.

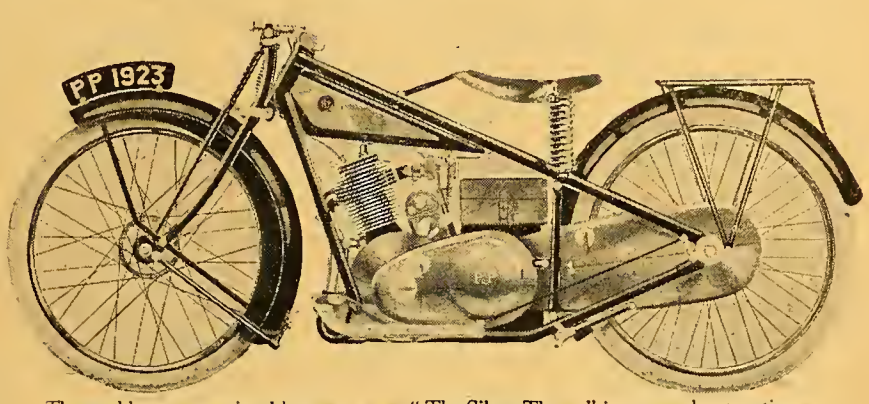
A Revolving Rear Axle.

The rear spindle is carried in double row self-aligning ball bearings, permanently housed in the rear frame lugs, with an expanding band brake fitted in the rear sprocket, the rear wheel being quickly detachable by removing the spindle and a short distance piece. To enable the wheel to be more simply erected the distance piece is located by a semi-circular boss, allowing the knock-out spindle to be pushed through with the greatest of ease. Rear chain adjustment is gained by sliding the engine and gear unit bodily forwards, incidentally obviating the necessity for adjusting the rear brake. In addition, the distance between the gear box and engine is also capable of extension so as to provide a tensioning device for the primary chain.



Section of the rear axle, brake and sprocket assembly.

Not content with obtaining a silent engine the designers have provided cast aluminium chain cases which entirely enclose both chains, so that the transmission by running in oil shall be sweet and silent in action. The outside flywheel is also encased in an aluminium cover.



Thoroughly unconventional in many ways, "The Silent Three" is extremely attractive in appearance. A complete cover for the engine will be fitted.

Mechanical Lubrication.

Above the gear box lies an oil tank of considerable capacity, from which oil is fed to the engine by a Best mechanical pump; no sight feed is fitted, since the pump has been found to be perfectly reliable. On the top of the oil tank is a tool box, in the base of which are two nuts, which must be slackened to adjust the primary chain. Since, however, the tool box must necessarily be opened for this process, the unorthodox position imposes no hardship on the owner. Both gear box suspension bolts pass through special tubes in the oil tank, and the whole unit is thus rigidly clipped together. (Provision is, of course, made for the prevention of "pinching" the tank.)

The whole machine bristles with novel points. For instance, the steering head is mounted in special cup and cone races, designed to take radial loading as well as thrust. The handle-bars are mounted in the head lug and fork pivot, which fit on a splined head tube, the outer diameter of the splines being screwed. Thus a single large blind-ended nut is sufficient for the adjustment, and this in turn is locked by a spring ring, the end of which passes through a hole to the inside of the nut, and drops into one of the spline grooves.

Duplex Frame Construction.

From the head the duplex frame tubes pass direct to the rear spindle; further duplex tubes drop behind the mudguard and form a cradle for the engine and gear, thence joining the rear spindle supporting lug. Two additional tubes corresponding to the normal seat tube join the members already mentioned

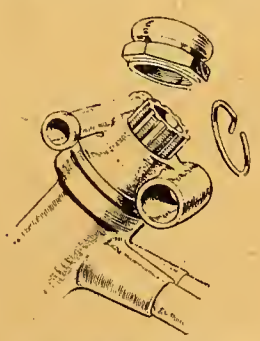
Brampton Biflex forks are employed, and the saddle, which is pivoted well forward of the peak, is suspended on particularly long coil springs at the rear, an important feature being that it is well in front of the rear wheel, and thus provides additional comfort. $26 \times 2\frac{1}{2} \times 2\frac{1}{4}$in. tyres are fitted, and the mudguards, which are 6in. wide at the rear, and $4\frac{3}{4}$in. in front, have a full $1\frac{1}{2}$in. clearance from the tyres. Further, an internal expanding front wheel brake is employed.

The engine and gear unit are enclosed by quickly detachable side shields which drop from the tank to the large aluminium footplates. These footplates are rubber covered, and are specially formed at the front end so as to fit the leg shields, which, in addition, form air scoops for deflecting the draught over the slightly inclined engine.

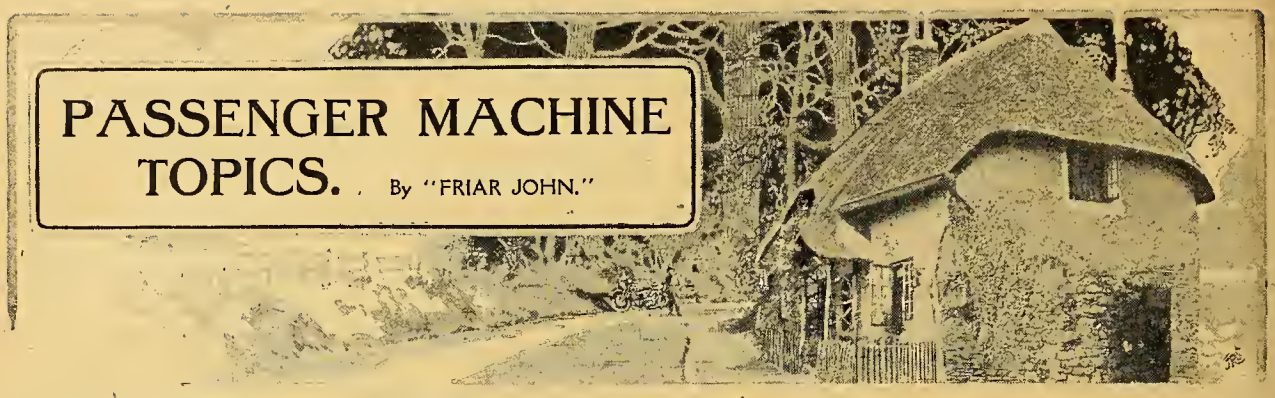
The gear-striking lever is mounted on the box in such a manner that adjustment of the chain does not upset the striking arrangements.

A front wheel stand is fitted, and the rear stand is of the spring up type, being carried under the chain stays. It should be added that there are no clip joints employed throughout this machine, even the lamp bracket lugs being brazed in position.

The manufacturers, whose address is The Brenda Works, Earlsdon, Coventry, have made a very serious effort to produce a type of vehicle which is greatly needed.



Splined steering column with nut and locking ring.



PASSENGER MACHINE TOPICS.

By "FRIAR JOHN."

Low-Powered Sidecar Outfits. The Sidecar Motor Coach. Further Protection for Passengers.

A FEATURE of the forthcoming exhibition at Olympia will, I think, be the number and diversity of the lightweight outfits offered at low prices. By this I do not mean machines capable only of taking a loaded outfit along trunk roads, but 350 c.c. sidecars that will carry luggage and passenger across the Welsh or Scottish hills with ease. We know well by now what these little fellows of 350 c.c. or so can do—what they have done in speed and reliability trials. We shall hear still more next year of the 350 and 400 c.c. engine, and more than ever the year after. Low cost and economical upkeep will demand for the low-powered outfit increasing attention, both from the public and manufacturer.

A KEEN sidecarist in Accra, British West Africa, wrote some time ago for advice regarding the purchase of an outfit suitable for himself and wife and five children. My correspondent, whose sense of humour is sound, says that a friend suggests something in the style of a small char-à-bancs as being most suitable. That may be so, he says, but he wants a sidecar, preferring it to a char-à-bancs. But what struck me most in the letter was a statement saying that an eminent British firm had refused to vary their specification to suit my correspondent's requirements. Mind you, the order would not be for much less than £220. Such is enterprise. Dunhill's, Ltd., however, are solving the problem of sidecar accommodation for him. So far so good; but he finishes up with the following staggering poser: "What do you think would be the most suitable power for this sidecar (seven up, remember), taking into consideration pulling power, reliability, strength, and economy? I give below engines or machines from which I want to choose: J.A.P., M.A.G., Anzani, Blackburne, Clyno, Royal Ruby, Harley-Davidson, Indian, Henderson." A poser certainly!

REVERTING to the policy of firms adhering hard and fast to a particular specification. I wonder if it is sheer inertia that dictates such arbitrary dealings, can it be that firms are too busy to depart from the catalogue, or does it so upset the mass production methods in vogue? Of course, a deviation from standard necessitating alterations to the general design of the machine would be ridiculous, but in this case it was the sidecar which the makers declined to modify to suit a prospective customer's desire.

ACCORDING to various correspondents, the finest prospect in Great Britain is to be found: in the Lincolnshire Wolds; from the shoulders of the mountain opposite Lock Katrine; in several places in Wales, many places in Scotland, or anywhere in the Lake District, in Dorset, and in Sussex. No two selections are alike. We are individualists indeed, and evidently there is no panorama standing head and shoulders above another for beauty and interest. One facetious reader says the finest prospect for him would be the windward side of a bullock being roasted whole and himself the baster and carver. I am not quite sure whether I am genuinely sorry for him or not; for him this observation infers either tragedy or else comic imagining—I am not sure which.

THE problem of weather protection is still taxing the skill of the designers, judging by the many types of hoods and screens now on the market. The latest attempted solution is embodied in the Quickover sidecar hood, manufactured by the firm of A. F. Camp, 95, Shaftesbury Road, Hammersmith.

In construction and design it is simplicity itself, yet is completely efficient. Out of action it resembles an ordinary sidecar hood, but when opened, the covering stretches in front of the sidecar dashboard, and with the side valances, which are made in one piece with the upper covering, completely encloses the passenger.

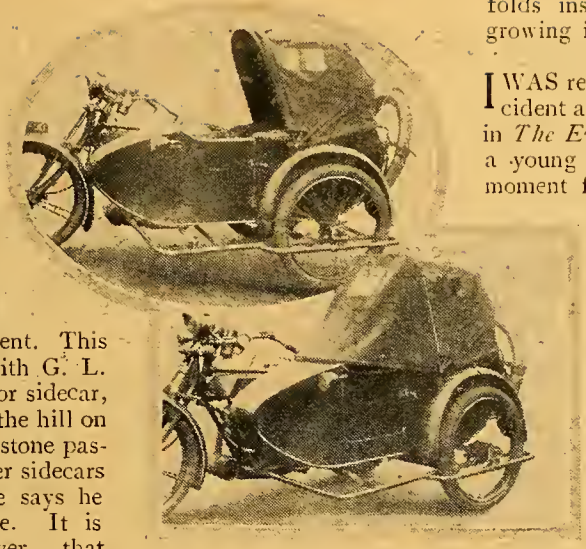
The contrivance may be raised or lowered from the driving seat of the outfit whilst on the move, one of the securing straps being fixed to the outside of the hood on the driver's side, and the other inside at the passenger's hand.

It may be fitted to practically any make of sidecar, because the width is adaptable, by the "springiness" of the frame, by at least six inches either way without interfering with the setting of the hood. In the "down" position it is supported by two strong nickel-plated brass brackets, and as there are two rear straps always in position, there is no danger of it lifting from the back.

The complete hood, though strongly made, is remarkably light, weighing only 12 lb., including the necessary brackets and other fixtures.

Passenger Machine Topics.—

DURING May last year a description appeared of a new Welsh hill which had been discovered by a member of *The Motor Cycle* staff. This road, named the Screw Hill, was the venue of an exploring party which set out to conquer it, and a formidable task it proved. Of all the sidecars only F. W. Giles on an A.J.S. succeeded in making a clean ascent. This honour must now be shared with G. L. White who, on a Brough-Superior sidecar, recently made a clean climb of the hill on a stock machine carrying a ten stone passenger. Not more than two other sidecars have ever got up. Mr. White says he had plenty of power to spare. It is not lack of power, however, that usually causes failures on such freak hills, but lack of wheel grip. But it requires more than ordinary riding ability to negotiate Screw Hill. A picture of the Brough-Superior on the hill was in last week's issue.

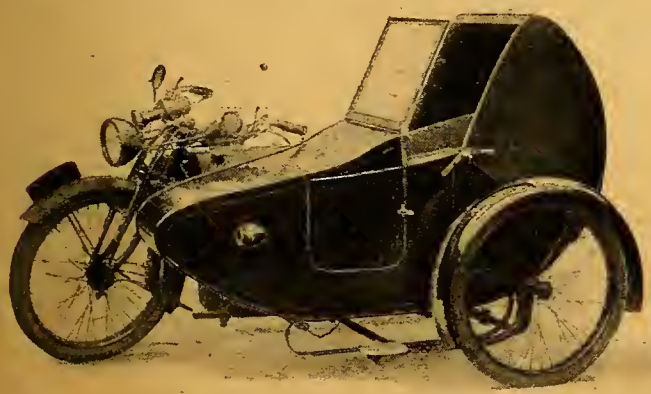


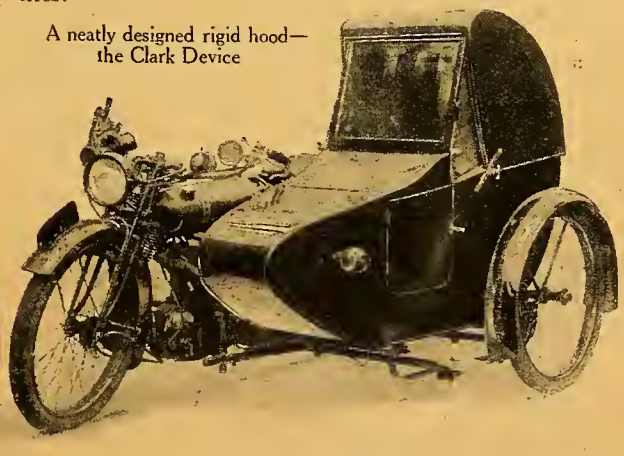
The "Quickover" combined hood and screen.

ANOTHER rigid hood is shortly to be placed on the market. This design, shown below, is patented by Mr. F. A. Clark, Handsworth Wood, Birmingham, and follows in principle several others which have been described in these pages. There is this difference, however. In the Clark design the frame of the rear portion of the body is let in half an inch, permitting the whole body to be of an even surface when the hood is down. Probably this method gives slightly more room in the locker than when the hood folds inside. There appears to be a growing interest in this type of hood.

I WAS reminded yesterday of a recent incident at Sotheby's related by "Quex" in *The Evening News*. He said he liked a young man he saw "who spared a moment from reading *The Motor Cycle* to pay £100 for David Garrick's copy of Ben Jonson." "Quex" might have spoken of the young man as sparing a moment to read *The Motor Cycle* whilst spending his £100. But that would have altered the subtle meaning. This incident was recalled by another young man whom I recently saw purchase for £20 a blue scale Worcester vase about nine inches high. He examined it lovingly, paid the dealer by cheque, then took it to the lady in the sidecar outside the dealer's shop. I asked if the young man was another dealer on his travels, but he was not. The shopkeeper said he was a keen private collector of old china, whom he knew quite well, and who must own a collection worth at least £500. Now the curious part follows. Besides being a keen china collector, the young man was a keen competitor in hill-climbs held by the club of a North Midland town. He could have owned a car, but drove a sidecar instead. Diverse pastimes—both excellent, however! But I have yet to meet the air pilot who collects butterflies.

A neatly designed rigid hood—the Clark Device





LOST—A SIDECAR WHEEL.

DURING a recent week-end some members of the Bristol M.C.C. were returning from Gloucester to Bristol, and a Zenith with a lightweight sidecar and a light passenger was going along at a good pace, when the sidecar wheel spindle broke. Fortunately, the road surface was smooth, the chassis slid without digging in, and no accident occurred.

The remarkable point is that the wheel has not been found. Quite a band of helpers searched the road and adjoining fields for half a mile on either side of the spot where it was presumed the wheel dropped off, and the owner, with some friends, returned next morning and searched in vain for two hours.

It is suggested that, in view of the speed and the light weight of the sidecar and passenger, the wheel was gone some time before its loss was realised, the heavy machine carrying the whole weight a considerable distance. The wheel is still missing.

About in Holland

A Land of Quaint Architecture, Quaint People and Quainter Costumes. Attractions for the Tourist.

By CHARLES G. HARPER.

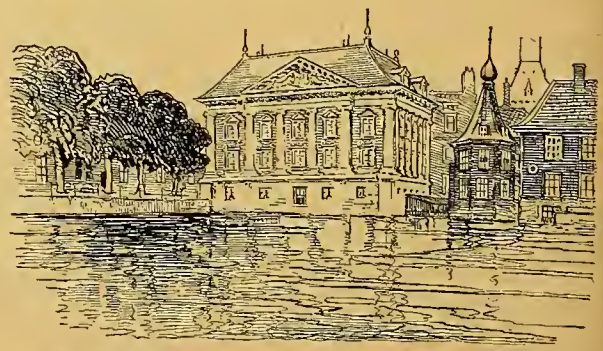
HOLLAND is but a little country : not much more than three hundred miles in a straight line will see you through the greatest length of it, from south to north; but it is a land of extreme interest. Not, it is true, the interest of picturesque scenery, for that scarcely exists, but the charm of a complete strangeness which is not so readily to be found to-day in most foreign countries.

In Holland you may easily be amused—in the French sense of that word—every day, for many days. For it is an old-world country, of many strange survivals.

Oddly enough, the Dutch people of the great towns, such as Amsterdam and Rotterdam, appear rather to resent this view of their land; and they have a strange disposition to deny that Dutch folk wear the quaint and curious costumes which undoubtedly they do wear. If it were not for the extraordinarily fantastic and beautiful architecture and the weird trousers and breeches of Volendam and Marken, and the singular clothes and outlandish headdresses of the women, for what, think you, would the tourist travel into the Netherlands? Not to see busy Rotterdam, another Liverpool. Not to visit the crowded streets—and unbelievably crowded they are—of Amsterdam, with their conventionally-clad citizens, in most respects like Londoners.

No, the Dutch idea that they are never quaint or odd, except as a stunt to please tourists, will not do at all. Have I not seen the women of Axel, whose ambition, and not a frustrated one either, is to be somewhat broader than they are long. Nature does not permit that, but it is achieved by the artifice of costume. Do not I know the women and girls of Friesland, with their real gold helmets? I have seen them on the Friesland roads, the sun glinting on their polished gold casques so that at a little distance you think you see a troop of dismounted Household cavalry.

Then there are the girls of Zeeland, who wear coifs with great white linen wings, like Sisters of Mercy, and under them have a golden blinker to each eye, like horses. And the women of Staphorst, who resemble unicorns. No, Sirs—I mean "Mijnheeren"—it won't do to say there are no strange costumes; nor, alternatively, to declare that, if any, they are worn to please and attract tourists.

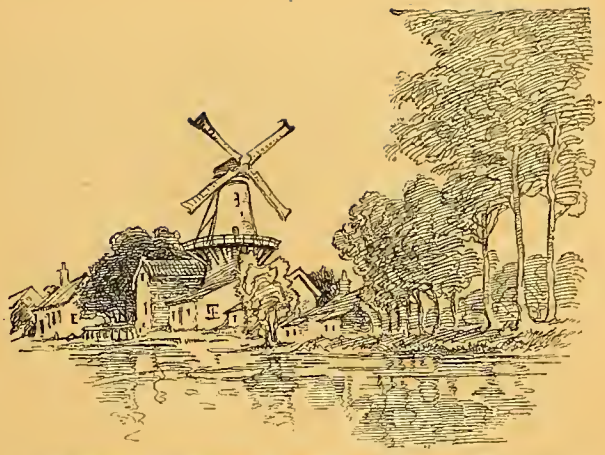


A famous and historical building, the Mauritishuis, The Hague.

Typical Dutch brick-paved road, with cyclists' path and canal.

The roads of Holland are good, bad, and indifferent. At their best they are very good indeed : the best being the brick roads. Providing you have a good foundation, a brick road, the bricks being set up on edge, cannot be bettered; but in a largely waterlogged country, such as this is, the road-bed is often uneven, and in places even foundrous. Of tarred or asphalte roads there are but few stretches; and those are round about that Court and Society capital of Holland, The Hague, which is a very polite and charming city, with,

One of the show places of Holland, the Street, Volendam.

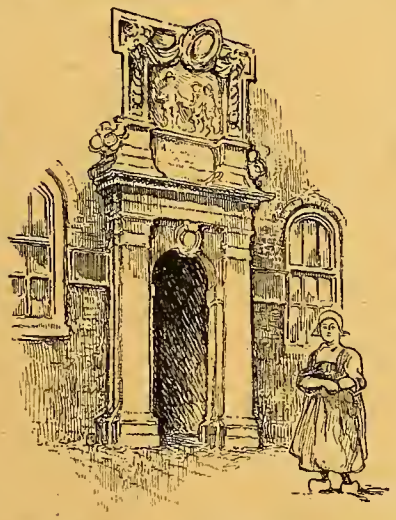


The subject of Rembrandt's masterpiece, "The Mill," Leyden.

on its northern side, the lovely English-looking woodlands of "the Bosche." The Hague has among its beautiful scenes that still lake in the middle of the city called "The Vyver," with the walls of the Mauritishuis rising sheer from the water.

The ten miles of road between Haarlem and Amsterdam are good, as to surface, but it is one of the most traffic-infested routes in the country.

Of macadam—the Dutch use the same word—there is a good deal, mostly bad. I have in mind a vile stretch of it, from Amsterdam almost into Monnickendam, beside the North Sea Canal; the stones of it all loose. A typical Dutch brick-paved road is like that pictured on the previous page. There are hundreds of spots like it; with a canal running parallel, wayside trees, a cyclists' path, "Rijwielpad," and the notice "Strijk," which is a command to sailing barges to strike their sails lest they frighten horses.

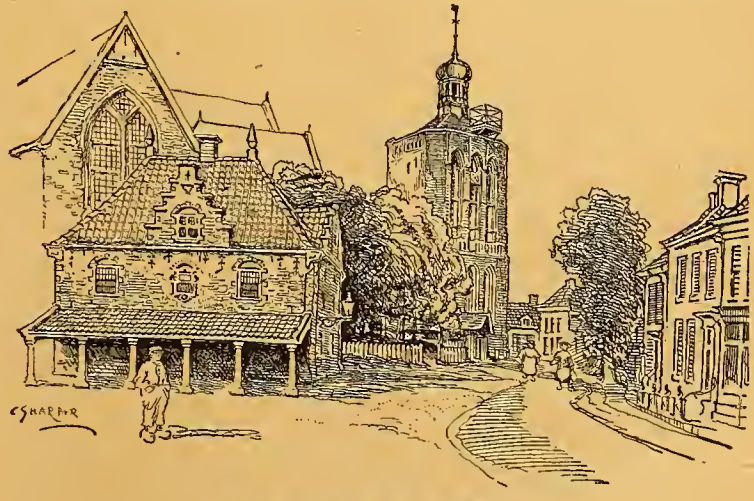


The Prinzenhof, Delft, where William the Silent was assassinated.

There is always a spire in a Dutch view, and generally a weird one. It is as though the Dutch, in that level, toast-and-water land of theirs, where the scenery is so tame, had, long centuries ago, made up their minds effectually to correct it by rearing up those rollicking fantasies. And if by some strange chance there is no tower or spire, there is inevitably a windmill. I counted up to two hundred windmills in one glance at Zaandam. I will swear to that, if necessary, but I hope you will take my word for it.

Between Rotterdam and Dordrecht is the very worst road I know of, as a main route, in Holland. Brick, it is true, but mostly foundered, and plentifully sand-strewn. The main traffic without exception goes by water, and it is not to be wondered at. Pas-

A gem of early architecture, the "House of the Grain-Porters," Franeker.



A town of "dignified repose," Workum.

About in Holland.—

sengers voyage, I believe, either by trekschuit or "paviljoen-pom." I should like to go by a "paviljoen-pom" once in a way. It sounds like the Pavilion at Brighton set to a double-bass obligato, but then things never turn out to be quite so good as you expect.

There is a mill outside Leyden traditionally said to be the birthplace of Rembrandt. Leyden is, of course, a University town. Incidentally, it is also the only place I know where apartments are offered to let in Latin: thus "*Cubicula Locanda.*" In the Nieuwe Keile at Delft lies the greatest man in the history of the Netherlands, "William the Silent," the father of his country, and liberator of it from the Spaniards. It was at the Prinzenhof he was assassinated by a Spanish agent.

Of course, one visits Volendam, on the Zuider Zee. That place and the island of Marken, close by, are the prime spots for odd costumes. The men of Marken wear breeches like balloons, while those of Volendam affect trousers like divided skirts. There was once an unfortunate traveller in trouser-stretchers who was advised by some wag that Volendam was the place for him to do good business in his specialities; but when he saw those sacks he committed suicide. They have no use for trouser-stretchers at Volendam.

Finally, I will add the advice: Go north to Friesland. There you find the most cleanly, charming towns, and the best and least-travelled roads. In such old, delightful places as Franeker and Workum, full of colour and of a dignified repose, that region is rich indeed.

THE MODERN GIRL AND THE MOTOR CYCLE.

A Defence of the Motor Cycling Sporting Girl.

By MAB. LOCKWOOD-TATHAM.

THE other day I saw a pretty girl with bobbed hair and the daintiest pair of breeched limbs standing beside her baby two-stroke in animated conversation with a group of admiring males, also with motor cycles of various descriptions.

At the moment she was the subject of conversation between several people near me, and I overheard the finishing remark, made in tones of scornful finality, "Oh, she's one of those girls who *would* ride a motor bike." This from a member of her own sex and obviously accepted by the man to whom she spoke.

I looked more closely at the girl, and saw a pair of merry blue eyes, tanned complexion, and capable, sensitive hands, and in spite of her workmanlike attire, femininity was written all over her.

An Unpleasant Characteristic.

There are thousands of people who would thoughtlessly or otherwise make a similar observation and think no more about it. It seems that the fact of a girl being the rider of a motor cycle immediately labels her as being "mannish"—admittedly an unpleasant characteristic—uninterested in frocks and frills, careless of home life, and devoid of any desire for woman friends. She is in the eyes of her adverse critics a sort of unsexed cumberer of the roads, whose speed appears excessive because of her female origin, and who possesses a desire for notoriety which overcomes any "natural" fear for her personal safety. I have even heard the old saying that "the female of the species is more deadly than the male" applied with great sincerity.

It occurs to me that the justice of this impression should be severely questioned.

The Hand that Wields the Spanner.

It is generally admitted that "the hand that rocks the cradle rules the world." Then why should not "the hand that rocks the cradle wield a spanner"?

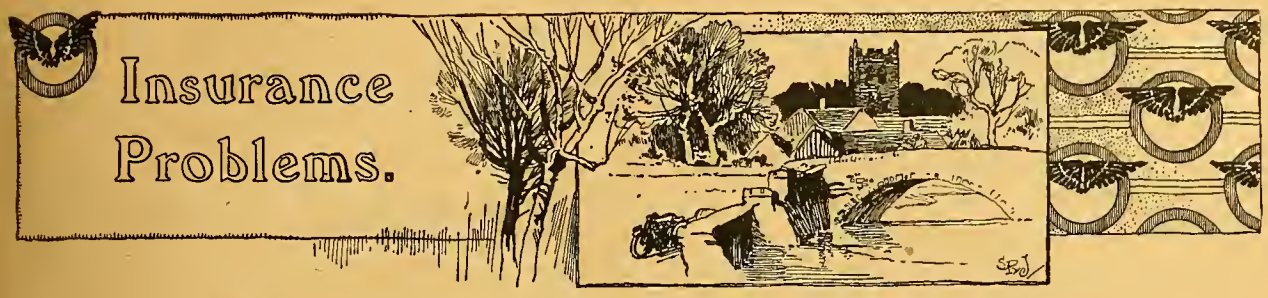
It takes an intelligent mind and clever fingers to minister to the wants of a motor cycle, and surely these are admirable feminine traits. It takes a strong and healthy young body to emulate Mrs. Janson or even tour about for pleasure over miles of sunny, picturesque country; it takes a cool head and steady nerves to negotiate traffic and deal with the emergencies of the highway. All of these are the qualities we want in our daughters, who are eventually to be wives and mothers.

It has never been considered masculine for a girl to ride a horse, yet in many ways it is much more dangerous and requires greater skill than driving a motor cycle—because over the former it is impossible to be certain of complete control. It has nerves and a mind of its own, and however well trained there is always the odd chance of panic or temper. When riding the latter only one mind and set of nerves is in evidence, which halves the risk in a tight corner.

Nobody thinks of it being unseemly for a woman to struggle with a refractory kitchen range or tinker with a broken mangle—yet how unnatural she is supposed to be if she knows the difference between a magneto and a carburetter or does her own tyre changing. Probably the mangle is much harder work in the end.

An Interesting Occupation.

The modern girl has a great deal of freedom and spare time which she can use at her own discretion. Walking is not exciting enough for her as an outdoor exercise, and it is not always possible to play tennis or golf in these days of overcrowded clubs and high fees, particularly in the suburbs of large towns. True, there is the ordinary bicycle, but it entails much energy and at the best a very restricted field. The net result of all this is very often packed cinemas and hotel lounges decorated with physically perfect young women smoking cigarettes and drinking the ubiquitous cocktail. Compare these tired-eyed and pale-faced damsels with what they might be under the influence of sun and fresh air and an interesting occupation, to say nothing of the benefit of having something to experiment on besides face creams and the opposite sex.



A Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Mysterious Damage.

Mr. A. Brascowe, Thorpe-on-the-Hill, writes: "A week ago, whilst riding in the country, I accidentally collided with a telegraph post, which prevented the machine starting. The wheel was not buckled nor was the damage apparent, but the engine would not start after the impact. I paid £1 to a farmer to tow me to the nearest town. There I found that the collision had done something to the magneto, which the mechanic put right for 2s. 6d. I have only motor cycled for about a month, and am sixty years old, so you can forgive my ignorance. The company, however, refuses to pay the £1 I paid for towing in the machine. Yet I am fully covered against accidental damage. Is it justified in refusing payment?"

Without knowing what repair was effected by the mechanic, it would appear in this case that the insurance company's opinion was that your magneto only needed some small adjustment, which was probably not actually necessitated by the slight collision with the telegraph post, but might have happened at any time even without the collision.

* * * *

Insurance of Miniatures.

H. F. Winters writes: "I am informed that a McKenzie lightweight has to be covered as a motor cycle at a premium of £4 10s. per annum. I have been told that there is a special rate for 'mechanically assisted pedal cycles,' and thought this machine would be classed as such, but the firm in question states that as the engine is fixed in the frame, and not an 'attachment,' this special rate does not apply to the McKenzie. It seems hardly fair that such a machine, costing only 26 guineas, should be charged the same premium as a 350 c.c. motor cycle up to £100 value, and I shall be glad if you can advise me whether this ruling is correct, or whether it is possible to obtain an insurance as a 'mechanically assisted pedal cycle,' for which I believe the premium is only £2 5s."

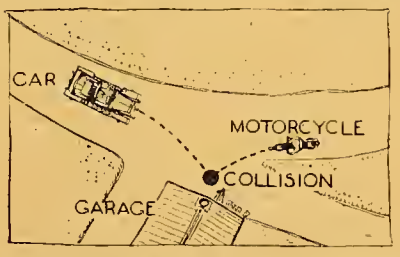
Upon making inquiries, it appears that all the principal insurance offices charge motor cycle premiums for the insurance of these lightweight machines. There is certainly a considerable difference between the premium for a mechanically assisted pedal cycle and that charged for a lightweight machine, but this is no doubt due to the difference in the cost of claims experienced by the companies. It certainly is not fair, and no doubt a revision in the rate will be made as this type of machine becomes more popular.

* * * *

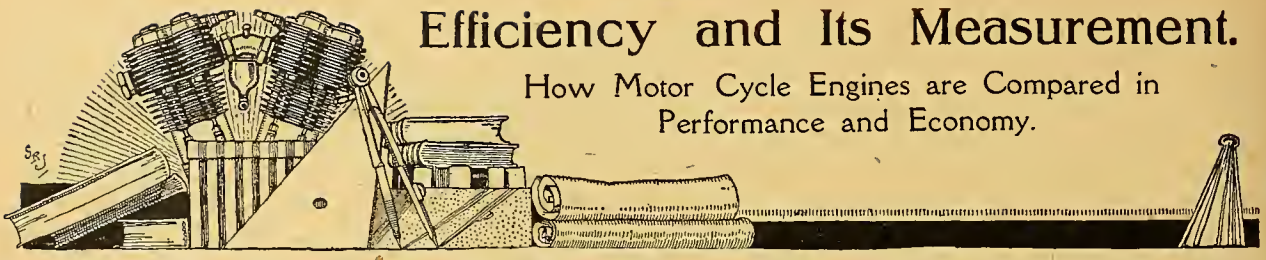
An Uninsured Motor Cyclist.

A reader in Retford says: "Having unfortunately been in a collision which resulted in my motor cycle being very much damaged, I have been notified that I shall be held responsible for damage to the other vehicle, a car.

Unfortunately I am not insured, whilst the car owner is, and the notice has come from his insurance company. I should, therefore, be pleased to have your opinion as to who was to blame in the following circumstances. I was travelling on the main road and gave audible warning to an approaching car, and signalled my intention to turn to the left. I turned quickly, but the car came on to me and collided eight feet from the wall on my left. The car is damaged but able to drive away. The car occupants say they signalled their intention of leaving the main road to take a secondary road, but I did not see it. After the motor cycle reached the ground it was pushed six feet and finished up four feet from the wall. There was no other traffic about at the time, and I was pulling up to have some minor repair done to my machine within four yards of the accident."



The circumstances of this accident make it somewhat difficult to give definite information as to who is responsible; but it certainly appears that the car driver was at fault in cutting on to his wrong side. From your diagram it is evident you had the right of way, and were quite in order to cross as you did to the garage.



Efficiency and Its Measurement.

How Motor Cycle Engines are Compared in Performance and Economy.

SEVERAL points of view may be considered in relation to the efficiency of a motor cycle engine, and the term "efficiency" unqualified by any further description may consequently have several meanings.

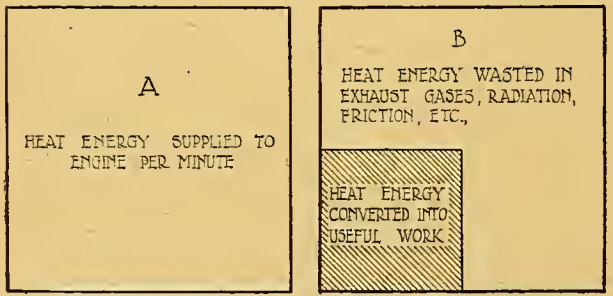
For instance, a comparison may be made between the total available power put into the engine in the form of fuel, and the useful power which the engine develops at its crankshaft. Before their respective magnitudes can be compared both the input and output must be reduced to some commonsense measure, and, as will be seen later, both these quantities can be measured in units of heat, and in consequence their ratio is termed the thermal efficiency.

Or again, the relation between the power developed in the engine cylinder and the power actually available at the crankshaft may be considered, in which case it is the mechanical efficiency with which we are dealing.

A third efficiency is termed the volumetric, and is measured by the ratio between the volume of explosive mixture which is actually available for conversion into work in the engine cylinder and the maximum theoretical volume which *should* be available under ideally perfect conditions.

Measure of Thermal Efficiency.

The "Thermal Efficiency," as already stated, is the ratio between two quantities of heat, and the unit of measurement usually adopted in this country is the



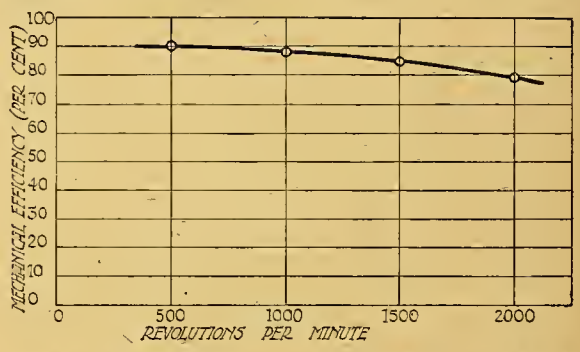
A
HEAT ENERGY SUPPLIED TO ENGINE PER MINUTE
B
HEAT ENERGY WASTED IN EXHAUST GASES, RADIATION, FRICTION, ETC.,
HEAT ENERGY CONVERTED INTO USEFUL WORK

Thermal efficiency diagram for a four-stroke engine.

"British Thermal Unit" (B.Th.U.), which is defined as being the quantity of heat required to raise the temperature of one pound of water from 60 to 61 degrees on the Fahrenheit scale. A can of petrol, a lump of coal, a match or any combustible substance, contains a certain number of these heat units stored up ready for use, or, in scientific language, they all possess certain definite calorific values. In the case of petrol, an average figure per pound of spirit is 18,700 B.Th.U., or, in other words, a pound of petrol (roughly one-eighth of a gallon) when burnt under suitable conditions would raise the temperature of 18,700 pounds of water (or nearly 2,000 gallons) from 60 to 61 degrees Fahrenheit.

If the quantity of petrol supplied to an engine during a bench test is carefully measured, it is possible, therefore, to form an accurate idea of the number of heat units supplied during the run.

In addition the power output of the engine is capable of measurement by absorbing it with a specially constructed "brake." In a simple form of brake a



Curve showing relation between mechanical efficiency and R.P.M.

known weight is applied to the outside flywheel or pulley, on the engine crankshaft, by means of an encircling band or rope, and the revolutions per minute are obtained by an ordinary counter or a revolution-indicator.

Relationship of Work and Heat.

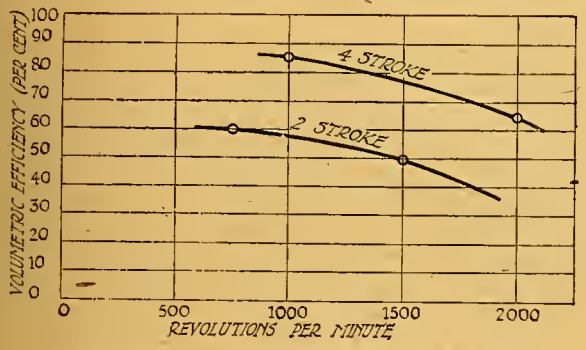
This provides the necessary data for calculating the brake horse-power (b.h.p.) developed by the engine.

Now it is a well-known principle of science that heat and work are mutually interchangeable, and, in fact, this interchange occurs in every piece of moving machinery. Heat is put into a motor cycle engine in the form of petrol, or other fuel, and becomes converted into work, which is given out at the engine crankshaft, but work, on the other hand, is reconvertible back to heat. A simple example of this occurs whenever work is expended in overcoming friction, a portion of the work becomes changed into heat and the frictional surfaces get hot. Furthermore, any definite quantity of work is equivalent to a definite number of heat units, and it has been found experimentally that one horse-power acting for one minute is equivalent to 42.4 B.Th.U., or, if one horse-power could be applied to 42.4 pounds of water in such a way that it was entirely converted into heat energy, the temperature of the water would be raised from 60 to 61 degrees in one minute.

Efficiency and its Measurement—

It will thus be seen that both the input and the output of the engine can be represented in units of heat, and can therefore be compared on a common basis.

From a large number of experimental results it has been found that the thermal efficiency of a standard type four-stroke engine, under the best possible conditions, will rarely exceed 25 per cent., while the average value for a two-stroke engine is rather lower.



Relation between volumetric efficiency and r.p.m.

This implies that of the total heat energy which is put into the engine, at the best only about one quarter is given out again in the form of useful work at the crankshaft. The remaining three-quarters are partly lost in the exhaust-gases, partly transferred to the cylinder, and thence radiated into the atmosphere, and partly employed in overcoming the friction of the working parts of the engine, etc.

Internal Losses.

In the four-stroke engine, in addition to overcoming the friction between piston-rings and cylinder, work is used up in lifting the valves and driving the valve-gear, and a two-stroke engine has a point of advantage in that no work is wasted in operating valve mechanism, but this is more than counteracted by the fact that in the usual crank-case-compression type work has to be expended in pumping the charge through the transfer ports and passages.

Owing to the frictional losses, the b.h.p. is always less than the power actually produced in the combustion-space of the engine cylinder. The latter is termed the "Indicated Horse Power" (I.H.P.), and is capable of accurate measurement by means of an instrument known as an indicator, while the ratio of b.h.p. to I.H.P. gives the value of the mechanical efficiency of the engine.

In a well-designed four-stroke engine, this efficiency may reach as high a figure as 90 per cent., so that of the total power developed only one-tenth is absorbed in overcoming the friction of the power-unit itself. The mechanical efficiency of a two-stroke engine is usually less, owing to the work used up in pumping the charge from the crank case to the combustion space, and may even drop to a figure as low as 70 per cent.

In both types the resistance to motion increases as the engine revolutions increase and the mechanical efficiencies decrease to a corresponding extent.

Volumetric (or Pumping) Efficiency.

A further source of loss in a motor cycle engine arises from the fact that it is impossible to charge the cylinder with its maximum theoretical quantity of explosive mixture. There is a loss due to friction between the moving gases and the interior surface of the induction pipe, and any acute bends in the latter will hinder the flow still further, while there is another loss at the valve pockets in a four-stroke engine, and at the various ports in a two-stroke.

Experiments show that in a four-stroke engine it is possible to obtain a volumetric efficiency as high as 85 per cent., or, in other words, the quantity of mixture which actually reaches the cylinder is 85 per cent. of the maximum theoretical quantity. This efficiency also falls off as the engine speed increases, frequently dropping to 65 per cent. A two-stroke engine shows up badly by comparison, as far as volumetric efficiency is concerned, about the highest average value at slow engine speeds being 60 per cent., which may decrease to 50 per cent. as the engine revolutions increase.

The efficiency of the modern motor cycle engine, whether considered from the thermal, mechanical, or volumetric point of view, compares very favourably with that of other sources of motive power, and although a thermal efficiency of 25 per cent. appears very low, it should be remembered that the percentage of heat which can be converted into work by any engine, either of the four-stroke or two-stroke type, is limited by rigid scientific facts which no perfection of design or workmanship can overcome, and in the best engines of both types it has been found that the thermal efficiencies obtained in practice fall very little short of the maximum possible efficiencies which an ideally perfect engine would yield when working under ideally perfect conditions.

B. G. MANTON (B.Sc., A.M.I.C.E.).

SOLDERING FOR AMATEURS.

THE making of a perfect joint between a coned petrol or oil union and a copper pipe is quite a tricky piece of soldering, as the nipple is usually a very close fit on the pipe, so that there is very little room to run the solder down; and yet the joint will soon come adrift under vibration unless its full area is soldered. The raw beginner must beware of covering his brass nipple with waste solder; a paste of whiting and water will prevent solder from sticking to any part where it is not wanted. A blowpipe is of great assistance in this sort of job. The end of the pipe abuts against a shoulder inside the union. Grip the union in the vice so that the pipe is entered from the top. Run a very little solder in at the top of the joint in the ordinary way.

Then use the blowpipe to heat the whole joint, applying more flux, and the solder will run down to the shoulder inside the union. More solder can then be applied at the top of the nipple and run down in the same way until the entire joint is fully soldered.

ROAD RIDER.

SPEEDING-UP SPEED TRIALS.

Comments on an Efficiently Organised Speed Meeting. Its Appeal to the General Public.

Outlining every path and the edge of the cliff, less than half of the spectators at the recent Scarborough speed trials are included in this picture. Such a crowd shows that motor cycle events have a public appeal which only needs fostering by proper facilities and organisation.

MORE than once we have criticised the average motor cycle speed trials for their dullness and long drawn out boredom which affects all but the actual competitors.

It had become a paradoxical truism to say that speed trials were the slowest events it was possible to witness.

When, therefore, speed trials are carried out so efficiently as to earn the general praise of thousands of spectators, and when every phase of the organisation works efficiently and well, it is only becoming that praise should be bestowed as it is deserved.

A Model Example.

It is more than pleasant, therefore, to accord such praise to the organisers of the recent Scarborough speed trials, which were reported in our last issue; there was no excuse there for that frequent grumble of boredom from the spectators which so often arises where the same riders appear in a multiplicity of classes and monotonously run down the course in each.

The Scarborough club avoided this by allowing each competitor two runs only, no matter in how many classes he was entered, and thus the large entry was efficiently handled in a short time. In each case the better time of the two runs was counted.

The course was roughly semi-circular, with a moderately sharp bend near the start, and at about the half distance there was quite an appreciable hill with a corresponding descent. Apart from a rather bad bump at the summit of the rise the tar-macadam roadway had an excellent surface, and a broad white line up the centre provided a guide to the riders.

Separate Return Route.

Roped off from the roadway, the wide footpath provided an excellent return route for the competitors. Electrical timing, operated by stretched tapes at start and finish, was used, and the whole entry of 131 (including cars) was disposed of in about four and a quarter hours.

By so running the event the interest of the vast assembly of 10,000 spectators who viewed the sport from roped enclosures and cliff pathways (thus having an uninterrupted and uninterrupting view), was maintained throughout.

It must be recollected that the value of an event such as this lies largely in the appeal it makes to the general public, members of which attend as curious sightseers and go away with a better knowledge of the safety and controllability of the motor cycle at even the highest speeds. To draw out the proceedings to an undue length leaves nothing but a recollection of boredom in the mind of the lay spectator. This phase of the matter is the best answer to those competitors who grumbled at only having two runs, while, curiously enough, the majority only equalled, or did not even attain, their previous speed on the second attempt.

SPEED TRIALS RESULTS.

The special cups and awards in the Scarborough and district speed trials are now announced and are as follows:—

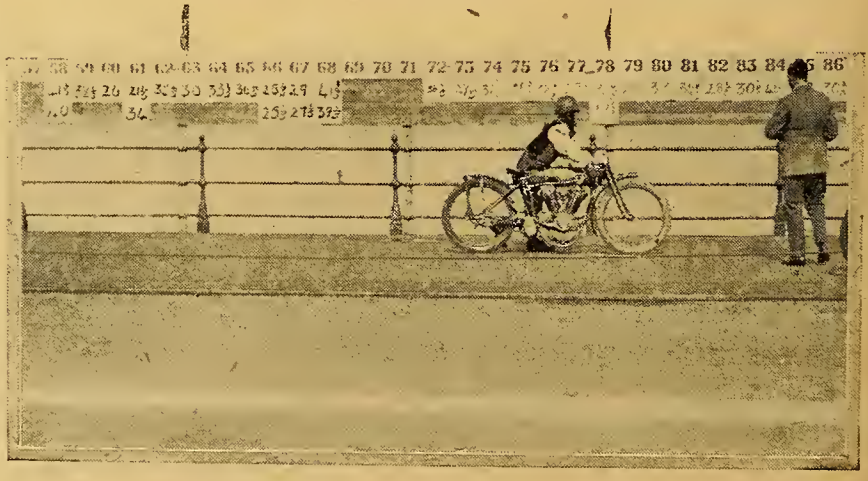
Craig Cup (fastest time by a Yorkshire amateur).
W. H. Rhodes (998 Indian), 26s.

Webster Challenge Trophy (fastest 350 c.c. machine).
G. Dance (349 Sunbeam), 25⅕s.

Carnival Cup (fastest time of the day).
F. W. Dixon (989 Harley-Davidson), 22⅖s.

Vice-President's Cup (fastest sidecar).
F. W. Dixon (989 Harley-Davidson sc.), 26⅖s.

Ladies' Prize.
Miss S. Taylor (492 Sunbeam), 30⅕s.



The effective scoreboard at Scarborough. Each time was posted immediately; while returning competitors passed back along the footway to the start without impeding those still running. Incidentally the rider shown is F. W. Dixon, the well-known Northern speed wizard.

MEASURING NOISE.

Low Audiometer used by A.C.U. in defence of Bromley prosecution. Sidelights on the Police attitude.

IN view of the present unsatisfactory state of the law as affecting the silencing of motor cycles, considerable interest attached to a case heard at Bromley (Kent) Petty Sessions on Monday of last week. Stanley Pounds Vine, a member of the A.C.U., was summoned under the Motor Cars Act (1903) for riding a 293 c.c. Connaught motor cycle with an inefficient silencer, and the Union undertook the defence, Mr. W. G. Weller, solicitor, acting on its behalf.

The outstanding feature was the production for the defence of photographic records made by Prof. A. M. Low's Audiometer. This instrument actually photographs sound, and enables reliable comparisons to be made between different noises. In this instance Audiometer records of the exhaust sound of the defendant's motor cycle were put in, together with those of another normal motor cycle and of a motor cycle with an unsilenced exhaust.

Explaining Police Activity.

Mr. Horace Fenton, prosecuting for the Commission of Police, said that the police authorities considered that the time had now arrived to give more effect to the Silencing Order made under the Motor Cars Act and extended to motor cycles in 1912. By this means it was proposed to deal with the intolerable noise which the public had to endure from certain motor cycles.

P.C. Hales 659P gave evidence that on July 8th he was on special duty on the Croydon road, Keston, in association with P.C. Ovenden 232P. He had particular instructions to deal with motor cyclists whose machines were making an offensive noise. On a signal from P.C. Ovenden he stopped the defendant.

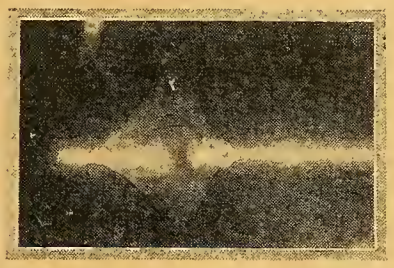
In answer to Mr. Weller, Hales said he would have stopped the defendant in any event even had he not received a signal from the other constable, as Mr. Vine's machine was making a loud noise similar to that of a Lewis gun.

The witness admitted that he did not know much about the mechanical features of a motor cycle and had no particular knowledge of the Connaught machine. He had, however, in common with other officers who were put on this particular duty, received a course of instruction regarding silencers at Scotland Yard.

Grass as a Testing Medium.

Questioned by Mr. Weller, witness said he could not dispute that the silencer and exhaust pipes on the defendant's motor cycle allowed an expansion of approximately five times the engine capacity. He had been instructed that expansion and cooling of the exhaust gases were necessary in order to avoid undue noise, and he agreed that if the Connaught exhaust system allowed an expansion of approximately five times the engine volume it should be efficient. Witness had read reports of trials conducted by the A.C.U., and he was aware that the Union considered that an expansion chamber of sufficient capacity could be an effective silencer without containing baffle plates. He agreed that he pushed a piece of grass into the silencer of defendant's machine to ascertain if it contained baffle plates. He admitted that this would not be an effective way of ascertaining this. Witness proceeded to say that he also used a piece of wire for this purpose.

Mr. Fenton interposed that officers on this duty had instruments for this purpose, and produced a bundle of wire rods.



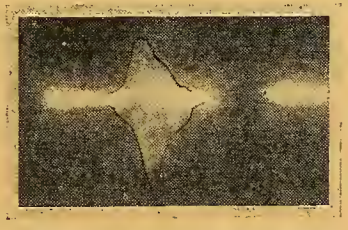
Sound wave of a 490 c.c. motor cycle fitted with a straight through 4-foot exhaust pipe.

Mr. Weller (to witness): "Are you served out with these wires or do you provide them yourselves?"

Witness: "We provide them."

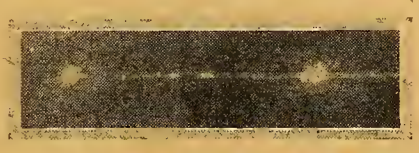
Mr. Weller: "In your zeal to find baffle plates, I suppose?"

Witness: "Yes, sir." (Laughter.)



Sound wave of the same machine as above, but with a fish-tail end on the pipe. This was given by the defence as an example of reasonable silence.

Witness continued that if he had found that the silencer had contained baffle plates he would still have prosecuted the defendant. He admitted that there was nothing in the Order under which defendant was summoned about baffle plates. Witness agreed with Mr. Weller that the fitting of which he complained was the standard silencer as fitted to Connaught machines.



Similar reading of the Connaught lightweight that was alleged to be unduly noisy.

P.C. Ovenden supported this evidence.

Joseph Elliott, Sub-Divisional Inspector, Scotland Yard, in charge of the Carriage Inspection Department, corroborated that P.C. Hales and other officers had received a course of instruction on their duties regarding silencers from himself and other Scotland Yard officers. Witness considered the silencer on defendant's motor cycle ineffective because the expansion chamber, set transversely to the engine, was pierced at each end with a number of holes through which, he suggested, the exhaust gases passed instead of going through the extension pipe.

Cyril John Cuffe, A.C.U. engineer, stated that on this prosecution being reported special arrangements were made in conjunction with Prof. Low to test the noise made by defendant's motor cycle. He was present when test runs were made in St. James's Square for the purpose of taking Audiometer records.

Details of Offending Silencer.

He had examined the silencer, and had found that it allowed ample expansion and cooling of the exhaust to ensure reasonable quietness. The volume of the expansion box was 984.23 c.c., of the exhaust pipe 281.21 c.c., and of the outlet pipe 180.78 c.c. This constituted a total volume of the exhaust system of 1446.22 c.c., or practically five times the volume swept out by the engine, which was 293 c.c. On defendant's machine the exhaust gases were led from the cylinder by a pipe to the expansion box, which had 40 $\frac{1}{8}$ in. holes at one end, and 37 similar holes at the other end. There was also a tail pipe from the expansion chamber which was flattened at the outlet end to an opening five-eighths of an inch wide.

The witness disagreed with Inspector Elliott and other witnesses for the prosecution that the holes in the expansion chamber were the cause of excessive noise; in fact, these holes assisted the cooling of the gas, and on this particular machine could be considered an advantage. He had tested many motor cycles, and he was emphatically of opinion that the exhaust noise of the Connaught was in no way excessive.

How the Audiometer Works.

Dudley Russell Cook, representing the Low Engineering Co., said that he had tested the noise with Professor Low's Audiometer. On the invitation of the Magistrates, witness carried the machine into Court and erected it on the witness box, proceeding to explain its working. Sound entering the funnel of the instrument, he said, strikes against a sensitive diaphragm to which is attached a small mirror. Light from an electric lamp is focussed on the mirror and is reflected back to a moving photographic film wound through the closed end of the camera. The diaphragm vibrates to all sounds, and the vibrations move the

Measuring Noise.—
mirror, as the mirror moves, the light it reflects oscillates, and oscillations are recorded by the film. Thus the greater the sound the greater the movement of the mirror, and the greater the movement of the light on the film. The film when developed gives a perfectly clear photograph in a line of light of the sound variations.

Such photographs of the noises made by defendant's motor cycle were handed to the Bench with the noise photographs of another normal motor cycle and of an unsilenced machine, for comparative purposes. Mr. Cook said that he certainly considered the Audiometer readings much more reliable evidence of sound for definite comparative purposes than could be the impressions of the human ear. It had been demonstrated, he said, that the hearing of different people varied very considerably, and also that the hearing of one person varied under different conditions.

Oscar Ernest Seyd, motoring journalist, gave evidence that he was present at the tests of the defendant's motor cycle.

The A.C.U. Object.

Questioned by Mr. Fenton, witness stated that he considered the design of the exhaust system on the defendant's machine silenced the discharging gases as far as was reasonably practicable. He had to agree that an exhaust system could be evolved for this engine which would make it more silent. He did not think, however, such a system would be practicable on account of its size if the engine were to be used as the power unit of a motor cycle.

At the conclusion of the evidence Mr. Weller addressed the Bench on the reasons which inspired the A.C.U. to defend the case. It would have been much easier to have advised the defendant to send the Bench a 10s. note with a polite request to them to return any change. The Union, however, took a more serious view of this matter and, in common with many magistrates and police authorities throughout the country, realised how unsatisfactory was the present state of the law as relating to silencing. The A.C.U. had done everything possible to discourage excessive noise.

A Mistaken View.

When, however, the Union felt that its members were not fairly dealt with in this respect it naturally arose in their defence, and it was the general opinion that the time had now arrived when a more satisfactory definition of silencing requirements should be evolved. Whichever way the present case went he would respectfully inform the Bench that much more would be heard of this matter, and he was confident that when Parliament reassembled the chief Legislature of the country would be asked to give attention to this vital subject. He submitted that a mistaken view of the present silencing regulations was often taken by police authorities. The A.C.U. realised the difficulty of magistrates who were confronted with the evidence of police officers that a motor cycle was excessively noisy when no evidence was put before them to the contrary. On this occasion, however, he had been able to submit a mass of evidence which, he ventured to think, was overwhelmingly strong as against the personal opinion of the two police officers concerned. He felt sure that the Bench would realise that such a scientific method of determining noise and enabling comparisons between various noises to be made must be standardised in the near future. At present there was no standard as to what was a normal exhaust sound and what was an excessive noise. Once that was established such evidence as that of the Audiometer would surely be definite and incontestable.

He would remind the Bench that the constables concerned were out to catch as many motor cycles as possible. That was the particular duty on which they were engaged, and one could well imagine them in their zeal sometimes developing a very acute sense of hearing. As against this he asked the Bench to give due weight to the mechanical evidence which had been produced.

It was well known that the police were now modifying their views regarding the employment of baffle plates, and although the police officers in this case resorted to the primitive course of pushing things into the silencer, they did not base their case upon the erroneous idea that baffle plates were required by law, or were scientifically essential.

The Bench retired to consider the case and were absent from Court some twenty-five minutes.

Bench Interested.

On their return, the Chairman said that very interesting evidence had been produced by the defence, and every point submitted had been carefully considered by the Bench. The helpfulness of the evidence for the defence was much reduced, however, by the fact of the absence of a standard of noise, as against which they had the police evidence that the defendant's motor cycle was excessively noisy. In respect of the Audiometer readings, the defence had been unfortunate in comparing the defendant's machine with a motor cycle which the Bench considered a generally noisy one*. They therefore found that the exhaust noises of the defendant's motor cycle had not been reduced so far as was reasonably practicable, and they imposed a fine of 10s.

Mr. Fenton applied for costs on behalf of the police, but this the Bench declined to grant.

* The other test machine was a four-stroke single with a fish-tailed long exhaust pipe.

VARIABLE PULLEY COUNTERSHAFT GEARING.

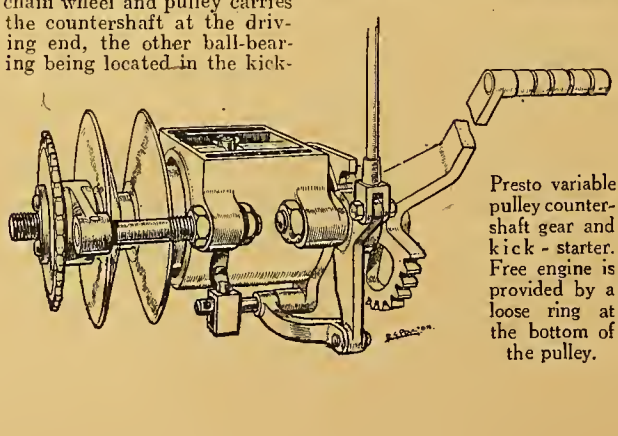
An Infinitely Variable Gear with Free-Engine and Kick-starter for Low- and Medium-Powered Machines.

WITH the object of providing an easily adapted variable gear transmission, especially for single-geared lightweights, the Presto Co., of 26, Cross Street, Hatton Garden, London, E.C.1, has introduced the Presto Multi-Gear Box.

Working on the expanding pulley principle the gear consists of a few parts and has nothing of a flimsy nature in its construction. It consists of a box, which is clamped to the bottom bracket of the frame, and in the box are cam slots wherein engage two pegs on a cylindrical thrust block. Through the centre of the box passes a shaft, driven by chain from the engine, and carrying fixed and sliding pulley flanges. The inner flange is the sliding one, and its movement is controlled by the thrust block operating through a thrust race. In its extreme position the moving flange opens so as to allow the belt to fall on to a loose ring at the bottom of the pulley.

Control is effected by a long lever fixed on the saddle tube, its location in any position being maintained by a friction device on the thrust block rocking mechanism on the box.

An "outrigger" bearing between the chain wheel and pulley carries the countershaft at the driving end, the other ball-bearing being located in the kick-starter end of the box. The starter is of the quadrant and ratchet-pinion type.



Presto variable pulley countershaft gear and kick-starter. Free engine is provided by a loose ring at the bottom of the pulley.

In actual use on a two-stroke machine we found the gear to be very effective and easily controlled, and although there is no provision made for taking up the slack of the belt on the low ratios, the absence of slip was remarkable; even on hills it was always possible to stop the engine by powerful braking without a trace of transmission slip.

The present price of the Presto gear, with flywheel sprocket, chain and adapter for any type of bottom bracket, is £7 7s. Belt and chain lines are widely adjustable.

DISPARITIES IN FUEL CONSUMPTION.

Sir,—I was interested in Mr. A. D. Harper's remarks about his 1920 Triumph, which has completed 19,500 miles and won a first prize in a petrol consumption test at 127 miles per gallon.

Having bought a chain-driven Triumph, I went on a 400-mile tour last week; I thought I was doing very well by getting 70 miles per gallon. A. T. GEORGE.

CANCELLATION OF CLUB EVENTS.

Sir,—Your correspondent, "Fed Up," is obviously very unhappy at the lack of support given by his club members in trials. Like him, I have spent many precious hours nailing up Dunlop arrows (not to mention taking them down after dark!) and sprinkling blue powder on roads, buoyed up with hopes of fine weather and a good entry. These hopes, particularly the latter, have not always been realised, but instead of saying to myself, "We ought to have cancelled it," my probing mind inquires why the entry was so small. The course may have been too long or too short, too easy or too difficult, or the organisation of the previous trial may have left a bad impression. The cause of a small entry in a recent trial of my club was found to be due to a slight increase in the entry fee, and on a previous occasion it was ascertained that the starting and finishing points were too far from the district in which most of the competitors resided.

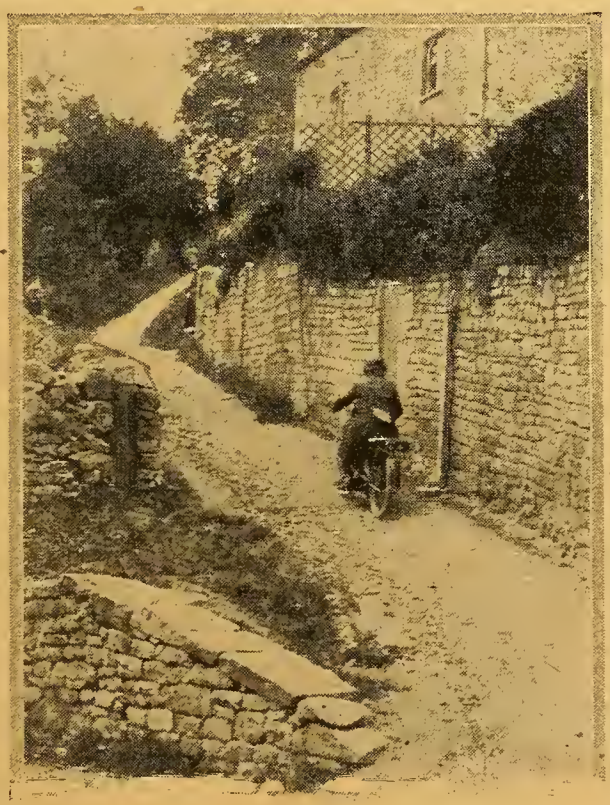
I would therefore advise "Fed Up" to take heart, and to devote a little time to finding out why only seven of his members competed. If a trial or any other event is run at the right time, and on the lines best suited to the club in question, the necessity of cancellation should never arise.

His remarks anent consideration of club members for their officials are, in the main, unfortunately correct. Perchance he will find consolation in the fact that he is not the only one entitled to indulge in a little grousing on that score.

Finally, "Fed Up" apparently slightly misunderstands Mr. E. C. Gordon, to whose letter his wail was a reply. I happen to know Mr. Gordon for a reasoning sportsman and a busy man, and believe that the eleventh-hour cancellation of the South Midland Centre Gymkhana was his chief bone of contention. My club, blameless and helpless in the matter, failed to secure at least two new members owing to this cancellation; had it been a club affair we should probably have lost some present members in addition.

Cheer up, "Fed Up," and never think of cancelling an event if you have the future welfare of your club at heart.

ALAN W. DAY.



NON-SKIDDING LIGHTWEIGHTS. Bussage Hill, in the Cotswolds, is one of the type that none can be sure of ascending non-stop; it is slippery, uneven and steep. It was included in the Western Centre Team Trial, described last week, when the Cotton rider shown, and indeed all three riders of that make, proved that the low centre of gravity of the Cotton's triangulated frame was a most useful asset.

GOGGLES FOR THE SPECTACLED RIDER.

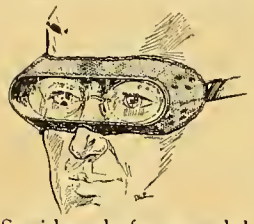
Sir,—I would like to point out to "Awakawakawoo" that the correct manner in which to obtain the necessary glasses or goggles is to consult one of the many properly qualified sight-testing opticians in the country holding the Diploma of the British Optical Association; then he will be assured of being given glasses which are suitable for his needs. A working optician should only work from a prescription, in the same manner that a chemist dispenses a medical prescription.

I would like, also, to point out, not only as a qualified optician but also as a rider for over fifteen years, that the trouble caused by goggles to riders with normal vision is not only due to cheap and faulty lenses but, where the glasses have been ground perfectly plain, a sense of altered perspective may cause distress, which I attribute to the glasses being too small, and with flat surfaces. In the writer's experience, even when lenses have been made most carefully there has still been a sense of altered height, and also distance, which is probably due to some nerve affection from normal, due to the refractive index of the glass used.

Thus the writer is always very chary in advising the use of goggles, but if they have to be used then they should be made from a proper prescription, with large lenses, and preferably a large curve on the inside; the most useful glass is Crookes A.

FREEMAN LEE, D.B.O.A.

Sir,—I enclose a rough sketch of a suggested form of goggle which might prove extremely useful to those of us who have to wear spectacles when motoring. I have tried most makes of goggle on the market, and have found that some, although giving reasonable protection to the eyes, are prevented from fitting flush with the face by reason of the fact that the spectacles project a matter of one inch or so from the face, with the result that particles of dust, etc., can penetrate inside the goggle, flies being particularly objectionable in view of the fact that they get between the eyes and the spectacles and are unable to find any way out.



Special goggle for spectacled riders, suggested by Mr. F. A. Ellis.

It seems to me that the suggested goggle could be quite easily made with a one-piece glass and wire distance pieces with the usual type of woolly frame mounted on a pliable wire, so that it could be moulded to the shape of the nose, etc.

A fairly wide strap should be used, because the usual narrow elastic band has a tendency to cut the top of the ear.

F. A. ELLIS.

ANOMALIES IN DISEMBARKATION CHARGES.

Sir,—I brought back from West Africa with me last November two B.S.A. motor cycles and sidecars for overhaul. I have since received a bill from the Mersey Docks and Harbour Board for dues amounting to £1 for discharging these at the landing stage and placing them in the Customs examination shed (I had to pay the porterage). I have contested this charge, as I consider it unreasonable and exorbitant, and I now find that passengers arriving from abroad are discriminated against, as is shown by the following tariff :—

Motor cycles and sidecars landed or loaded at Liverpool (whether at the docks or stages) are liable to dock rates and town dues, foreign or coastwise, as under :

Inwards (foreign)	10s. each outfit	
Outwards (foreign)	5s.	,,
Inwards (coastwise)	2s. 6d.	,,
Outwards (coastwise)... ...	2s. 6d.	,,

The service rendered is practically the same in each case.

In the interests of the scores of passengers who must be arriving annually at Liverpool from overseas with British motor cycles, I think this is a matter that should be taken up with the Mersey Docks and Harbour Board.

W. M. GRUNDY.

ENCOURAGEMENT FOR OWNERS OF OLD CROCKS.

Sir,—I was very pleased to see, in your number for August 10th, a paragraph under "Current Chat" on giving old machines a chance. Being one of the impecunious ones who can run to nothing better than a crock of from eight to ten years old, I have always been loth to join any motor cycling organisation in which the other members have modern machines.

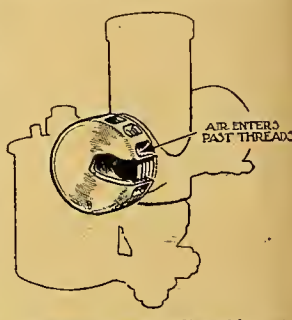
JAMES B. CAMPBELL.

Transvaal.

FUEL CONSUMPTION OF TWO-STROKES.

Sir,—As I have ridden an Allon since early in 1920, my experiences may prove of interest to "Old Bill" and to other Allon riders.

For some time after the machine was delivered, my consumption could not be improved over about 45 to 50 m.p.g., and inquiries to the carburetter manufacturers obtained answers which led me to believe this to be the average. However, I was not satisfied, and contrary to their advice, made and fitted a variable jet having a fine tapering needle. This jet, incidentally, is not varied during running unless extremely slow running is required, and is used more to correct for atmospheric variations.



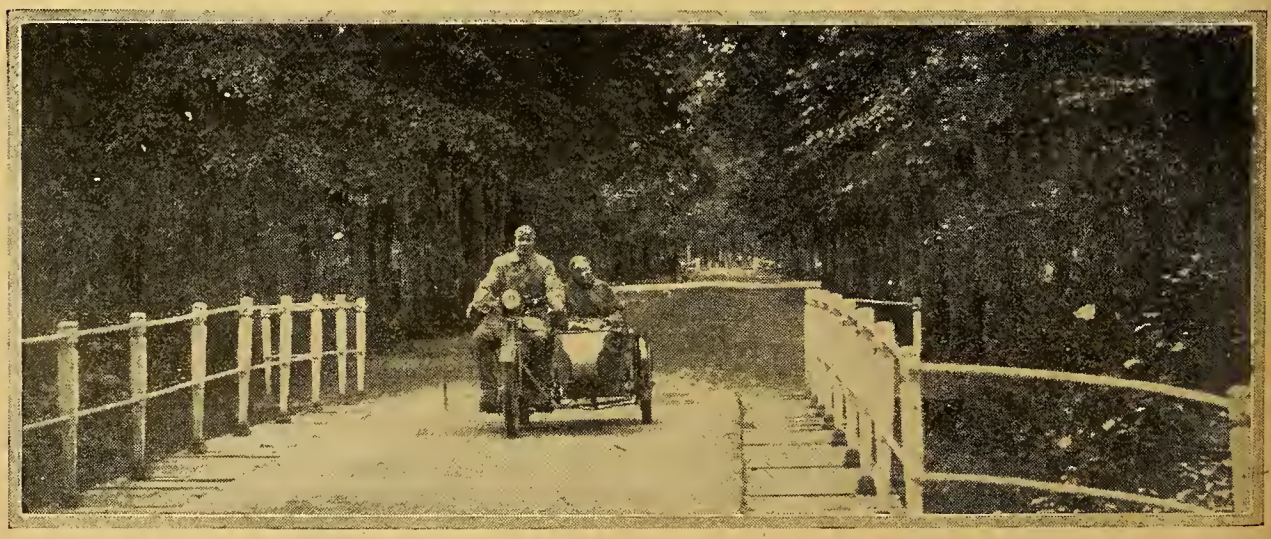
Elongated and adjustable air-holes in the cap of Mr. H. Lomas's B. and B. carburetter.

The petrol level was lowered considerably, and the cap over the main air intake had the holes enlarged and filed out, as shown in the sketch. The screw-thread was given a liberal coating of ordinary soft solder, which holds the cap in any desired position. By screwing this cap either further on or off, a variable air opening is formed at will.

The range of advance and retard of the magneto contact-breaker was more than doubled, so that a little more advance could be given, and very much more retard.

The results were astonishing. After making sure that everything ran free, I found the engine would fire quite evenly at 4 m.p.h. on top gear, and the petrol consumption dropped to 120 m.p.g. at an even speed of 20 m.p.h. At any speed up to 28 m.p.h. or so, and not driving in any way out of the ordinary, I regularly do about 95 m.p.g.

H. LOMAS.



IN A DUTCH TRIAL. Although flat, the scenery in Holland is not uninteresting. A Rudge sidecar at picturesque Orangewoud during the club championship event described last week.

SCHOOL-GIRL MOTOR CYCLISTS.

Sirs,—In my opinion, motor cycling either for a boy or a girl is the most healthy, invigorating sport possible. It cultivates self-confidence and presence of mind, and encourages the care of one's property.

Moreover, I see no reason why only boys should be granted the privilege of a motor cycle. Why should not their sisters have an equal privilege? There are many girls of 15 and 16 who are on a level, and even above, the boys regarding presence of mind and confidence, and most girls of to-day possess the spirit of sportsmanship to a great degree.

London, S.W.19. ELDER BROTHER.

SIDE-SLIP ON SPRING FRAME MACHINES.

Sir,—I should value any hints and remarks from owners of spring frame machines as regards side-slip in wet, or, rather, "greasy" weather.

I ride a Coulson-B., and find it impossible to avoid side-slip when riding in London on tarmac roads, and especially on tram lines.

During a sixteen-mile ride recently in the rain, from N.W. London to here, I came off twice, although riding very carefully at 12-16 m.p.h.

I am otherwise thoroughly satisfied with the Coulson.

Dunlop heavy 26 in. × 2½ in. × 2¼ in. tyres are fitted to the machine in question. XA5291.

Croydon.

IMPROVEMENTS TO THE LONDON-EXETER RUN.

Sir,—So far the suggestions to brighten the London-Exeter run that have appeared in your correspondence columns have, if one excepts "Quixix's" bun eating stunt, dealt only with the riding part of the job. I should like to suggest improved arrangements at the Exeter breakfast stop.

Last year competitors arrived at Exeter mostly wet to the skin, had to wait about in the cold for a 'bus to the hotel, and then found what can only be called an inferior breakfast awaiting them in a fireless dining hall.

Cannot an hotel be found in Exeter with a garage attached, and cannot the M.C.C. make it their business to see that the breakfast is one more suited to satisfy the wants of competitors who have been riding all night in pouring rain. HUNGRY HERBERT.

Isleworth.

DEPOSITS ON INLET VALVE ITEMS.

Sir,—Replying to "Interested," whose letter deals with deposit on the underside of inlet valves, this undoubtedly arises from road dust caught on surfaces made sticky by a layer of the unvaporised portion of the fuel. A similar deposit will often be found on the lower edge and rim of the inlet valve seating, but of course not in any part of the combustion chamber or on top of the valves. I have materially reduced the tendency for deposit to form by improving the vaporisation of the fuel at the carburetter. The underside of the valve is now less like the sticky surface of a fly-paper.

It is impracticable adequately to filter the incoming air, but it might be possible to move the air inlet by means of a flexible pipe to a less dusty position.

J. W. G. BROOKER.

Sir,—I have seen the letter from "Sidevalve" on the subject of deposit on valve stems. It is very extraordinary why some castor oils should cause this rubber-like deposit to form on the carburetter side of the inlet valves. I find the same deposit on my valves, but if "Sidevalve" will try Speedwell White Ideal oil—made by the British Oil and Turpentine Corporation, Ltd., of 55-56, Chancery Lane—he will find that this deposit does not form.

I do not think, however, that it is a good scheme to mix castor oil with petrol. As a matter of fact, I have found they will not mix. Before doing this it would be best for "Sidevalve" to communicate with the manufacturers, who can give him the best advice on the subject, but if he tries White Ideal he will find almost complete absence of carbon—anyway, that is my experience.

OSBORNE DE LISSA, Managing Director,
THE M.A.G. ENGINE COMPANY, LTD.

THE ETHICS OF "HANGING-ON."

Sir,—I am surprised to see that any of your readers should encourage the practice of "hanging on" by cyclists. I was an ardent cyclist myself before graduating to motor cycling in 1910, but my sympathies are all with "Norton Rider." Would Messrs. Godfrey and Thorpe consider it good manners to thrust their company on a couple out for a walk, and to insist on accompanying them wherever they went? Then why on earth should it be considered reasonable to do so when the same couple take to a sidecar outfit?

I myself strongly object to having a stranger's nose thrust down the neck of my wife while we are sidecarring, and the worst of it is that these people merely grow abusive when politely asked to desist: stronger measures are hardly possible to a motor cyclist in the company of the fair sex. Only last week, I jammed on my brake to avoid a cat that dashed across the road, and I heard a crash behind and a shower of abuse from a prone cyclist for not holding up my hand to indicate that I was going to slow down! I may say that the crash was the first intimation that I had that there was anyone behind in such close proximity: in any case, there is no time for such warnings in such circumstances. "Norton Rider's" remedy is barred to me, for the simple reason that my engine cannot be induced to smoke. I have seriously thought of carrying a small quantity of "tear" gas, however. I do not agree with Mr. Thorpe that only a cyclist of stamina and experience can keep up with the average motor cyclist: any cyclist worthy of the name can do 30 m.p.h. and more when deprived of practically the only force which normally retards him, viz., wind resistance: the other forces are negligible in comparison.

Every road-user has his rights, cyclists included, but intruding on the privacy of others is not one of them.

High Wycombe. BENEDICT.

SUMMARY OF CORRESPONDENCE.

"B.B.5042" (Newcastle) desires to thank the Morgan driver and his passenger who at 11.30 p.m. towed him on the Stratford-Birmingham Road, when held up with a broken belt too short to be repaired.

According to a Canadian correspondent, Mr. C. A. M. Lellen, the fact that Bosch magnetos are fitted to the latest consignments of four-valve Triumphs to arrive in Toronto has caused considerable surprise.

The sporting aid of a British garage proprietor in France, Mr. A. Burgess, of Caudebec-en-Cuax, is praised by Mr. F. W. Chapman, who was helped by him during an awkward fuel stop when on tour.

Referring to the letter last week from Mr. C. T. Williams regarding his unsatisfactory experiences with Jackson's Impervo in a patched tube, the makers of the latter commodity point out that their filling instructions clearly state that small patches should be removed before using the Impervo, which would then automatically seal the hole.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

GEAR RATIOS.

I wish to drop my gear from 4¾ to 1 top to about 6 to 1 top. The numbers of teeth are: engine sprocket, 22; gear box, 40; diameter of belt wheel 18 inches. What number of teeth shall I want on engine sprocket to get the desired ratio? J.L.C.B.

Before being able to calculate the size you require definitely, we need to know the diameter of the belt pulley on the gear box; this you have omitted to state. If, however, it is about 6½ in., which we assume it to be from the figures you give, you will need an engine sprocket with 18t to give the required top gear ratio.

CANCELLED SALE.

I arranged with a firm to buy a new motor cycle, the firm allowing me so much for my old machine. I had nearly completed the bargain by giving the dealer 30s. to get the licence, etc., but I had not paid for the machine. The following morning I rang up the firm and cancelled the order. When I asked for the return of my 30s. it was refused on the grounds that I was legally wrong in not accepting the new machine and the 30s. was kept on account of trouble. Is this legal?—J.H.

It is not clear from your letter whether a definite contract to purchase was undertaken, but by making a payment of 30s. on account of the new licence, etc., it would appear you agreed definitely to accept the machine. This being the case, the dealer is in a position to enforce the completion of the sale and you have no claim on the deposit which you made. If you do not wish to have the machine your best plan is to allow the dealer to retain the deposit if he is willing to release you from your obligations to complete the transaction.

LIGHT GEAR BOX ON BIG SINGLE.

Having an Albion two-speed gear box with 32 teeth on the sprocket and a 6in. pulley and a back wheel belt rim 18in., how many teeth should I want on the engine shaft sprocket for average speed riding, with a 599 c.c. Bradbury with occasional pillion rider?—G.H.C.

You would need 20t. on the engine shaft sprocket to give a top gear of 4¾ to 1. The 6in. pulley, however, is very small for the countershaft of your machine, as it is very likely that there will be a considerable amount of belt slip in wet weather; an 8in. pulley would be more satisfactory, in which case, however, a smaller number of teeth would be necessary on the engine shaft sprocket. The gear box is unduly light for your engine, and it is doubtful if the makers would recommend its use on a single-cylinder machine above 350 c.c. capacity.

FITTING TRIUMPH PRIMARY CHAIN.

The chain connecting the gear to the engine on the chain driven Triumph can only be taken off with great difficulty, but no man I know could put it on again even after dividing it and putting in a spring link instead of solid riveted one. Do you know of any plan for refitting this chain?—J. O'N.

The refitting of the primary driving chain on the Triumph machine is quite simple without dividing it; the sprocket on the engine shaft is of the self-withdrawing variety, and it should be unscrewed from the shaft and the chain passed over; it should then be easily refitted merely by tightening up the engine shaft nut.

Important Dates.

Wed., Oct. 4th, to Sun., Oct. 15.—Paris Salon.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd—Olympia Motor Cycle Show.

Tues., Dec. 26th and Wed., Dec. 27th.—M.C.C. London-Exeter Run.

Sat., Jan. 13th to Wed., Jan 24th (1923).—The Belgian Salon.

Fri., Jan. 26th to Sat., Feb. 3rd (1923).—Scottish Motor Show.

TYPICAL OF 1922. Surely this year holds the record for the number of events postponed on account of unfavourable weather conditions. Although it was an unridable surface that prevented the Kop hill-climb on September 23rd, rain was the root cause. Competitors and spectators awaiting the decision to hold the event on Saturday next (October 7th).

POWER FALLS OFF.

My machine developed good power for perhaps 2,000 to 3,000 miles, and then began to fail on bad hills, which it has hitherto climbed successfully. There just appears to be a general weakness and softness in its running; it has become more difficult to start, but is actually easier to kick over. Curiously enough it runs much more sweetly on the level, but its maximum speed is not quite as high, while the exhaust is considerably quieter than before, as it had a decided "bark" when new.—H.E.P.

The symptoms you describe are those ordinarily associated with the gradual falling away of power experienced when an engine has run a sufficient distance to require some adjustment and overhaul. Loss of compression is the cause of the weak running, and this is most probably due to leakage at the exhaust valves, which on inspection will be found to be burnt or pitted. If the valves are ground in (the valve seatings being trued if necessary) the original vitality of the engine should be restored.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"Connaught" (Harlesden).—Dynalite or Voltalite motor cycle electric lighting set on 350 c.c. machine, solo and sidecar: efficiency, wear of tyre or rim, burning-out bulbs and general behaviour at 10-30 m.p.h.

"J.K.D.C." (Nairn).—1,301 c.c. Henderson: suitability for solo use, speed, ease of control, reliability, brakes, stability on grease and at speed.

"L.E.B." (Steventon).—398 c.c. A.B.C.: general reliability, dependability of latest automatic lubrication, maintenance of tune with slight attention from an amateur.

"C.C.U." (Scarborough).—398 c.c. A.B.C., Barr and Stroud engined machines, 348 c.c. duplex frame Omega, 499 c.c. Rudge-Multi: comfort and average speed on long journeys, running costs, weather protection and reliability.

"J.E.C.R." (Chatham).—499 c.c. Triumph; hill-climbing, acceleration, valve clatter and general information.

"K.L.C." (Brighton). — 500 c.c. N.U.T.; 596 c.c. Indian Scout: reliability and speed.

"E.McC." (Liverpool). — 698 c.c. Raleigh; 499 c.c. Triumph: comfort and high average speed, stability on grease, mudguarding particularly, reliability and general information.

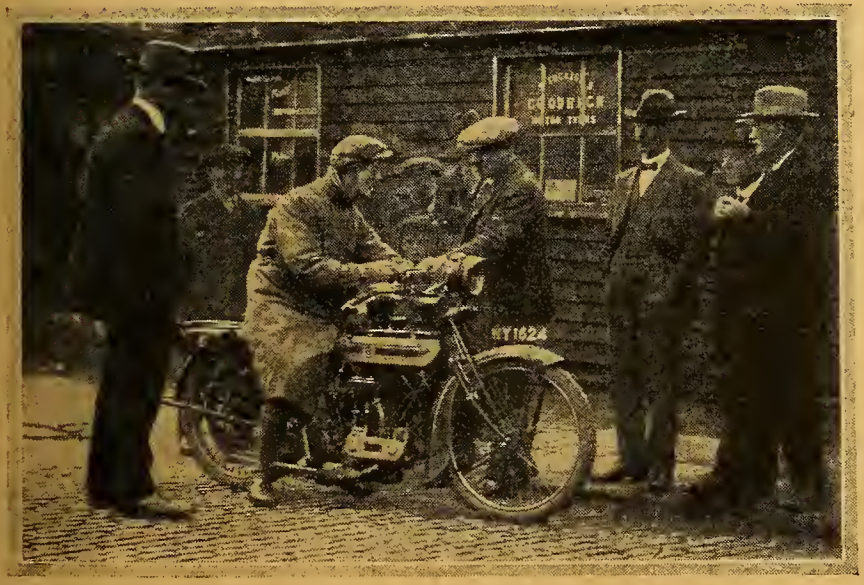
"L.L." (Brondesbury).—Maglita lighting and ignition on twin; Amac two-lever carburetter on twin.

"S.S." (Lowestoft).—Old 350 c.c. Royal Enfield and sidecar: fuel consumption.

"C.H.P." (Acton).—486 c.c. Scott Squirrel: Adjustment of gear chains, durability, retention of tune.

"F.E.F." (Southport). — 499 c.c. Rover, with sidecar: speed, petrol consumption, information as to general running.

"W.S." (France).—499 c.c. Dunelt sidecar outfit: reliability, running expenses, hill-climbing capacity, and particularly suitability for poor road surfaces.



"FIND THIS PLACE." J. Chadwick (550 Triumph) in the Keighley Dispatch Riders Trial receiving the name of an obscure farm which was one of the points to be discovered in the combined map reading and reliability test.

Found.

Near Hindhead, a small Gladstone type bag.—Ref. No. 108.

Changed Mount.

In the Western Centre Team Trial, J. H. Boakes rode a 349 c.c. Hobart, not a Cotton as reported. He secured a gold medal.

Small Single, Not Flat Twin.

J. M. Heath, who gained a second place in the East Mid-Centre Mansfield speed trials, rode a Coventry Eagle, not a Coventry Victor.

Change of Address.

The makers of the Rideezi sidecar have moved into larger premises. Their new address is Coleford Motors, Ltd., Rideezi Works, Western Road, Merton.

A Speedy Two-Stroke.

When he made fastest time in the two-stroke class at the recent Eastbourne speed trials, R. Green (249 Velocette) averaged over 50 m.p.h. for the up-hill half-mile.

A Doughty Miniature.

The J.E.S. ultra-lightweight which actually gained a gold medal in the recent Western Centre Inter-club Trial was unfortunately omitted from the list of machines surviving the course.

A Very Belated Award.

A gold medal has now been awarded to F. H. Brown, who rode a 550 c.c. Rex Acme sidecar outfit in the Midland Cycling and Athletic Club's 24-hour trial held on July 8th last.

Some Outstanding Successes.

B. Watts, riding a standard 342 c.c. Dot-Jap in the recent Stalybridge and District M.C. speed trial, gained several firsts and seconds in competition with much larger sports models in the 550, 750, and 1,000 c.c. classes.

Success of New Carburetter.

The Ekon carburetter, the design of which impressed us most favourably at its inception, is beginning to score successes in speed events. K. Rolfe's Humber, which, at 72 m.p.h., made fastest member's time at the Eastbourne speed trials, was fitted with this instrument, as also were P. Cameron's, 60 m.p.h., Zenith sidecar, which was the fastest passenger vehicle, and several other award-winning machines.

Catalogues Received.

Ransome and Marles Bearing Co., Ltd., Newark-on-Trent: Loose-leaf catalogue dealing fully with R. and M. ball and roller bearings.

Saxonia Electrical Wire Co., Ltd., Roan Works, Greenwich, S.E.10: Saxonia flexible wires, cables, and cords.

"Just," 7, The Mall, London, W.8: A trade list of French-made sparking plugs, terminals, washers, cables, etc.

CURRENT HAT

Times to Light Lamps.

Oct.	5th	.. ..	7. 0 p.m.
„	7th	.. ..	6.54 „
„	9th	.. ..	5.49 „
„	11th	.. ..	5.45 „

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Compulsory Insurance.

That all motorists should be legally compelled to insure is a suggestion that was recently quite seriously discussed by the leading motoring organisations in South Africa

London's Motor Cycle Police.

About a year ago the Scotland Yard Flying Squad was instituted, and it is now being reorganised under one of London's best detectives. It consists of trained men from each division who have fast sidecar outfits, and are ready to go out at once.

New Road between Liverpool and Manchester.

The Ministry of Transport has given approval to road reconstruction schemes estimated to cost approximately £1,500,000, and other claims are also being examined, one of the most important of which is a new road between Manchester and Liverpool to cost about three million pounds. The construction of this road, the Minister of Transport informs us, will solve a great traffic problem.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Hinged Forks for French Roads.

Motor cycle dealers in Paris, whilst admitting that British machines are the best, nearly all complain that the springs of their forks are too light for French roads. The most popular type of spring fork amongst French manufacturers is the same in principle as the Triumph type, *i.e.*, hinged.

This Week's Silencer Story.

On being stopped by the police for using an inefficient silencer, a reader explained the make of his machine and stated that the silencer was as fitted by the makers. The police sergeant at once said "Oh! If your silencer is a Triumph it's all right," and apologised for stopping him.

Sidelight on Conditions in U.S.A.

"Every town of 2,500 people or more ought to have at least one motor cycle dealer. How many of them have one? Not ten per cent. of all the towns of this size in the country."—An extract from an American trade paper that vividly illustrates how far behind Great Britain is the popularity of the motor cycle in the U.S.A.

Bogey Scores in Reliability Trials.

The substitution of a "bogey" time limit on test hills instead of the observations which have formerly been carried out in reliability trials is the interesting suggestion emanating from Ilkley, to remove the cause of many complaints which have arisen in the past. Details are given under the heading of "Club News" (Ilkley and District M.C. and L.C.C.).

The Most Popular Machines.

Taking a census of motor cycle traffic is quite a popular pastime with our readers. Here are the figures for an hour and a half on West Hill, Putney: Triumph, 14; Douglas, 13, A.J.S., 9; Matchless, 7; New Imperial, 6; Levis, 6; Royal Enfield, 6; New Hudson, 5; Rudge, 4; Harley-Davidson, 3; Indian, 3; Dunelt, 3; Raleigh, 2; Rover, 2; Ariel, 2; P. and M., 2; Norton, 2; B.S.A., 2; McKenzie, 2; N.U.T., 1; Royal Ruby, 1; Scott, 1; Wooler, 1; A.B.C., 1; unknown makes, 13. Has anybody done the same thing in Glasgow or Manchester or Bristol?

Scottish Motor Show in Glasgow.

As this year, the Scottish Motor Show will be held in the Kelvin Hall, Glasgow, opening on Friday, January 26th, and closing on Saturday, February 3rd (1923).

Presentation to Sir Alfred Mays-Smith.

Sir Alfred Mays-Smith, president of the Society of Motor Manufacturers and Traders in 1920-21 and 1921-22, was given a luncheon and presentation at the Royal Automobile Club recently.

Fine Profits.

The Indian organisation in America is largely advertising that New York's motor cycle police made a net profit of $481,662 in nine months, after deducting all operating expenses, including drivers' salaries. Obviously, to enjoy motor cycling in full in the States one must be a policeman

Cruelty to Tyres.

Why is it that some motor cyclists persist in riding their machines at an angle approaching 45° to the sidecar? Quite apart from the discomfort and slovenly appearance such a practice creates, the wear on all three tyres is seriously increased.

When the Cat's Away——

Along with a letter to the Editor received last week were two large rusty nails, which, a correspondent alleges, were found embedded business-end up in the tarred road through the village of Blythe Bridge. Before he had restarted after removing them, four more were stuck in the same place; he hied to the local police office, only to find the whole police force was away for his annual holiday.

A LILLIPUTIAN SADDLE. This model of the Terry spring saddle is a complete replica in every way, the sizes of the springs being exactly proportionate. The detail in the fine radiating coil springs is of course, lost in the reproduction.

SUCCESSFUL SCOTTISH MAKE. Quite a number of honours in Scottish speed events fall to the New Gerrard, which itself is built north of the Tweed. F. G. Porter on one of these machines ready to start in the 250 c.c. class, which he won, at last Saturday's Edinburgh open hill-climb at Bowhouse Brae.

250 c.c. Records Again Broken.

Further records fell at Brooklands during the last fortnight. On September 25th, H. Le Vack (249 New Imperial-Jap) accomplished the flying five miles and standing ten miles in 3m. 55.49s. and 8m. 10.17s. respectively—76.43 m.p.h. and 73.44 m.p.h. Five days earlier H. H. Beach (788 Norton sc.) broke the following records in the 600 c.c. sidecar class :—

			m.p.h.	k.p.h.
4h.	221m.	1,082yds.	= 55.40	= 89.15
12h.	631m.	1,396yds.	= 52.65	= 84.73.

			m.p.h.	k.p.h.
500 miles	9h.	31m.	48.37s. = 52.46	= 84.42.
600 miles	11h.	23m.	38.86s. = 52.65	= 84.73.

These also apply in the 1,000 c.c. class.

New A.C.U. Centre.

Formal permission of the A.C.U. has been granted for the formation of a new centre in the Bristol and Bath district. A combined general meeting of all the clubs interested, is called for Thursday, October 12th, at 7.30 p.m., at the Old Red House, New Bond Street, Bath.

NEXT WEEK

THE MOTOR CYCLE

will include an

Illustrated Review

of the Motor Cycle Exhibits

at the

Paris Salon.

THURSDAY. OCTOBER 12th.

Important Price Reductions.

New Imperial prices have been reduced as follows :—

293 c.c. Light Tourist ...	... £65
248 c.c. Super Sports ...	... £73
348 c.c. Super Sports ...	... £78
976 c.c. Sidecar Outfit ...	... £125

In addition a 293 c.c. lightweight sidecar outfit will be marketed at about £90.

Informal Hill-Climbs.

Informal hill-climbs, held recently by the Oxford Motor Club, have in each case been a great success, and another, therefore, will be held on the 7th inst. on Alms Hill, Henley, at 3 p.m.

Another Open Trial.

The Cheshire Centre A.C.U. open reliability trial, postponed some weeks ago, will be held on the 21st inst. The entry list has been reopened, and entries will be received by Capt. W. G. Hill, Hill's Garage, The Newgate, Chester.

FOR SINGLE GEARS ONLY. The "colonial" section in the Levis trial for single geared machines accounted for several failures, but B. Francis (169 Atlas) proceeded carefully and negotiated the rough going without loss of marks

"THE PETROL ST. LEGER."

Record for the Course Lowered at the Doncaster Speed Trials. "The Motor Cycle" Cup Changes Hands.

ONE does not naturally associate horse-racing with motor cycles, yet close beside the historic Doncaster Race-course, the scene of so many classic struggles, lies a stretch of fine speedway known as Sandall Beat Road.

Here, on Saturday last, gathered a goodly number of keen sportsmen and a fair crowd of spectators to witness the Yorkshire Centre speed trials organised by the Doncaster and District Motor Cycle Club.

This type of event seems to be popular in the North Country, for following close on the heels of the Scarborough speed trials the Doncaster event attracted no less than two hundred and thirty-five entries, amongst which were to be found the names of many famous riders. Unfortunately, however, H. Le Vack, who last year carried off *The Motor Cycle* Challenge Cup on an Indian was unable to be present to defend his title.

Favoured by the Weather.

Fine weather graced the proceedings, and though a few drops of rain fell during the last classes the sun shone for most of the time.

As for the course, the rather short flying start was desirable rather than otherwise, since a fairly sharp left-hand bend followed shortly after the starting-point This bend was taken wide by almost every competitor, and there followed a straight of almost half a mile in length with a slight curve in the long "pulling-up" stretch.

The start was timed for one o'clock, but actually the first man was dispatched at approximately 1.20. Yet the ambitious intention of the organisers—to complete the trials in five hours—was very nearly realised.

A Favourite's Mishap.

G. Dance (Sunbeam) led off with a good performance, but unfortunately his top gear slipped out and he finished in third place, being beaten by R. Cawthorne (Norton) and E. Searle (Sheffield Henderson). Results :—

CLASS 2A.—SIDECARS UP TO 550 C.C.
EXPERTS.

		m.p.h.
1.	R. T. Cawthorne (490 Norton sc.)	27s. = 66.67
2.	E. Searle (499 Sheffield-Henderson sc.)	29s. = 62.07
3.	G. Dance (499 Sunbeam sc.) ...	31s. = 58.06

Where entries permitted, each class was sub-divided into : A, experts; B, experts barred; C, novices; in the three first classes, however, there were no novices' events.

In Class 2B (up to 550 c.c., experts barred), W. H. Gillott (490 Norton Special with an o.h.v. engine, the head of which was designed by O. Padley), had bad luck, and for some mysterious reason his engine cut out half way down the course, F. Sisson, mounted on a standard o.h.v. Norton, carrying off the honours. Results :—

		m.p.h.
1.	F. Sisson (490 Norton sc.) ...	28s. = 64.29
2.	C. Waterhouse (492 Sunbeam sc.)	32⅘s. = 55.56
3.	H. Hollowell (490 Norton sc.)	33⅕s. = 53.25

750 c.c. Entries.

In Class 3 the class 2 entries were practically repeated since the only entry of over 500 c.c. was that of L. Askham, whose 633 c.c. Norton sidecar toured in misfiring badly. Results.

EXPERTS.

		m.p.h.
1.	R. T. Cawthorne (490 Norton sc.)	27⅗s. = 65.22
2.	E. Searle (500 Sheffield-Henderson sc.)	30s. = 60
3.	J. Hollowell (490 Norton sc.)	33⅕s. = 54.22

Dance toured in with a broken throttle wire.

In Section B Gillott's Norton Special never got going properly, Askham's Norton toured in, obviously in trouble, and Hollowell's Norton was still misfiring slightly, though it was fast enough to secure third place.

		m.p.h.
1.	F. Sisson (490 Norton sc.) ...	27⅗s. = 65.69
2.	C. Waterhouse (492 Sunbeam sc.)	32⅘s. = 55.58
3.	J. Hollowell (490 Norton sc.)	37s. = 48.65

The unlimited class brought forth four fresh entries, F. W. Dixon, a popular favourite, mounted on an eight-valve Harley-Davidson, G. Brough (976 Brough-Superior sc.), H. Hoffman on a similar mount, and P. C. Hall (976 Sunbeam sc.).

British Big Twin Success.

Once again George Dance's luck was out, and the fact that his inlet tappet unscrewed lost him a place.

EXPERTS.

		m.p.h.
1.	G. Brough (976 Brough Superior sc.)	26s. = 69.33
2.	F. W. Dixon (998 Harley-Davidson sc.)	26⅘s. = 68.18
3.	R. T. Cawthorne (490 Norton sc.)	26⅘s. = 67.16

It will be noted that ⅘s. covered the first three men in this class, and the running was so close that it was impossible to judge the winner until the results were given out. Cawthorne saved much time by steering a perfect course.

EXPERTS BARRED.

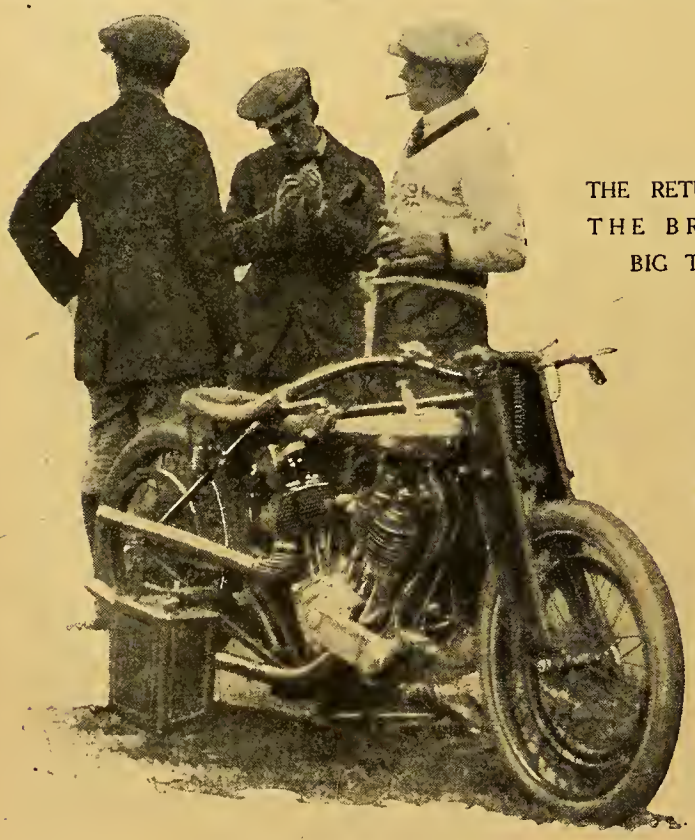
		m.p.h.
1.	F. Sisson (490 Norton sc.) ...	27⅗s. = 65.69
2.	H. L. Askham (490 Norton sc.)	33⅕s. = 53.25
3.	P. C. Hall (986 Sunbeam sc.)	37⅗s. = 48.13

Hoffman's Brough Superior was slow; he took the first curve wide and was not in good form.

While the big machines were having their sidecars removed preparatory to the big solo events, the smaller classes were run off, the first being for two-strokes only up to 250 c.c. The experts class resulted in a tie for first place.

		m.p.h.
1.	A. B. Dodds (247 Levis) }	
1.	G. Povey (249 Velocette) } ...	31⅘s. = 56.6
3.	L. Lancaster (249 Velocette) ...	37⅗s. = 48.13

When the tie was run off Dodds had the misfortune to stop just over the line



THE RETURN OF THE BRITISH BIG TWIN.

Geo. Brough (in white jersey), who made fastest time of the day on his 976 c.c. Brough Superior.

"The Petrol St. Leger."—

though the ultimate winner, G. Povey, exceeded his previous time by one second.

Section B produced eight entries and was won as follows :

	m.p.h.
1. H. C. Dodds (247 Levis) ...	34²⁄₅s.=52.33
2. L. Lancaster (249 Velocette) ...	36³⁄₅s.=49.18
3. F. W. Dosser (249 Velocette) ...	37⁴⁄₅s.=48.13

In addition, A. B. Dodds carried off the *Doncaster Chronicle* Cup for the fastest time by a local member in the 250 c.c. class, his brother, H. C. Dodds, being ineligible owing to the fact that he did not own the machine which he rode. Nevertheless, he made up for his loss in the novice class as below :

	m.p.h.
1. H. C. Dodds (247 Levis) ...	38²⁄₅s.=46.88
2. R. H. Dosser (249 Velocette) ...	38⁴⁄₅s.=46.39
3. E. W. Knibbs (225 Enfield) ...	40²⁄₅s.

A mistake with regard to the size of B. Kershaw's engine led to considerable confusion in Class 6A for solo machines up to 300 c.c., for he was first awarded premier position, then disqualified and finally reinstated. Results :

EXPERTS.

	m.p.h.
1. B. Kershaw (249 New Imperial)	28⁵⁄₅s.=62.94
2. R. Wood (250 Massey-Arran) ...	30⁴⁄₅s.=58.44
3. D. Prentice (250 Massey-Arran)	32²⁄₅s.=55.56

The experts-barred division of the same class produced a well deserved win by R. Wood, who rode well but did not get down low enough on his machine.

	m.p.h.
1. R. Wood (249 Massey-Arran) ...	30²⁄₅s.=59.21
2. R. B. Robinson (249 Trump) ...	31⁴⁄₅s.=56.62
3. H. C. Dodds (247 Levis) ...	32¹⁄₅s.=55.9

Novice Lightweight Riders.

H. C. Dodds' Levis seemed to be steadily improving, and produced a lovely clean hum, succeeding in carrying off the premier award in the novices' class.

NOVICES.

	m.p.h.
1. H. C. Dodds (247 Levis) ...	32s. =56.25
2. A. Hill (249 New Imperial) ...	32¹⁄₅s.=55.9
3. W. Wiltshire (249 Omega-Jap)	33²⁄₅s.=53.89

George Dance showed his true form for the first time in the 350 c.c. class, where, riding his Sunbeam, he lay right down to it and won at 72 m.p.h. ; he was, however, hard pressed by Handley (O.K. Junior), who rode remarkably well throughout the meeting and gained awards in classes well above his engine capacity.

	m.p.h.
1. G. Dance (349 Sunbeam) ...	25s. =72
2. W. L. Handley (349 O.K. Junior)	25²⁄₅s.=70.87
3. E. Searle (349 Sheffield-Henderson)	25³⁄₅s.=70.31

The experts-barred section produced no great excitement, except that K. J. Shuttleworth stopped about half-way down the course and pushed in. He was not communicative regarding his troubles, and appeared no more.

	m.p.h.
1. W. L. Handley (349 O.K. Junior)	25⁴⁄₅s.=69.77
2. S. Ford (350 Massey-Arran) ...	27s. =66.67
3. R. Gray (349 New Scale) ...	27¹⁄₅s.=66.18

Division C for novices was chiefly remarkable for the fact that riders would not get down on their tanks, and that there was a tie for third place between D. Brown (349 Royal Ruby) and G. Houghton (349 Sheffield-Henderson), which resulted in a victory for the former.

	m.p.h.
1. J. G. Bayne (349 Weatherell)	28³⁄₅s.=62.94
2. A. Hill (249 New Imperial) ...	31³⁄₅s.=56.96
3. D. Brown (349 Royal Ruby) ...	32¹⁄₅s.=54.88

Next came the class for machines up to 550 c.c., the best supported of the meeting, and consequently that for which *The Motor Cycle* challenge cup was awarded.

A Much-Coveted Trophy.

In the expert section the speeds were terrific and the riding superb. When Dance led off with a speed of 78.26 m.p.h. there were few who thought that he would be beaten. Yet R. T. Cawthorne, on an o.h.v. Norton, succeeded in lowering his time by ⅘ sec. and consequently carried off the coveted trophy. Dance made his last appearance in this class for his run of bad luck culminated in a broken valve rocker, which spoiled his final chance for an attempt at "fastest time."

	m.p.h.
1. R. T. Cawthorne (490 Norton)	22⁴⁄₅s.=78.97
2. G. Dance (499 Sunbeam) ...	23s. =78.26
3. H. W. Hassall (490 Norton) ...	23⁵⁄₅s.=76.27

Nortons again carried off the honours in the experts-barred section, though Handley on a 350 c.c. machine captured third place.

	m.p.h.
1. G. Bower (490 Norton) ...	24⁵⁄₅s.=73.17
2. F. Sisson (490 Norton) ...	24¹⁄₅s.=72.58
3. W. L. Handley (349 O.K. Junior)	25s. =72

As regards the novices class, one can only say that it was something of a farce, for out of twelve entrants only the three who were placed succeeded in beating a mile-a-minute gait. These were :

	m.p.h.
1. A. S. Pearce (490 Norton) ...	26⁴⁄₅s.=67.16
2. R. Turner (494 Douglas)	28¹⁄₅s.=63.83
3. F. Catterick (494 Douglas) ...	29s. =62.07

Since there is a shortage of 750 c.c. machines in this country, the next classes might well have been eliminated, for they produced practically the same entry as the 550 c.c. class, though the results were slightly varied.

EXPERTS.

	m.p.h.
1. R. T. Cawthorne (490 Norton)	23s. =78.26
2. H. W. Hassall (490 Norton) ...	23²⁄₅s.=76.92
3. J. W. Hollowell (490 Norton)	24³⁄₅s.=73.17

EXPERTS BARRED.

	m.p.h.
1. G. Bower (490 Norton) ...	24⁵⁄₅s.=73.17
2. F. Sisson (490 Norton) ...	24¹⁄₅s.=72.58
3. W. L. Handley (349 O.K. Junior)	26s. =69.33

In this event Sisson began to wobble after crossing the finishing line and hit the rails on the subsequent curve. Though carried to the infirmary with a damaged hand and ankle, he is expected to make an early recovery.

This was indeed an unfortunate climax to a consistently good series of performances, and we offer our sympathies to a first-class and plucky rider.

82½ Miles an Hour.

Everyone had been looking forward to the unlimited solo class, which was expected to develop into a duel between F. Dixon and George Brough, and since the latter had carried off the honours in the sidecar class there was much speculation, for Dixon's reputation stands high in the North.

Hassall led off in the experts class with a speed of 76.92. Good, but not good enough! Dixon followed with a half-mile at 81.08. Next came Cawthorne at 77.59, and, finally, George Brough at 82.57, whose comparative silence was deceptive, for he not only won his class but also lowered the record for the course. Results :

	m.p.h.
1. G. Brough (988 Brough Superior)	21⁴⁄₅s.=82.57
2. F. W. Dixon (988 Harley-Davidson)	22¹⁄₅s.=81.08
3. R. T. Cawthorne (490 Norton) ..	23¹⁄₅s.=77.59

EXPERTS BARRED.

	m.p.h.
1. G. Bower (490 Norton)	24⁵⁄₅s.=73.17
2. W. L. Handley (349 O.K. Junior)	25²⁄₅s.=70.87
3. W. H. Rhodes (998 Indian) ..	25⁵⁄₅s.=70.31

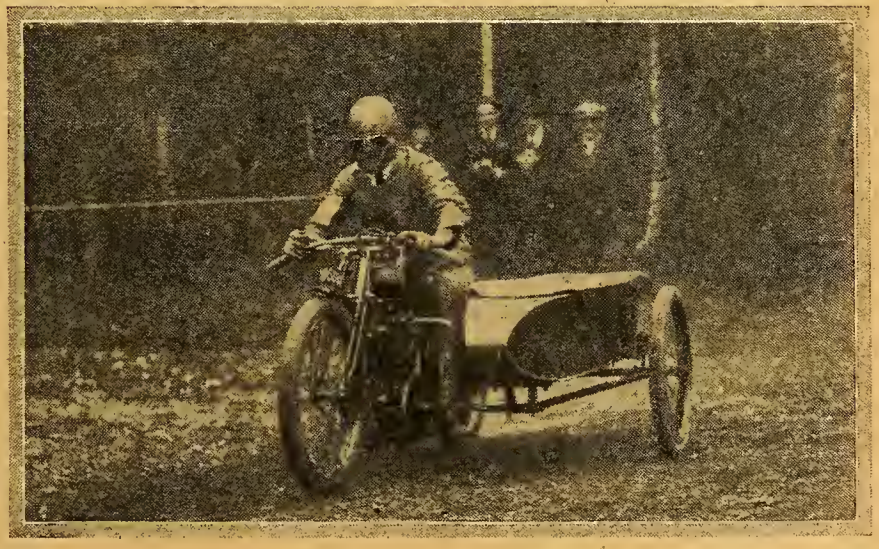
	m.p.h.
1. R. Turner (494 Douglas)	28²⁄₅s.=63.38
2. F. Catterick (494 Douglas)	30¹⁄₅s.=59.8
3. F. C. Hirst (490 Sunbeam)	31s.=58.06

Undoubtedly the meeting was a thorough success from the moment of the start until the last prize was given away by Councillor W. R. Leach.



E. Searle (499 Sheffield Henderson sidecar) at the start of the unlimited class for sidecars.

M.C.C. ONE-DAY SPORTI

THAT only 32 out of an entry of 98 claimed non-stop runs unmistakably indicates that last Saturday's M.C.C. sporting trial was not misnamed. But it might well have been curtailed to two circuits of a five-mile course, instead of two of fifty-eight miles each. The result would have been almost the same.

One hill—Rook—caused all the trouble; the other eight or so were too easy in themselves and too well interspersed with main roads to make the course in any way difficult. Had it rained, of course, there might have been a different story to tell.

Start, lunch-stop, and finish were at Caterham, and the route went up Succombs, High Lane, and Polesteeple hills, Sunningvale Avenue, and Cudham hill in the first thirteen miles. All are possible on second gear on a good 350 c.c. machine—only solo mounts were eligible for the trial—but the majority of the competitors took the safety measure of employing low.

Succombs failed a Wooler rider owing to his chain jumping off in the first circuit, and C. Walden (350 Beardmore-Precision) in the second; and Sunningvale was reported to have been too much for L. N. Stannah (499 Rover).

Two Treacherous Sections.

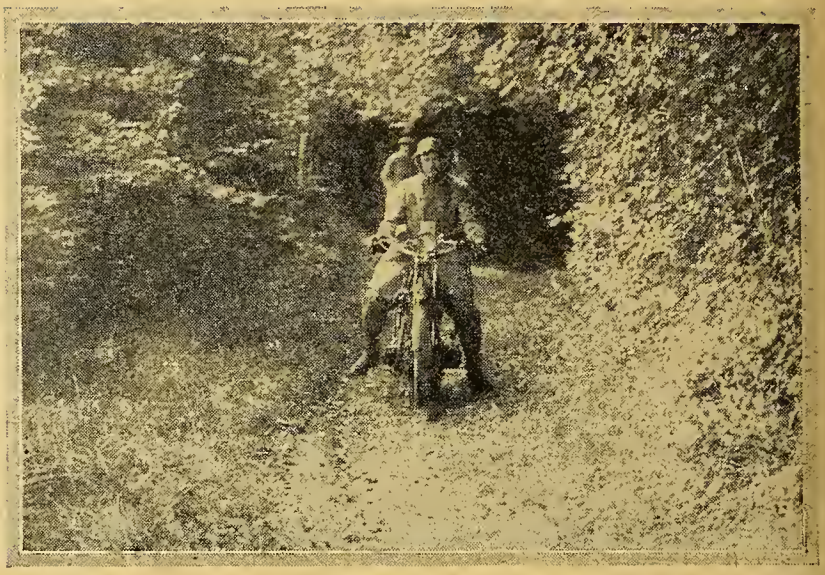
Rook is a narrow, winding path up a hillside, first through bushes, then through woods. It was wet under the shade of the trees, and two sections were distinctly treacherous. The upper one seemed worse, so we observed all the competitors there on the first circuit.

Unfortunately, there was no penalty for footing, and the main bulk of the O.K.-ed ascents were not at all imposing. There was a good deal of rank had driving, or, what in our eyes was no less heinous, paddling up without attempting to ride the machines at all.

Only seven competitors *deserved* full marks at this point: A. S. Guthrie (349 Diamond-B. and S.); R. L. T. Wasey (349 A.J.S.)—bounced all over the road, but never moved his feet; R. B. Clark (596 Sunbeam)—a magnificent climb, helped by a steel-studded rear tyre, but mainly owing to good driving; F. F. Salter (498 Zenith-Bradshaw); R. S. Newnham (349 Raleigh); F. A. Longman (498 Ariel); and Gus Kuhn (595 Douglas)—on a machine fitted with very up-swept touring handlebars.

Next in order of merit came W. D. Pugh (989 Harley-Davidson), F. T. Sibley (499 Rudge), H. G. Bell (748 F.N.), and R. W. Crauford (500 P.V.).

There were bright moments in the ascents of the following; all, however, were not quite so steady as they might have been:—A. C. Rhodes (499 Triumph), B. S. Allen (976 Brough-Superior), P. Cunningham (555 P. and M.), R. V. Saltmarsh (584 Harley-Davidson), F. W. Neill (976 Matchless), E. H. Gifford (498 Martinsyde), A. A. F. Symes (678 Martinsyde)—very fast and steady until he hit a boulder and nearly failed, E. J. Walter (498 Zenith-Bradshaw)—repeated Syme's



On its lower reaches Rook Hill is no more than a rough footpath. H. G. Bell (748 F.N.) manœuvring his lengthy and heavy machine up in a style that augers well for its stability.

At times pandemonium reigned on Rook Hill and although the competitors were running at one minute intervals baulking was common. A typical scene during the forenoon circuit.

Cudham Hill was not at all difficult on Sat (499

IAL FOR SOLO RIDERS.

W. A. Sweet (989 Harley-Davidson) a few moments before he joined the long list of failures on Rook Hill.

performance, W. Julian (247 Levis)—"hard lines" from the onlookers when he footed, R. Charlesworth (349 Zenith), and A. H. S. Love (490 Norton), who was taking no chances.

Absolute failures were—S. F. Farley (Henderson), K. Campbell-Cullen (349 A.J.S.), G. Richardson (247 Velocette)—after pushing for a space, T. E. Ranger (269 P.V.)—whom clouds of smoke made impossible to see, but he was heard to stop; C. Bourlet (498 Ariel)—complaining of a baulk lower down, W. A. Sweet (989 Harley-Davidson), Alan Hill (Francis-Barnett), and S. J. Marks (499 Triumph)—after a spectacular and nearly successful try at climbing a vertical bank.

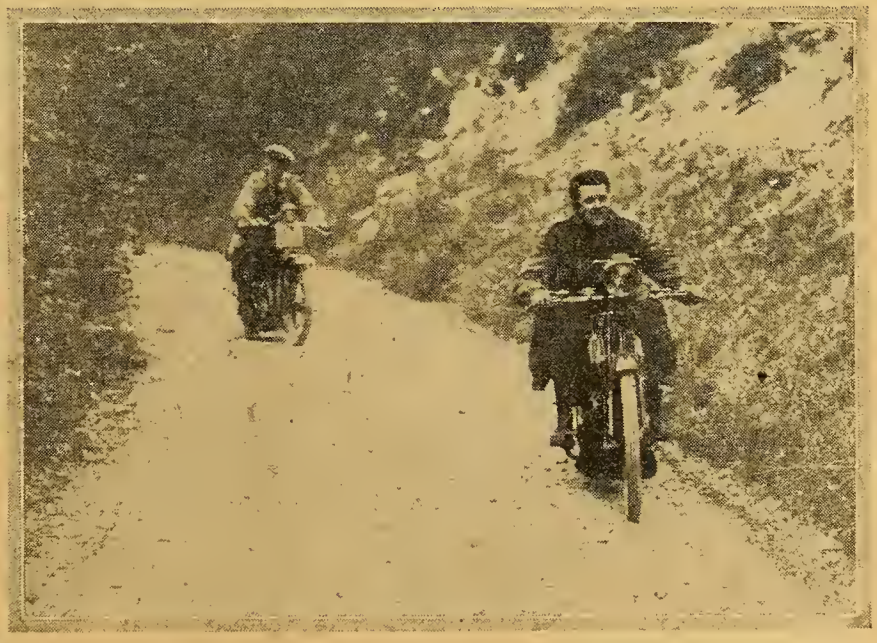
A hundred yards or so down the hill another twenty-four had met failure in a variety of forms, usually by skidding into a rut and falling off. The unfortunates were:—S. F. Farley (Henderson), F. J. Youngs (O.K.), C. J. Wheeler (Beardmore), P. Cunningham (P. and M.), J. McBirnie (998 Indian), R. N. Thomas (349 Hagg), S. M. Greening (348 Francis-Barnett), A. G. Wall (Connaught), C. H. Mocatta (248 Grindley), B. F. G. Fowkes (349 Beardmore), T. W. Buckle (748 F.N.), W. A. Sweet (989 Harley-Davidson), E. C. Barton (584 Harley-Davidson), E. H. Gifford (498 Martinsyde), J. E. Starnes (678 Martinsyde), E. J. Walter (498 Zenith-Bradshaw), J. W. Grose (398 A.B.C.), B. H. Brayne (499 Blackburne), C. C. Labin (678 Martinsyde), H. W. Harrington (596 Indian Scout), M. Pearson (550 Triumph), L. Heller (595 Douglas), W. C. Henry (349 A.J.S.), and S. C. Tait (349 James). One or two of these deserved a better fate, baulking being common, and Mocatta's stop was due to his goggles falling at an unpropitious moment.

Steady Ascents.

Particularly excellent crossings of this danger spot were made by:—B. Alan Hill (348 Francis-Barnett), who cleverly wormed his way through a melee of failures only to meet the unhappy fate, already recorded, higher up; H. G. Bell (F.N.), S. J. Marks (Triumph), another like Hill; A. H. S. Love (Norton), C. W. Lewis (Beardmore), R. B. Clark (596 Sunbeam), and H. B. Browning (349 A.J.S.), hampered by a flat rear tyre. Yorkshill, Paddledock, and Chalk Pit were all of no account, and the 42 survivors who set out, after lunch, on their second circuit worried only about Rook.

The lower section was the obvious point of interest this time. Only three men kept their feet on the rests—Guthrie

...lls (989 Harley-Davidson) and B. H. Brayne ri... up.



A. A. Attwood (548 Hawker) on the last hill of the circuit, Chalk Pit, followed by G. Pidgeon who most convincingly demonstrated that the new 490 c.c. Quadrant has lots of power

M.C.C. Sporting Trial.—(Diamond), and Clark (Sunbeam), who had already shown that they could ride, and A. H. S. Love (Norton). Sparks flew up from Clark's rear tyre, and there was quite a court of inquiry into his wheel tracks after he had passed.

Several more failed, including A. A. Attwood (550 Hawker), who gave G. Pidgeon (490 Quadrant) an opportunity of accomplishing some wonderful riding in avoiding a baulk; R. L. T. Wasey (349 A.J.S.), who came up at a do-or-die pace, determined to keep the "revs" up; H. G. Bell (748 F.N.), E. H. Gifford (498 Martinsyde), B. H. Brayne (499 Blackburne), and H. H. Robinson (349 Wooler), and A. Stanger (Stanger), both higher up after doing quite well where others had found the greatest difficulty. R. S. Newnham (349 Raleigh) skidded in a rut, and for a moment appeared to stop as his footrest crashed against a rock; his engine and rear wheel kept going, and he was given the benefit of the doubt.

One or two footed so cautiously and efficiently that they could hardly have fallen off had they tried; "Pa" Applebee (Levis) and E. J. Kehoe (Rudge) were typical of this class.

All the following were quite good: T. S. Sharratt (349 A.J.S.), B. S. Allen (976 Brough Superior), W. D. Pugh (989 Harley-Davidson), R. V. Crauford (499 P.V.), T. W. Buckle (F.N.), A. A. F. Symes (Martinsyde), C. F. Hollyoak (348 Federation), W. Julian (247 Levis), V. Belfield (499 Triumph), F. A. Longman (498 Ariel), R. Charlesworth (349 Zenith), and G. Kuhn (595 Douglas)—best of this batch.

Thirty-two claimed non-stops at the finish as follows:

A. S. Guthrie (Diamond), T. S. Sharratt (A.J.S), G. Pidgeon (Quadrant), C. L. Sprosen (Connaught), A. C. Rhodes (Triumph), B. S. Allen (Brough Superior), R. V. Saltmarsh (Harley-Davidson), W. D. Pugh (Harley-Davidson), H. A. Reyre (Ariel), J. Stanger (Stanger), F. W. Neill (Matchless), F. W. Applebee (Levis), W. N. Worthington (Wooler), F. T. Sibley (Rudge), J. A. Peacock (A.B.C.), T. L. Daniels (A.B.C.), R. B. Clark (Sunbeam), T. W. Buckle (F.N.), F. E. Salter (Zenith-Bradshaw), S. C. Pearce (Coventry Eagle), R. S. Newnham (Raleigh), S. Dunford (Verus), A. A. F. Symes (Martinsyde), P. L. B. Wills (Harley-Davidson), B. H. Brayne (Blackburne), C. F. Hollyoak (Federation), A. H. S. Love (Norton), W. Julian (Levis), F. A. Longman (Ariel), R. Charlesworth (Zenith), C. W. Lewis (Beardmore-Precision), G. Kuhn (Douglas).

A 490 c.c. QUADRANT.

Detachable Head and Side-by-Side Valves.

OLD-TIME riders will remember the days when the Quadrant single, distinguished by its aluminium silencer close up to the cylinder port, was one of the most popular machines of its day. Latterly the firm has specialised rather on big singles and has made a wonderful reputation during the past year with its hundred-guinea sidecar outfit.

Quite a novelty has now appeared which made its debut in Saturday's M.C.C. trial. It takes the form of a single cylinder engine of 79×100 mm. bore and stroke (490 c.c.).

Change in Valve Arrangement.

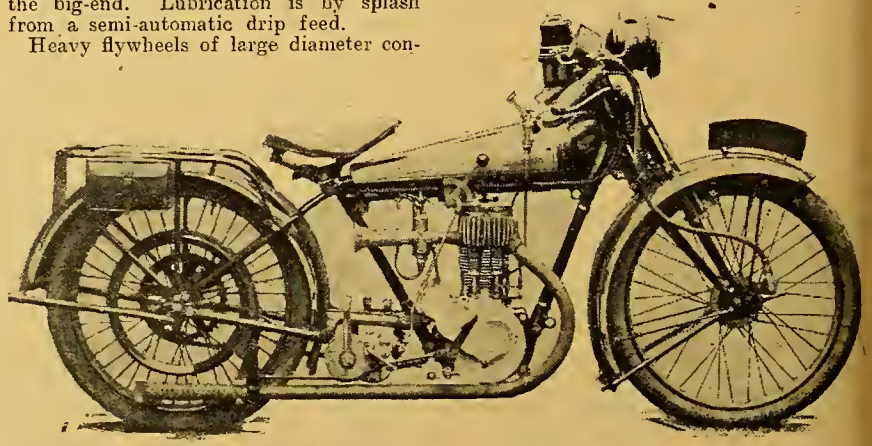
Instead of the normal Quadrant valve arrangements wherein the exhaust valve lies at the side of the engine and the inlet behind, the usual side by side valve lay-out is employed. These valves are carried in a detachable head amply ribbed with radial fins, and both head and cylinder are held to the crank case by two long bolts and a bridge apiece.

The piston has a recessed waist for the greater part of its length, and there are six radial ribs in the head; the gudgeon pin is locked to the piston boss by a grub screw, and there are two rings.

A separate cam is employed for each valve, the operation being through rockers, and the magneto, which lies behind the cylinder, is driven by a train of gears.

Plain bronze bushes carry the crankshaft, but a roller bearing is fitted in the big-end. Lubrication is by splash from a semi-automatic drip feed.

Heavy flywheels of large diameter contribute to the flexibility of the engine. The rest of the machine follows standard Quadrant lines, but is lighter in appearance and on more sporting lines. Either a two- or three-speed gear may be obtained, but in either case the transmission is by chain throughout.



A departure from accepted Quadrant practice, the new 490 c.c. model will appeal to solo riders. Side-by-side valves are carried in the detachable cylinder head, instead of the side exhaust and rear inlet so long associated with this make.

ALEC ROSS—AN APPRECIATION.

IT is with more than usual sorrow that one hears of the passing of Mr. Alec Ross. He was one of the real old brigade. You modern motor cyclists with your clutches and gears are denied the pleasure of delving into those past times when many present-day things were not.

In the days before the A.C.U., Alec Ross was there. When it was the Stanley Show—not Olympia—Alec Ross was a moving spirit. There was a time before V-belts and stands and carriers; when all controls were worked by levers on the tank; when our ignition was by accumulator and a mass of flimsy, short-circuiting wires; when we had to dismount to oil the engine.

Alec Ross is an integral part of the recollection of those days. The writer remembers well—oh! a horribly long time ago—complaining to Alec about the difficulty of retarding the spark on a hairpin corner when both hands were needed for steering. That led to a crude and unsightly but efficient handle-bar control being fitted to his magneto—the progenitor of a now invariable fitment.

Alec Ross, George Reynolds, Billy Pratt, "Vindec" Wells, Fred Straight—how the old faces come back with the names! Many we still have with us. Some, alas! have passed on. All are memorable links with the childhood of motor cycling. Now Alec Ross has dropped out. How he will be missed! Who will now be starter at all our big events? Right back to the times of the Quarterly Trials and beyond, one sees him marshalling the riders up to "Ebbie" or "Biddy" or "George." Only last month he was there as usual at the start every morning of the A.C.U. Six Days event, cheering the men, chaffing the ladies, affable but inflexible.

Now he has joined the majority. Another link with the past is gone. But one feels that Alec in his lifetime, by his enthusiasm, his energy, his sincerity, has forged many of those links by which the sport and industry of motor cycling hold together to-day and will continue so to do.

He has lived, and he has not lived in vain. We mourn his passing, but rejoice in ever having known him. A good fellow and a good friend. *Requiescat in pace.*

P.W.B.

THE TRUTH ABOUT TUNING.

Hints on How to Get the Best out of a Machine in Speed Events. No Short Cuts to Success.

WHAT is the difference between a sports model Blank motor cycle as sold to the public, and a machine bearing the same name—apparently similar in every respect—that, in the hands of the manufacturer's rider shines on Brooklands, and in the T.T., and wins innumerable "fastest times" at hill climbs?

It is a question over which the owner of a modern sporting motor cycle often ponders. His machine is invincible on the open road, in his local club events he does rather well, but one day in an open hill climb a trade rider will turn up on an identical machine, and forthwith proceed to make the previous record for the hill look like the result of a race for ancient cab horses.

No Short Cuts.

One cannot say to the owner of a long stroke Sunbeam: "Do this, and you will ascend gradients with a velocity hitherto only associated with Dance"; nor to a Douglas enthusiast, "Do that, and you will traverse a kilometre of Brooklands track in the same space of time as that occupied by Pullin." No, the speed shown by these trade machines—freaks excepted—is the result of weeks of hard work, and in addition the knowledge of where the work is needed.

However, the following notes may assist the ambitious amateur rider to reap a few more "fastest times," a few more "firsts," and, perhaps, some day to bring his time for a hill down to a figure more approaching that of Dance.

We will assume that the cycle to be livened up is a 500 c.c. sports model single cylinder—the most popular type of this class. Gear, clutch, and all-chain drive are essential, belt drive being obsolete so far as speed work is concerned.

First, before they are forgotten, the cycle parts and the transmission must receive attention. If the reader does not know how to do this, he may as well skip the rest of this article.

Hard Work, But Worth It.

Then take the engine out of the frame, and dismantle. Examine the cylinder walls for any sign of scores. No matter how slight they must be ground away. Clean all traces of carbon from the cylinder head and ports, rubbing with emery cloth wrapped round a stick until a fine polish results. (Hard work this, but well worth it.) Examine the valve seatings for pit marks. Polish the valves in the same way as the cylinder head, and grind in slightly with crocus powder and oil before replacing. Change the valve springs often, and—this is important—get them direct from the manufacturer, asking him for those of a strength suitable for speed work.

Polish the piston head. Remove the rings and clear out every trace of carbon, not forgetting the inside of the piston. Examine the rings and piston skirt for bright patches, which show where unnecessary friction is taking place. Take these bright marks down with emery *paper*, No. 00 for preference. After this the piston may, with advantage, be lapped into the cylinder with crocus powder and oil, but this should not be overdone. A few minutes' careful "in and out" work will ensure you a compression like a brick. Take the most particular care to remove all traces of abrasive from the cylinder, piston, and rings before assembling.

Clear all carbon deposit from the exhaust pipe, and, of course, the silencer, if fitted. Tangles of copper turnings—intended, my landlady informs me, for cleaning greasy dishes—may be obtained from any ironmonger, and these, if tied to a length of string and used as a "pull-through," will do the work most efficiently.

Attention to Bearings.

Any plain bearings in the engine must be examined for bright spots in the same way as the piston, and treated accordingly. Roller and ball bearings should be thoroughly swilled out with paraffin, and oiled again before assembling.

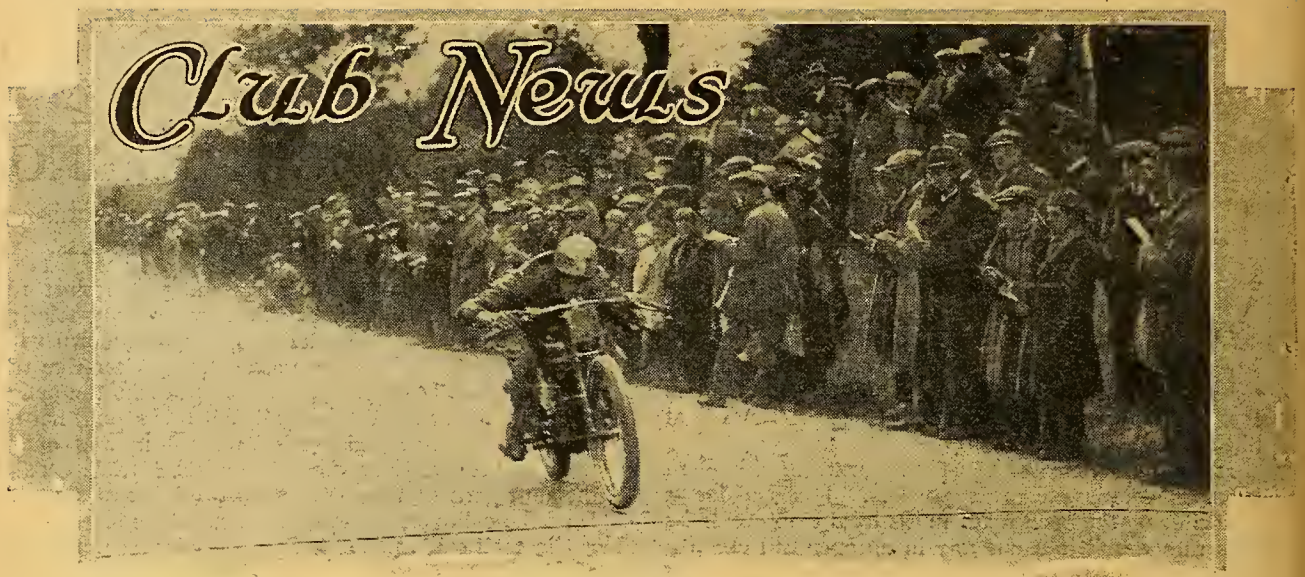
Clean out the carburetter, including petrol pipe and tap. See that the air vent in the tank filler cap is clear. The petrol level must be high enough to form a bead of petrol at the jet, without overflowing. With both controls fully opened, there should be a perfectly clear passage through into the induction pipe. The jet size should be such that the engine when all out will just, and only just, take full air.

Keep the contact breaker scrupulously clean. A stronger spring can often be fitted here with advantage. Experiment on the road with a further advance of the ignition timing; ascertain the setting that gives the maximum speed at full throttle, then set this as full advance, and check that with the control; in this position the points break when the armature is at its stickiest point of rotation, thus ensuring the hottest spark.

As regards oil, petrol, tyres and other equipment, one cannot do better than adopt the brands the manufacturers of the machine use in competition work.

It will be noticed that in the foregoing I have not made a single suggestion that could be termed in any way startling. I have not recommended any alteration in valve timing, or compression ratio, etc., for the reason that most manufacturers send out their sports models with the best timing and compression for the job. The programme I have detailed constitutes a long spell of hard and not particularly interesting work, but it must be realised that to get the results expected the minutest care must be taken over every operation. In addition, it will be found that to continue bringing home "firsts" on a Saturday evening, this programme must needs be repeated pretty frequently.

P. S.



F. T. Hatton (733 Douglas) making fastest time of the day at the recent Sutton Coldfield A.C. hill-climb at Angel Bank.

Redhill and Reigate M.C.C.

Speed trials will be held over a quarter-mile course within five miles of Redbill, commencing at 2.30 p.m. on the 11th inst. Club members only are eligible.

Richmond, Twickenham and District M.C.C.

An inaugural general meeting was held on the 30th ult., when several matters, including a comprehensive social programme for the winter months, were discussed. Intending members should communicate with the hon. secretary, Mr. J. A. Elfick, 64, Castle Road, Isleworth.

Rotherham M.C.

The third annual reliability trial for the Pickford Trophy was run off on the 23rd ult. Seven competitors finished the course. Results:

1, H. Beeden (Sunbeam), lost no marks, winner of trophy; 2, B. Glen (550 Triumph sc.), lost 2 marks, gold medal; 3, E. Bishop (998 Indian), lost 3 marks, silver medal.

West Kent M.C.

Starting from The Mill, Keston, on the 15th inst., competitors in the Lister-Wilson Silver Challenge Cup Trial will be required to cover two non-stop circuits of 25 miles each. In addition to the premier award, silver and bronze medals will be awarded. Entries must be received by Mr. A. E. Jessop, 91, Park End, Bromley, not later than October 12th.

Surbiton M.C.

A half-day sporting trial for the Ballard's Challenge Cup will be held on Saturday next, starting from "The Angel Hotel," Thames Ditton, at 3 p.m. No watches, speedometers, or measuring instruments of any description will be allowed, so that the trial will thoroughly test the competitors' ability to ride to a 20 m.p.h. schedule without guidance of any description.

Liverpool M.C.

—No less than four challenge cups are offered by the Liverpool Motor Club in the Reliance Trial, to be held on the 14th inst. The very mixed course over 120 miles of North Wales road has always appealed to the sporting rider, and many well-known teams and drivers figure in the entries. Particulars are obtainable from Mr. H. R. Caldwell, 14, Wood Street, Liverpool.

Bristol M.C. and L.C.C.

Owing to unavoidable circumstances, the completion of the season's competition programme has been revised as follows:

The Walters Cup Trial, to be run over a sporting and hilly course, is fixed for the 7th inst. A formula hill-climb for the Committee Cup will be held on the 14th inst. The six-hour trial (held in place of the postponed twelve-hour trial) clashed with the Western Centre Team Trial on the 23rd ult., so a second postponement is made necessary, viz., until the 21st inst. The Captain's Run will take place on the 28th inst. November 18th is the date fixed for the club's annual dinner, to be held at headquarters.

Birmingham M.C.C.

Official results in the Llangollen Trial held on the 9th ult. are now to hand, and are as follow:—

Special award for the best performance, H. J. Stretton-Ward (499 Triumph).

Special award in:—

Class A. (experts), C. F. Hollyoak (249 Federation).

Class A. (novices), A. H. Stubbs (269 Matloe).

Class B. (experts), B. Bourke (595 New Hudson sc.).

Class B. (novices), H. J. Sime (633 Norton sc.).

SILVER MEDALS.—R. W. Duke (499 Triumph), S. A. Francis (292 Sirrah), H. C. Jennens (500 James), A. Adcock (348 Raleigh), H. F. Brinkworth (348 Omega), F. Hayes (211 New Hudson), A. B. Jarret (490 Norton), R.C. Bennet (249 Federation).

A sporting half-day trial open to all clubs in the Midland centre will take place on the 23rd inst.

Week-End Club Events.

Oct. 5th.—Ealing and District M.C.C.—Evening Novelty Trial.
Oct. 7th.—Essex County and Southend A.C.—Closed Speed Trials.
Oct. 7th.—Bristol M.C. and L.C.C.—Walter's Cup Trial.
Oct. 7th.—North Liverpool M.C.C.—Speed Trials.
Oct. 7th.—Coatbridge, Airdrie and District M.C.C. —Non-stop Trial.
Oct. 7th.—Coventry Triangle Club.—Run to Meriden Shaft Wood.
Oct. 7th.—Coventry and Warwickshire M.C.—Manville Trophy Trial.
Oct. 7th.—Doncaster and District M.C.C.—Nottingham Goose Fair.
Oct. 7th.—South Midland Centre A.C.U.—Hill Climb at Kop.
Oct. 8th.—Newcastle and Northern M.C.—Picnic Run.
Oct. 8th.—Matlock and West Derbyshire M. and M.C.C.—"Stop and Out of It" Trial.
Oct. 8th.—Manchester M.C.—Special Event.
Oct. 8th.—Coventry Triangle M.C.—Run to Chipping Campden.
Oct. 8th.—Prestwich and District M.C.—Social Run.
Oct. 8th.—Barrow and District M.C.—Open Event.
Oct. 8th.—Eastbourne and District M.C.C.—Competition.
Oct. 8th.—Halifax and District M.C. and L.C.C.—Run to Boston Spa.
Oct. 8th.—Atherton and District M.C.C.—Surprise Run.
Oct. 8th.—Leeds M.U.—Run to Baildon Moors and Ilkley Moors.
Oct. 8th.—Sheffield M.C.C.—Run to Buxton.
Oct. 8th.—Bradford M.C. and L.C.C.—Hill Climb.
Oct. 11th.—Scarborough and District M.C.—Autumn Reliability Trial.
Oct. 12th.—Matlock and West Derbyshire M. and M.C.C.—Night Point-to-Point Reliability Trial.

East Midland Centre A.C.U.

The team trial which was arranged to take place on the 30th ult. has now been postponed until next Saturday, the 8th inst.

Yorkshire Centre A.C.U.

The next meeting of the Centre Board will take place at 7 p.m. on Monday, the 9th inst., at the Guildford Hotel, Leeds, when several matters of interest will be discussed.

Ferryhill and District M.C.

Seventeen riders competed in the consistency hill-climb held at Red Brier Hill on the 24th ult. First place was taken by T. Oliver (B.S.A.), who covered the course twice, recording exactly the same time for each climb. H. Reed (989 Harley-Davidson) and H. Hodgson (989 Harley-Davidson) took second and third place.

Ealing and District M.C.C.

Novel features will be introduced into the club's evening trial, to take place to-night (Thursday). Competitors will start from Kew Green at 5 p.m., and supper, followed by a dance, will be taken at the Vaudeville River Club, Thames Ditton. The club invites entries from members of the Surbiton M.C.

Preston (Brighton) M.C.C.

On the 24th ult. a very successful reliability trial over a 110 miles course was run off, in which the Brighton and Hove Club and Lewes Club also participated. There was a good attendance, despite threatening weather. Results:

(1) W. Williams (348 Douglas), lost 2 marks.
(2) A. H. Cox (499 Triumph), lost 3 marks.
(3) W. Kettle (398 A.B.C.), lost 6¼ marks.

The club is arranging a programme of social events for the winter, and a permanent club room is being sought.

Tavistock M.C.C.

There was a large crowd present at Culver Hill, Lamerton, to witness the first hill-climb organised by the club. The number of entries was gratifying, the hill being ascended forty-two times. Fastest time of the day was made G. D. Shellabear (976 Zenith), who covered the 1,000 yards course in 42s. Results:

300 c.c.—1, C. Ham (247 Levis), 66s.; 2, J. Grigg (250 Federal), 70⅕s.; 3, C. Marton (225 Enfield), 73⅕s.

350 c.c.—1, R. Carr (349 A.J.S.), 48⅕s.; 2, F. Downs (293 Coventry Eagle), 51s.; 3, F. Cowling (349 A.J.S.), 52⅕s.

500 c.c.—1, H. J. Piper (492 Sunbeam), 42⅖s.; 2, F. Cowling (349 A.J.S.), 46⅕s.; 3, B. A. Blackborrow (499 Rover), 48⅖s.

650 c.c.—1, R. G. Hawkings (557 B.S.A.), 50s.; 2, E. H. Kitchen (595 New Hudson), 54⅗s.

UNLIMITED.—1, G. D. Shellabear (976 Zenith), 42s.; 2, H. J. Piper (492 Sunbeam), 42⅕s.; 3, J. Pearn (492 Sunbeam), 46s.

850 c.c. SIDECARS.—1, E. H. Kitchen (595 New Hudson sc.), 69⅗s.; 2, R. Carr (654 Quadrant sc.), 84s.

UNLIMITED SIDECARS.—1, E. G. Sargent (678 Martinsyde sc.), 75⅘s.; 2, C. Ham (976 Royal Enfield sc.), 79⅖s.

Glasgow M.C.C.

An open hill climb will be held at Dalgair Brae, near Sorn, on the 30th inst. Sixteen classes, for general, expert, and novice riders are included in the programme.

North London M.C.C.

Results of the Beaurain Trophy Trial, held on the 9th ult., are now to hand, and are as follows:—

BEAURAIN TROPHY AND GOLD MEDAL.—S. M. Greening (348 Francis-Barnett sc.).

GOLD MEDAL.—R. H. Baxter (247 Radco).

BRONZE MEDALS.—F. J. Youngs (292 O.K. Junior), B. Staley (550 Triumph), R. H. May (567 B.S.A.), H. V. Bateman (1301 Henderson sc.).

Gravesend and District M.C.C.

Results of the Penlerick Cup trials held on the 17th ult., show that W. Pinn (976 Matchless sc.) wins the cup for the present year. R. Baxter, riding a 247 c.c. Radco took second place. At the conclusion of the trial a hill climb was staged on the test hill at Trosley, when the following times were recorded:—

Lightweight Class.—J. Payne (350 Beardmore Precision), 53s.

Heavyweight Class.—V. Deacock (481 Scott), 54s.

Sidecar Class.—J. Milton (976 Matchless sc.), 58s.

Senny Bridge and District M.C.C.

Only recently formed, the club held a successful hill climb on the 9th ult. Results:—

CLOSED CLASSES.

250 c.c.—D. Rogers (248 New Imperial).
350 c.c.—R. Davies (348 Cotton).
600 c.c.—C. Wild (499 Triumph).

NOVICE CLASSES.

250 c.c.—D. J. Thomas (248 Cotton).
350 c.c.—R. Davies (348 Cotton).
600 c.c.—C. Wild (499 Triumph).
Unlimited.—C. Wild (499 Triumph).

OPEN GENERAL CLASSES.

250 c.c.—Luther Davies (250 Diamond).
350 c.c.—R. Davies (348 Cotton).
600 c.c.—Handel Davies (348 Cotton).
Unlimited.—Handel Davies (348 Cotton).

OPEN SIDECAR CLASS.

Unlimited.—T. Lomax (481 Scott sc.).

Coventry and Warwickshire M.C.

Saturday next is the date fixed for the Manville Cup trial. The premier award offered is presented by Mr. E. Manville, M.P.

Central Cornwall M.C.C.

Now confirmed by the committee, the results of the hill-climb already referred to in *The Motor Cycle* give fastest time of the day to G. Symonds (492 Sunbeam).

Lichfield and District M.C.C.

Results of the open speed trials held in Ingestre Park, Rugeley, on August 19th are now to hand, and are as follows:—

300 c.c.—(1) C. Jones (249 Diamond), 21²⁄₅s.
380 c.c.—(1) W. S. Aston (348 Diamond), 17⅘s.
600 c.c.—(1) D. A. Stamps (490 Norton), 17s.
(2) B. Fidgeon (490 Norton), 18s.
Unlimited.—(1) B. Fidgeon (490 Norton), 16⅗s.
(2) D. A. Stamps (490 Norton), 17²⁄₅s.

Unlimited (on formula).—C. Jones (249 Diamond), 22⅘s.

Fastest time of the day was made by D. A. Stamps, who covered the course in 16²⁄₅s.

The second round for the Hoskison Cup was run off last week end, but the result is not yet available.

Sutton Coldfield and North Birmingham A.C.

Particulars of special awards made at the Angel Bank hill-climb held on September 23rd and described in last week's issue of *The Motor Cycle* are now to hand. The awards given by the club take the form of tankards, and were allotted as follows: Fastest time in 250 c.c. class: N. Hall (249 O.K. Junior); time, 38s. Fastest time in 250-500 c.c. class: H. Hassall (490 Norton) 26½s. Fastest time by machine over 500 c.c.: F. T. Hatton (733 Colmore-Douglas); 25⅗s. Best performance by car or cycle car: N. Norris (976 Morgan); 37²⁄₅s.; 1,346 points on formula. Fastest time in car class: N. Norris (976 Morgan); 37²⁄₅s. Fastest time by novice: E. Arthur (976 Brough-Superior); 31½s. The club's next fixture is a half-day trial for the Sutton and Shell Cups, Hooper Rose Bowl, etc., to be held on the 14th inst.

Lune Valley M.C.C.

Speed trials were held on Hest Bank Sands on the 17th ult., over a half-mile course; the following riders were successful:—

350 c.c.

(1) J. N. Yates, jnr. (349 Sheffield-Henderson).
(2) B. A. Pemberton (350 Matador-Bradshaw).
(3) G. Hardman (349 Coulson B.).

600 c.c.

(1) H. Baxter (490 Norton).
(2) J. N. Yates, jnr. (349 Sheffield-Henderson).
(3) B. A. Pemberton (350 Matador-Bradshaw).

UNLIMITED HANDICAP.

(1) R. Topping (481 Scott).
(2) J. Brown (532 Scott).
(3) B. A. Pemberton (350 Matador-Bradsbaw).

UNLIMITED SIDECARS.

(1) E. B. Parkinson (978 Brough-Superior sc.).
(2) A. Jepson (498 Zenith-Bradshaw sc.).
(3) L. Haige (532 Scott sc.).

UNLIMITED SIDECAR HANDICAP.

(1) A. Jepson (498 Zenith-Bradshaw sc.).
(2) L. Haige (532 Scott sc.).
(3) R. Thomson (986 Morgan).

Ilkley and District M.C. and L.C.C.

In place of observed hills in the Yorkshire Centre trial on the 28th there will be a series of timed stretches. A circuit of 50 miles to be ridden once in the morning and once in the afternoon, through Wharfedale, Washburndale and Nidderdale, will contain, it is proposed, three of these stretches. One will be at Jack Hill, near Fewston, one at Middle Tongue, near Pateley Bridge, and one in Upper Washburndale to include Whinney Hill (familiarly known as "The Staircase"), and a couple of water splashes. Over each of these stretches a special time limit will be arranged. It is practically the equivalent of "bogey" on a golf course, but this "bogey" will vary with each class of motor cycle competing. For every half-minute or part of a half-minute by which the competitor exceeds the time limit he will be penalised to the extent of two marks, whilst in the event of a tie the riders whose times are most consistent over these "bogey" sections will be declared the winner. The "bogey" times for the respective classes of machine will be stated on the route cards.

RECORDS IN THE BOIS DE BOULOGNE.

C. G. Pullin Repeats Brooklands Form, attaining 98 m.p.h. Mean Speed on a 733 c.c. Douglas.

FOURTEEN records were broken or established over the flying kilometre, in the Bois de Boulogne, Paris, on the morning of September 26th. The fastest run of the day was made by C. G. Pullin (733 Douglas), whose average time for the kilometre covered in two directions, in accordance with the international rules, was 22.88sec. (98.039 m.p.h.). By this performance he beat the 750 c.c. record held by Judd (Norton), which stood at 24.87sec.

In the 350 c.c. class, Pullin on his 349 c.c. machine broke another record by covering the kilometre in 24.4sec., or 91.72 m.p.h. This beats Le Vack's (New Imperial) time of 26.97sec. In the equivalent sidecar class he put up 31.59sec., or 70.804 m.p.h., again beating the old record held by Le Vack. Finally, in the 1,000 c.c. sidecar class he attained an average of 83.76 miles an hour, his average time for the two runs being 26.72sec.

Under Municipal Auspices.

The Bois de Boulogne records were held in the famous Avenue des Acacias, the use of which had been granted by the Paris Municipal Council. The event should have been held several days earlier, but owing to a misunderstanding the road had been tarred too late and had not dried sufficiently to make the runs safe. When finally held, ideal weather conditions prevailed, the road was perfectly dry, and there was an entire absence of wind. Although the trials were held very early in the morning—the first machine was sent away about 7 o'clock—a large number of spectators attended. The following are the best times in each class:—

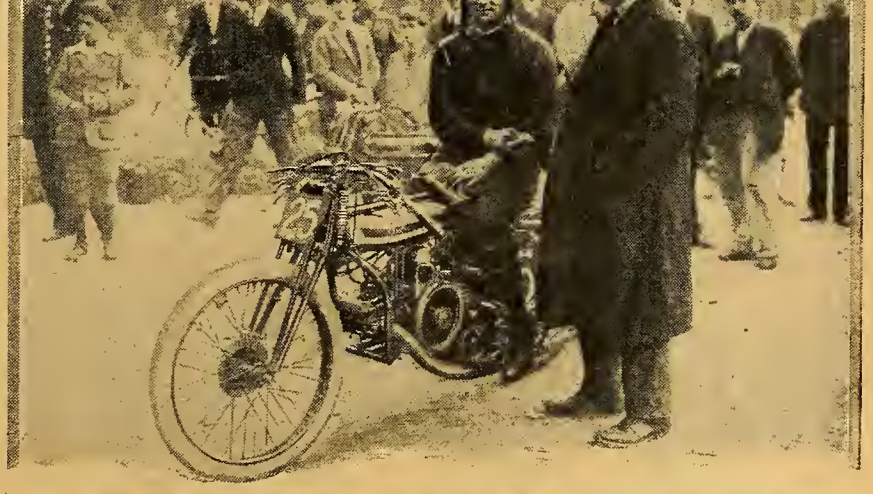
250 c.c. SOLO.—Marchand (D.F.R.), 31.17s. = record average speed 71.95 m.p.h.; former record 71.42 m.p.h.

350 c.c. SOLO.—C. G. Pullin (Douglas), 24.4s. = record average speed 91.72 m.p.h.; former record 83.07 m.p.h.

750 c.c. SOLO.—C. G. Pullin (Douglas), 22.88s. = record average speed 98.039 m.p.h.; former record 89.91 m.p.h.

350 c.c. SIDECARS.—C. G. Pullin (Douglas), 31.59s. = record average speed 70.804 m.p.h.; former record 64.1 m.p.h.

1,000 c.c. SIDECARS.—C. G. Pullin (Douglas), 26.72s. = record average speed 83.76 m.p.h.; former record 77.12 m.p.h.



Congratulations—and worthy of them. C. G. Pullin and his o.h.v. Douglas posing for the inevitable photographer after his sweeping victory in Paris.

IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

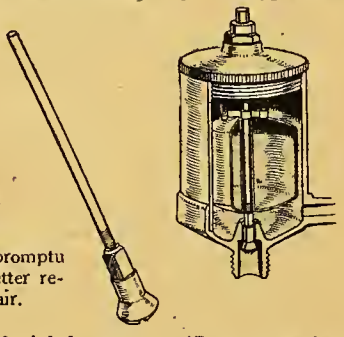
Compression Ratios.

COMPRESSION ratio has a marked effect on the smooth running and power of the engine, and it is largely a matter of trial to obtain the correct pressure. If a domed piston is fitted, or the base of the cylinder ground down, the pressure is increased, but if the cylinder is raised by means of thick packing it is diminished. The raised compression may be needed for speed events, but with an old-type harsh-running engine the latter tip may be adopted to transform its running to a reasonable degree of smoothness.

D.J.H.

Makeshift Needle Valve.

HAVING lost the needle valve of an Amac carburetter during a roadside adjustment, a rider was helped out of the difficulty by T. C. of Pottersbury in the following way: A nipple was



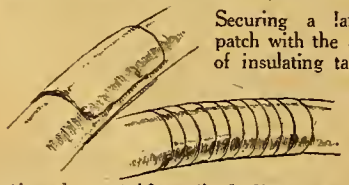
An impromptu carburetter repair.

screwed tightly on to a 17 gauge spoke, which was then cut off to the proper length. A groove for the float clip was cut with a small file, and the carburetter float chamber was quickly in working order again.

Repairing a Burst Tube.

HAVING suffered a badly burst inner tube, which required a repair patch almost encircling it, A. C., of Swanwick, found that the patch was difficult to apply, and that it persisted in lifting at the edges, permitting a leak.

Sticking the patch down as well as possible, the tube was blown up slightly and



Securing a large patch with the aid of insulating tape.

solutioned outside (including patch) about one inch beyond each end of the repair, and insulation tape was wrapped round and round the tube, each layer slightly overlapping, in puttee fashion. A final coat of solution was then rubbed in, and the tube inflated a little harder and left to set.

Refitting Chains.

TWO S-shaped meathooks, made from wire of small enough diameter to pass between the rollers, and with one end of each shortened, can be used effectively to join up chains which need a little stretching to bring the ends close enough together for the insertion of the joining link. The hooks are engaged in each end of the chain, pulled together, and held with the opened jaws of an adjustable spanner; by screwing up the latter the ends of the chain are drawn closely together.

Scott Sociable Hints.

USE Oildag for the gear box.

Run the tyres just so hard that they do not bump the rims, and no harder.

Switch off on down grades. This permits a fresh supply of oil to reach the top piston ring, which reduces any tendency in the direction of gumming in.

To obtain an easy start, avoid a rich mixture, especially when engine is hot. If the engine does not start immediately, open the compression taps and pump it empty, then try again.

Use *thin* grease for the grease cups, and give them a turn or two regularly.

Pump the hubs full of vaseline, and you can then leave them alone for months.

The radiator very seldom requires water, but this fact should not cause one to forget all about it.

To make the brakes fiercer, open the shoes slightly. This can be done by applying the pressure of the hands; to make them less fierce, close slightly. Do not use engine oil for the hubs, as it is apt to get on to the brake drums and prevent their gripping. For the same reason, do not over-oil rear bevel.

Acquire the habit of using the hand brake.

Clean the two-pole plugs every thousand miles or so. They are easily taken adrift.

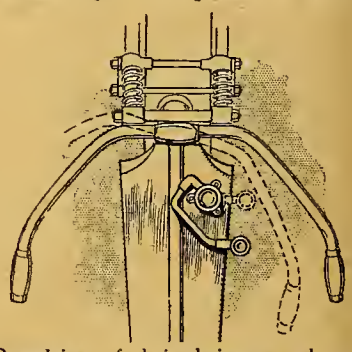
Do not use more engine oil than the makers recommend. It may seem absurdly little, but nothing is gained by using more.—H.M.B.

"HINTS AND TIPS FOR MOTOR CYCLISTS"—gives hundreds of useful "wrinkles." Price 2s. 3d. post free from "The Motor Cycle" Offices, Dorset House, Tudor Street, London, E.C. 4.

Facilitating Cornering.

NO new principle in the dynamics of steering is foreshadowed in the above heading; this paragraph merely refers to a little correction of the maker's design carried out by C.R., of Rugeley, on a machine that shall be nameless.

As originally fitted by the makers, the drip feed of C.R.'s machine was too far forward on the tank, and in consequence the handle-bar could not be turned very far to the right before colliding with the top of the drip. This continual collision bent the drip valve pin, and finally tore the pump out of the chimney in the tank. The pump was refixed one-third of a turn to the left, bringing the outlet facing forward, and a piece of brass pipe bent suitably in two places was screwed



Remedying a fault in design not unknown on modern machines.

into the pump delivery orifice and the drip feed screwed to the end, bringing it to the side of the tank but nearer the saddle. As the top tube of the frame is flush with the tank, the brass pipe lies snugly in place, and is reasonably unobtrusive, while the drip feed is still visible.

Belt Enthusiasts Please Note.

NO doubt cynical by long experience, S. T., of Somercotes, has equipped the top edge of his front number plate with a short hack-saw blade, fixed with two small screws through its end holes; it saves playing about with an inadequate penknife, cut fingers, and the

A novel use for a hack-saw blade.

cost of the oft-times inefficient but expensive belt guillotines, once so popular. When out of use, the blade is carried with its business edge downwards—which is something to be thankful for, at any rate.

GREATER VALUE than ever given before

A limited quantity of this wonderful boot for disposal to the readers of "The Motor Cycle" at

30% Less than any previously quoted prices

Every boot is brand new, Absolutely Waterproof, and easy to slip on and off. Far more serviceable than similar articles of vastly inferior materials sold elsewhere at equal prices.

THE INDICATOR WITH UNLIMITED SPEED READING

THE BONNIKSEN ISOCHRONOUS has long convinced the Scientific Rider of its unrivalled properties, viz.:—

It tells the truth at all speeds. Its hands are not confined to one turn on the dial; at 60 m.p.h. the hand will show 10 i.e. 50 plus 10.

Accurate because its "controlling mechanism" is same as in a watch.

No hand oscillation because the indicating hand is locked while reading.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, 1%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

Copy of letter received from:—

Wyheham Cottage,
West Grove, Hersham,
Walton-on-Thames.
22nd September, 1922.

Dear Sirs,

I beg to inform you that I was yesterday successful in an attempt with 3½ Douglas 494 c.c. and Sidecar, on the Class F 600 c.c. Records as follows:—

50 miles—64·13 m.p.h. World's Record, subject International approval.
100 miles—61·53 m.p.h. World's Record, subject International approval.
1 hour—63 miles 1586 yds. World's Record, subject International approval.
2 hours—120 miles 1297 yds. World's Records, subject International approval.
Subject A.C.U. confirmation.

Mr. Pullin supplied me with the Carb-Jectors fitted, which quietened and at the same time gave a very pleasing note.

Yours faithfully,
(Signed) J. EMERSON.

A.C.U. SIX DAYS TRIAL
3 Carb-Jectors entered, 3 Gold Medals.

Copy of letter received from:—

Messrs. Alldays & Onions Ltd.,
Matchless Works,
Birmingham.
September 18th, 1922.

Dear Sirs,

I am glad to report that the Carb-Jector Silencers fitted to the three "Allon" machines in the recent A.C.U. Six Days Trial gave every satisfaction.

In my opinion this Silencer on our machine gives off a tone that no one could reasonably take exception to, and as to the speed of the machines the results on Brooklands Track will show that even after Six Days' gruelling they were able to average 40 miles per hour, that is 5 miles per hour more than required.

Yours faithfully,
(Signed) R. E. CLULEE.

BRIDGEHEAD Ltd.,
Bankhey Works,
BLACKPOOL.

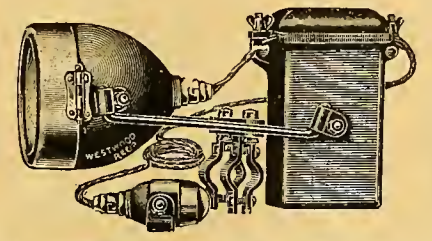
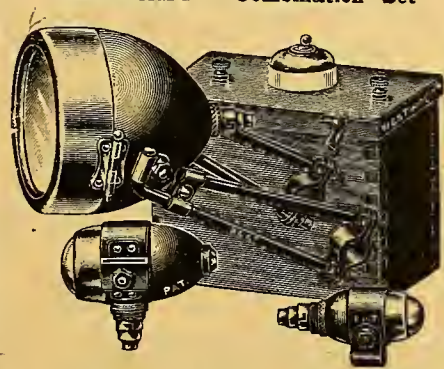
"DAYBEAM" Electric Solo Set



The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

Complete Outfit, List No. 30/1, Price £5 5 0

"DAYBEAM" Combination Set



The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting, and will give very satisfactory service in use.

Complete Outfits, List No. 30/2, Price £7 7 0

£5.—A.J.S. cycle set, C.A.V., running order.—Ellenger, "Wigwam," Victoria Rd., Maldon, Essex. [4763

20% POWER INCREASE This is what the new pattern cylinder gives a 2¾ h.p. Douglas. It has streamlined ports, and large radiating fins. My price per pair is only £5. Fit them to any old model Douglas and you'll really be surprised.

ADDITIONAL POWER may be obtained by fitting Special Lightweight Radiated Pistons, fitted with patented twin rings. They are simply wonderful, and every mail brings testimonials from all classes of satisfied riders. Price **29/-** per pair, complete with gudgeon, twin rings and copper caps.

PATENTED TWIN RINGS. The only really gas-tight and frictionless ring. Thousands have already been sold and not a single complaint. For 2¾ h.p. Douglas **1/6** each: 4 h.p. Douglas, Sunbeam, Humber, and Rover 77m/m bore, **1/8** each. B.S.A., Triumph (pre 1919), Rudge (pre 1921), Singer, New Hudson 3½ h.p., Precision 3½ h.p., L.M.C., 4 h.p., 85m/m, **1/9** each. Other makes quoted for on application.

WHY SUFFER BROKEN VALVES? My valves are guaranteed 12 months not to break, scale, or burn, and never really need grinding in. They cost more but the best is the cheapest in the long run. 4 h.p. Douglas **10/-**. 2¾ h.p. Douglas **9/-**, complete with special spring, collar and cotter. Other makes, Triumph, Rudge, A.B.C., etc., price **10/-** per valve.

A HANDY LUGGAGE CARRIER. For 4 h.p. Douglas Sidecars. Folds up neatly and is the same shape as the back of the sidecar when not in use. Light, strong, durable and fitted in 10 minutes. Price **30/- complete.**

AIR COOLED VALVE CAPS. My latest are covered by patents. They never blow out nor seize in the threads. Absolutely gas-tight. Prevent knocking and keep the engine cool. Try them on your 2¾ h.p. or 4 h.p. Douglas, and if you are not absolutely satisfied have your money back. Price **4/-** each.

ZOOM! ZOOM!! The popular Exhaust System. Beautifully made, finished in burnished nickel or copper. A pleasant Zooming note without back pressure. Adds pounds to the appearance of any Douglas. Price **30/-** in copper finish, **33/3** nickel.

LEATHER TOOL ROLL A real heavy affair that will stand rough usage. Fitted with leather pocket, two side flaps, leather centre tool holder and leather strap. **5/-** each.

TOOL BAGS. Solid Leather and Metal Armoured. Two straps. 4 h.p. size **10/-** each, 2¾ h.p. size **5/6** each. A bargain line.

THIS BEAUTIFULLY-SHAPED PAN SADDLE with adjustable springs gives you a low natural riding position and does not foul the sidecar stay. My price **25/-**. Usual price 35/-.

WRITE ME about anything you want; tell me your troubles and I will help you. I was 10 years with Douglas Motors, and know all about all their models. I am the only agent who sells the 55 m.p.h. 2¾ h.p. **DOUGLAS.** Cash or Terms. Any spare part by return of post.

The Paris Salon.

AT one time the motor cycle industries of France and England were closely allied, and the developments of one often influenced the other. This is hardly the case to-day. The British industry has continuously expanded, while motor cycle interests in France are still struggling to exist.

The Paris Salon, described on pages 515 to 522 of this issue, reveals no great progress over last year; in fact, manufacturers across the Channel appear to be making a fresh start in an endeavour to interest a new public rather than to cater for those who are already motor cyclists. We refer to the intense interest taken in the pedal-assisted bicycle, almost to the exclusion of the orthodox motor cycle.

Conditions in France are widely different from those prevailing in this country. The young Frenchman is not so thrifty as his English *confrère*; he rarely saves sufficient to purchase a motor cycle. Furthermore, the sport and pastime have fallen into disrepute, which is curiously accounted for by the war. A large number of war-worn machines were sold at a very low price, with the result that they got into the hands of a type of rider whose dress and behaviour disgusted the better class of pre-war motor cyclist. Thus, having lost the old motor cycling public and found a new *clientèle* that is undesirable, France has now turned to the pedal cyclist to provide an outlet for the products of her motor cycle factories.

Despite this state of affairs, we cannot but think that motor cycling in France will eventually return to popularity. The roads, although bad on the whole, are not all in such poor condition that motor cycle riding cannot be enjoyed.

Agents for British makes are naturally fettered by the adverse exchange, which keeps up prices to an inordinately high level. Our motor cycles are admired and appreciated by the French public, and in spite of all difficulties some British machines are sold.

Apparently the French are apathetic towards sidecars, for very few are exhibited at the Salon. The large number of small, low-priced cycle cars recently introduced is said to be responsible.

The few firms which seriously consider the possibilities of the motor cycle are producing machines closely following British lines.

Opposition to Amateur Race.

IT has been decided, since the I.O.M. authorities look favourably on the suggestion to close the Manx roads for three days next year instead of two, to run a sidecar T.T., but the proposal to hold an amateur race has already been turned down by the general committee of the A.C.U.

New objections have sprung up against an event for private owners. Last spring it was said that the time was too short to organise such a race, but that the idea had been sympathetically considered. Now it is considered that although the satisfactory definition of an amateur is not an insuperable difficulty, the enforcement of such a definition is beyond the powers of the ruling body. Reasons change, but the strange opposition continues.

Ordinary members of the A.C.U. cannot understand the position at all. They think, despite the fact that a trade-supported sidecar race will undoubtedly be a better financial proposition for the Union, that a most propitious opportunity has been lost of deciding once and for all whether an amateur race would be a success.

More will probably be heard of this policy of condemnation without trial of an event which might easily become one of the premier sporting fixtures of the year and a source of keen interest to thousands of motor cyclists.

An index to the advertisements in this issue will be found on the page facing the back cover.

Whew!

OUR Gallic cousins are boosting the cycle car for all they are worth. The latest French cycle car is intended to outsalmson the Salmson both in speed and price. Weight, under 6 cwt.; horse-power, 29, as attested by the French Club's laboratory over six hours' bench work. Engine, a vertical four-cylinder, with separate cylinders enclosed in an aluminium refrigerator, through which a blower passes the equivalent of the Brighton sea-front atmosphere in March once every hour. Five h.p. per cwt. is the outside edge of the absolute limit in power-weight ratios, and this cycle car will be formidable if it is built as well as it is designed. The British trade is at present leaving the cycle car market too much in the hands of small car firms, which look upwards to identify their competitors, instead of downwards. Let me say again that if air-cooling is to make permanently good in passenger work, it must be applied to engines equal in refinement to their water-cooled rivals.

One Toolbag.

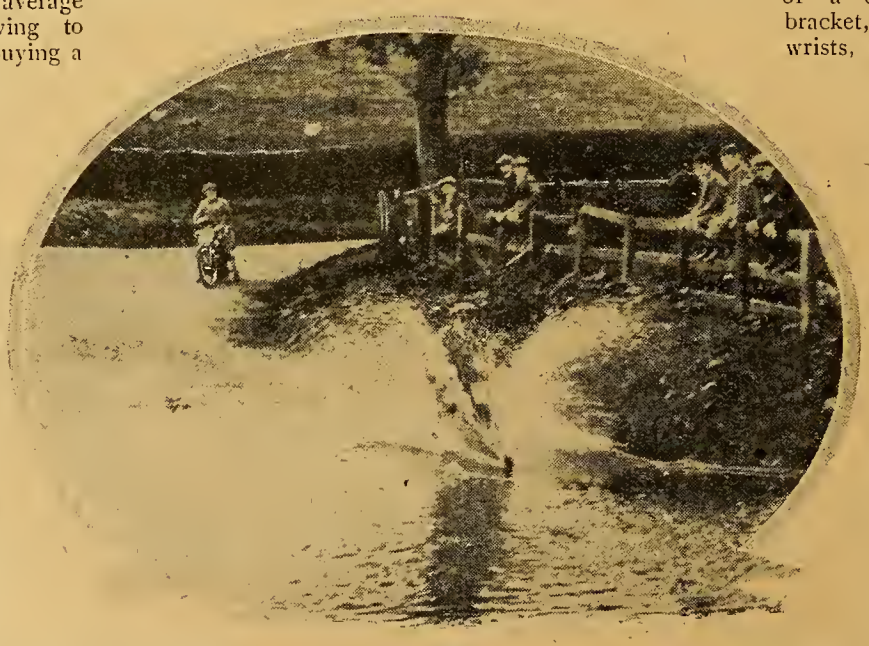
I ONCE owned a pal who made it a point of honour to carry all his kit in a military hairbrush case secured to the base of the front fork. Men of this kidney will despise me for suggesting that no sane rider can stow all he wants to carry in one small pannier bag, and that the average rider resents having to spend money on buying a second toolbag after he has put down eighty or ninety of the best for a new mount. But this week two friends of mine have taken delivery of single-toolbag machines. Moreover, in each case the free kit had been whittled down to suit the reduced accommodation, and the contents of the lonely little bag provoked vitriolic comparisons with the free kits presented by a generous trade with pushbikes. As readers have probably forgotten what kit goes with a new push-bike, let me explain that it consists of item, one teeny tin oilcan; item, an aertex duster; item, a stamped-out spanner, to fit all the nuts; item, a tyre repair kit (matchbox pattern). Well, these two motor cycles arrived with very little more than that; and their irate buyers had to lay out about 30s. apiece at the local garage next day.

Photographing Misery.

A PROPHET is not without honour save in his own country or until after he is dead. So for the nonce my friend Capt. Aston is merely regarded by an ungrateful nation as a genial journalist. When he is dead, some foreign body—the American edition of the S.M.M. & T. or the Automobile Club de France, maybe—will erect a life-size statue of solid platinum to his memory. Why? Certainly. He is the first man I have met who wants to clear up why one springing system is comfortable and another is uncomfortable. He does it so simply, too. He just hunts about till he finds a nice piece of road, disfigured by one solitary but pronounced bump or pothole. He waits for a moonless night, and sticks his large camera by the roadside with the shutter open. Then he straps numerous one-and-threepenny flash lamps to various parts of the motor; axle, body, and driver's cap in case of a car; hub, lamp-bracket, tank, driver's wrists, etc., in case of a bike. After passing the camera at various set speeds, he adjourns to his dark room

The Resultant Negative.

THE prints thus obtained depict a number of wavy white lines on a black ground. These lines add to the sum of human knowledge. For example, any motor cyclist who has owned a W—— machine, fitted with the X—— fork, is aware that this



NOT A MINIATURE HYDROPLANE. Alec Hill in the Harrogate M.C.C.'s President's Trophy Trial preferred this spectacular manner of crossing a splash to the more sedate, but probably surer, method of dropping into low gear.

Occasional Comments.—

combination represents the zenith of misery; whereas contrariwise, those lucky-folk who have sat on a Y—— machine equipped with the Z—— fork know that it feels like riding on whipped cream or rising dough. More than this, the rider cannot say. But Aston, after one intelligent squint at his ugly little negatives, can tell you exactly why the WX combination is so abominable. He dabs with his forefinger at the various sorts and sizes of waves, and discourses in terminology which makes my head ache. Happy thought; why does the A.C.U. not get Aston to award "comfort" marks in the next Six Days Trials. If 900 marks out of the 1,000 were awarded for comfort, and Aston and his staff were allowed to play about with the entry on Brooklands from 9 p.m. to 6 a.m. on the Friday, the trials would be of real service. Happy thonght No. 2: Why don't they put up that platinum statue to Aston while he is alive and could appreciate it? It would be a kindly thought to give him a replica for his own use.

Wounded to the Quick.

MY unkind remarks about the yellowing effect which many celluloid visors and screens have upon the landscape have provoked the Celastoid people to send me some sample panels of their white nonflam material. They admit that at present nobody can render this stuff scratchproof, though various patent revivers (amyl acetate for nitro-celluloid, or acetone for Celastoid) will soften the surface, which will then reset fairly smoothly. Their stuff is certainly white, and a peep through it doesn't suggest that the peeper needs a good dose of bismuth or a prairie oyster. But they will pardon me for saying that if the best nonflam celluloid obtainable is liable to scratch, and though white is only "cloudy-white," we have not reached finality. A good philosopher sees both sides of every case, so I hasten to add that glass is heavy and brittle. The output of Celastoid will shortly reach two tons per week, and is more than absorbed by the demand from car, sidecar, and aeroplane manufacturers.

NATURE'S COMPENSATION. It is a general, although not infallible, rule in Scotland that the more picturesque the scenery is, the worse are the roads.

More "Views."

"KUKLOS" of the *Daily News* has taken up with avidity our discussion of the loveliest views in Great Britain. As he publicly describes me as "gifted," I can't be rude to him, especially as the Editor says my only gifts are laziness and impertinence. But he makes it clear that, in his opinion, motor cyclists don't look at scenery, being far too much absorbed in their machines. He even quotes a Highgate novice who is returning to the push-bike, because his motor cycle compels him to concentrate overmuch on actual locomotion. It takes all sorts to make a world. In any Six Days Trials you will note men dismount at one of the more superb coigns of vantage in some gorgeous landscape, and, according to their temperament,

1. Damn the road surface.
2. Enquire where the next pub is.
3. Chaff the other competitors.
4. Abuse the officials.
5. Reminisce about their hard luck or fine riding.
6. Silently soak themselves in the scenery.

But I must snap a lance with "Kuklos" when he objects to my pen name as the most violently unsuitable I could have chosen. To quote his own words: "Ixion was a gentleman (thanks, gentle 'Kuklos'!) who for his sins was chained to a wheel and condemned to roll with it for ever." Exactly! Just how I feel when I set out on my umpteenth London-Exeter.

All things considered, however, the idea that motor cyclists do not see the scenery is one to be discountenanced. At everyday speeds one is far less concentrated on the road than the average cyclist, whose view in hilly districts is frequently limited to the top of his front tyre.

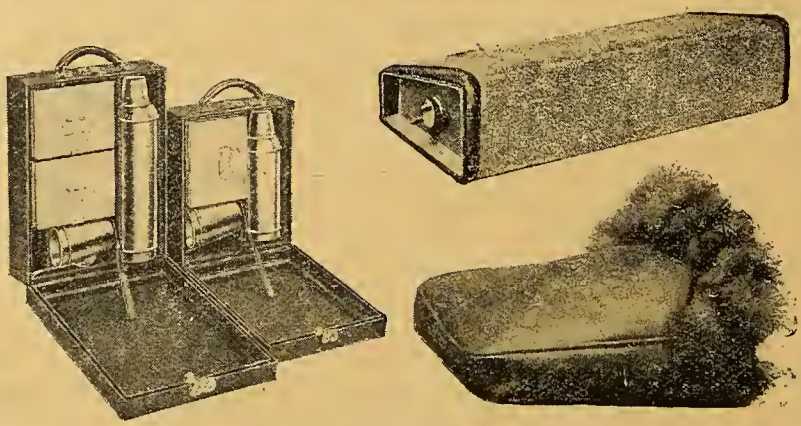
"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

The Passenger's Comfort

Making the Sidecar Cosy in Winter

By "FRIAR JOHN."

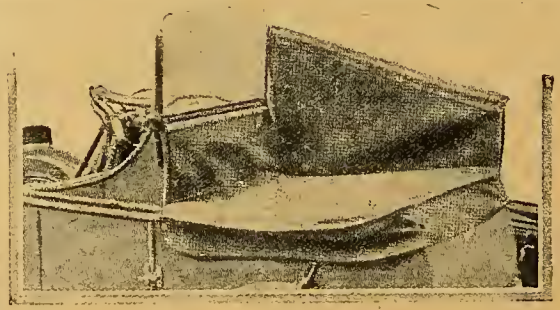
THE time of the year has arrived when special precautions have to be taken if sidecarring is to be thoroughly enjoyed. In our fickle climate the changeable summer weather is sufficiently disconcerting, but the lightning temperature changes of our autumn, when the midday may be tropical and the night bitterly cold, call for special thought on the part of the owner, especially if he sets out on a long journey with a passenger not accustomed to travelling. Motoring in a most expensive but badly equipped car can be a misery in bad weather, but an ill-equipped sidecar outfit driven against a wet wind from the north-east can kill all enthusiasm.

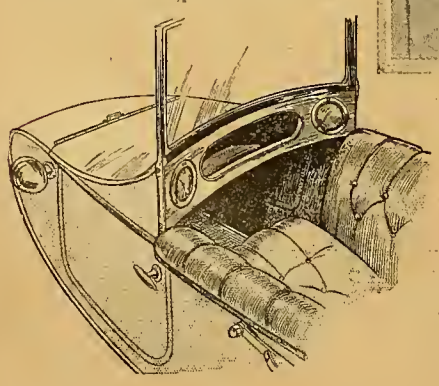


Sandwich and flask cases, footwarmer and loot-muff. Although these useful accessories are proprietary articles, in each case they can be replaced by home-made devices which answer the purpose very well.

No one but the most thoughtless and careless would, for instance, invite a passenger into a screenless sidecar either in summer or winter, although I am not quite sure whether a simple flat screen is not worse than no screen at all. The several marketed side-screens and the many ugly improvisations to be seen on the road only show that effective side-screening is one of the first and most important considerations in achieving comfort for the passenger. To counteract that deadly side-draught which is deflected from the body of the driver on to the face of the passenger should be the very first job for the considerate owner whose front screen is of the flat type. To suggest in detail how this simple improvisation may be carried out would be superfluous. The obvious thing is to select a workable material and fix the shield in a manner similar to one of the screens shown.

My next job if I were seeking to transform a bare and ordinary type of sidecar into something more comfortable would be to study the springing of the sidecar cushion. The standard system of body suspension cannot be altered easily, but the majority of spring cushions can be improved upon. I would at once scrap any existing spring seat and substitute an air cushion. Speaking from experience, I can confidently assert that no existing spring seat gives anything like the

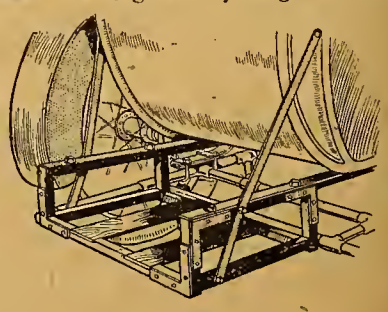


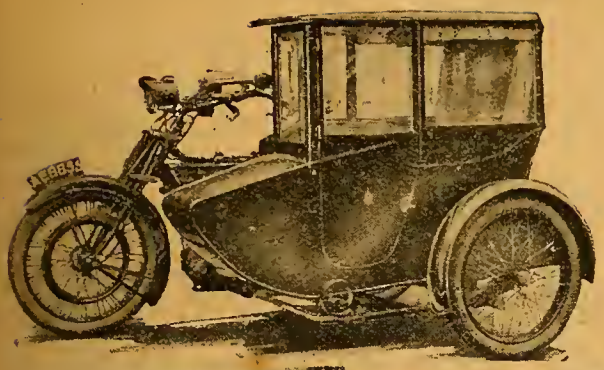


(Top) A sidescreen that prevents air currents being deflected from the driver's body on to the passenger's face.

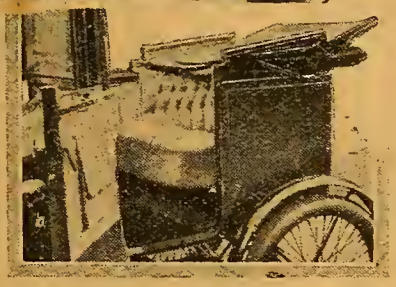
(Left) Fitting a little shelf in the dash similar to this one should be comparatively easy and all lady passengers appreciate such a fitment.

(Right) Instead of cumbering up the passenger with luggage a quite inexpensive grid may be made by anyone possessing the requisite tools and ingenuity.





This coupé top, which gives complete protection, was made by a reader, and it must be admitted the work has been done without giving a heavy or cumbersome appearance to the outfit.



Interior of a sidecar cabriolet complete with air cushion. The upholstery of Bedford cord gives an impression of luxury and comfort.

comfort of a pneumatic one. It lessens the sins of those sidecar makers whose sole thoughts would appear to have been anything and everything but the springing of their sidecar. The form of revenge I secretly harbour against such makers is to force them to ride at thirty miles an hour in one of their own bare, hard sidecars, say from Birmingham round about the Potteries district, then to London on to the Uxbridge Road, say from Ealing to Staines, and keep them at it all day long whilst I ride in a Rolls-Royce alongside. I know this is diabolic, but it would be just.

Fortunately I can think of several little sidecars which are as admirable as these black sheep are bad.

Extras that matter.

In conjunction with the air cushion, present your passenger with a small feather cushion also.

A hood may or may not be fitted; if a hood is carried, however, a useful tip for ladies who feel the cold and draughts at their backs is to pull up the hood slightly and fasten it in that position. With a good side-screen and this little device the passenger will feel completely snug and comfortable.

But there are still other little ideas that may be carried out which will further add to the comfort of sidecarring. Rugs are, of course, always thought of, but it does not follow that wrapping the feet in rugs will keep them warm, especially if the door fits badly; therefore nail strips of material inside the body to overlap the edges of the doorway to keep out the draughts. There are several foot-warmers on the market, but a couple of rubber hot-water bottles enclosed in some strong, loosely-woven material answers very well. A more elaborate idea is to carry the exhaust system through the sidecar body by a flexible tube, but I have had no experience of this and have heard and read of the idea more often than I have seen it carried out.

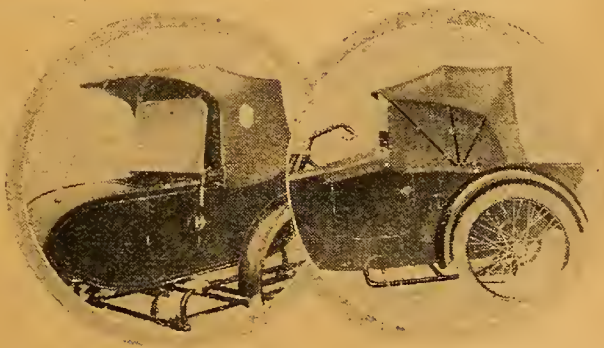
The other day I saw a capital contrivance made out of two or three lamb-skins of the cheaper sort—not the stuff that is so fashionable this winter for the trimming of ladies' coats. These cheap skins were modelled into a bag, and my lady slips her feet into it, sitting on the open end and allowing the top side to form a rug. It seemed worthy of emulation.

To carry still further the furnishing of the sidecar, a small locker can usually be fixed in the upper part of the sidecar nose or beneath the dash. In many instances this would be useless until the apron was removed, but in those cases it is quite possible to fix this very useful receptable—which usually contains the powder box and spare plug, looking-glass, and a patch or two—on the right-hand side of the body.

A unique position for the suit case. This hinged portion folds over the passenger's knees, yet leaves plenty of room in the body of the sidecar.

All the propositions mentioned, and even the fitting of bigger tyres, are quite practicable and can be carried out easily by the owner of any existing type of sidecar. The fitting of the largest possible tyres should certainly be considered. It is certain that scores of passengers tolerate uncomplainingly a sidecar that could, with little effort, be made very much more comfortable. The driver, probably a most considerate man, does not give a thought to draughts and cold feet, and takes the outfit exactly as fitted up by the makers. No wonder many women object to autumn and winter riding, whereas a little thought and energy would make them enthusiasts all the year round.

An original idea that gives good protection against strong wind.



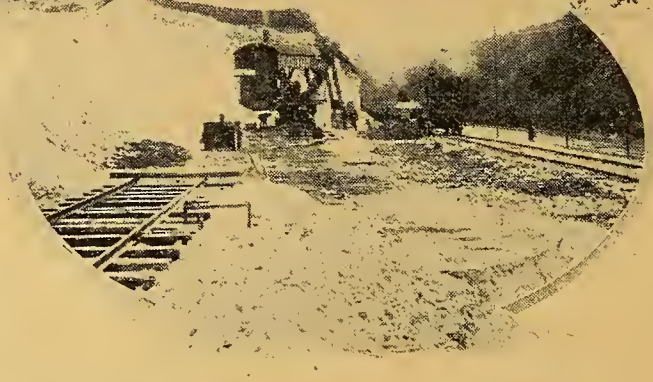
(Left) The effectiveness of this device is negatived by a screen obviously not designed in combination with the hood. Draughts can enter at the top and sides. (Right) A well fitting hood, screen and side curtain.

MAKING A MODERN HIGHWAY.

A Visit to the Section of the new London-Folkestone Road now under Construction.

Wrotham Hill, where the gradient is being eased and the road taken round the village.

A portion of the new road which will cut out the old narrow stretch through Ruxley.



One of the very few steam excavators at work. The greater portion of the excavating is done by manual labour.

A ROAD of romance, of real history and of legend is the London-Folkestone road.

Planned probably by our neolithic ancestors in the distant flint age, surveyed later by the Romans, and used no doubt as a military road even in those early days, this highway is steeped in poignant history. The imagination is stirred and stimulated at the mere thoughts of the stories which might be unfolded about this road since its beginning as a hill track and series of ridgeways, to the present time when monster excavators are biting out great mouthfuls of earth in obedience to our engineers' conception of what a modern road should be.

A portion of it, indeed, has been altered out of all recognition, and the old is giving way to the new. The spirit of utility presides over the gigantic undertaking, and romance flies from the old hedgerows and the quaint historic houses that are being elbowed out of the way for this great modern highway.

A Riddle of the Chalk.

Even the chalk is yielding up bones to conjure with, for a skeleton has been found which scientists have determined as being the remains of a Saxon invader. He was buried in a sitting position, had a hole in his skull before he was buried, and suffered from lumbago. It is an exquisite summing up, but probably quite correct. Bones do indeed reveal a lot.

The new road at present extends as far as Wrotham, about fourteen miles from London, so motor cyclists cannot hope to run down to the coast along this fine speedway for some time to come.

We recently had an opportunity of inspecting the new scheme in the company of Mr. W. D. Harding, A.M.I.C.E., Chief Engineer of Roads and Public Works, Ltd., the concern which has the work in hand between Farningham and Wrotham. He pointed out some of the difficulties encountered in cutting through chalk cliffs and filling up valleys, work which necessitated the handling of 160,000 tons of material, quite apart from the cartage of 150,000 tons for the preliminary operations. The drawings, too, needed for the work numbered over 400. In fact, the operations are very similar to those undertaken during the laying of a great railway track, and certain sections of the work give the appearance of deep railway cuttings more than they do of a highway in the making.

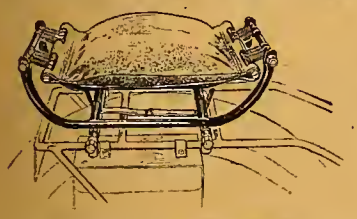
Setting a High Standard.

Here then can be seen what may be the commencement of great series of road operations all over the country. Modern transport demands drastic improvements in our highways, and in the London-Folkestone alteration a high standard has been set, from the point of view of both roadmaker and road-user. A standard so high, in fact, that one doubts the country's capacity to keep up the pace. But this section, together with a few other schemes round London, is a fine start, and for those motor cyclists who love these great naked-looking stretches of straight roadway, this addition will be a paradise.

Apart from its ultimate utility, the new road is justified in the provision which it makes for the employment of large numbers of men; with this in view excavating machinery is only sparingly employed.

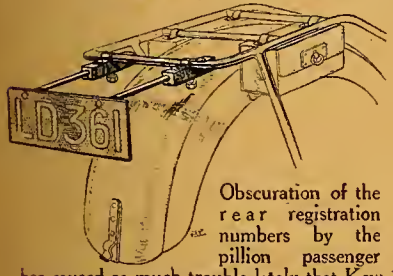
AMONG THE ACCESSORIES

Hammock-type Pillion Seat.



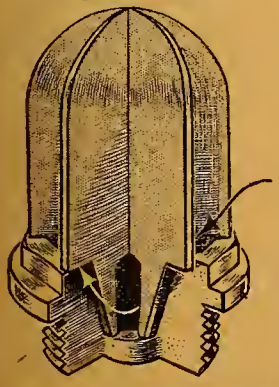
Several constructional improvements have been made in the Skiff pillion seat, which is both serviceable and simple. The cushion is suspended, hammock-fashion, on coil-springs, the recoil of which is checked by a strap. All carrier widths from 6 to 12 in. are available (The Tubular Gate Co., Ltd. Lord St., Southport.)

Overcoming a Pillion Difficulty.



Obscuration of the rear registration numbers by the pillion passenger has caused so much trouble lately that Kew Bros., 119, Higher Bridge St., Bolton, have protected an extensible rear-plate. 4s. 6d., post free.

Air-cooled Valve Cap Improvement.

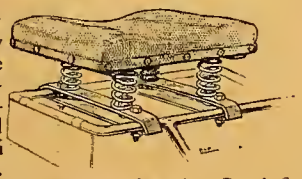


Study of valve cap radiators has led A. Altree (279, Wilmslow Road, Fallowfield Manchester) to the conclusion that improved cooling is gained by means of through air passages in the base.

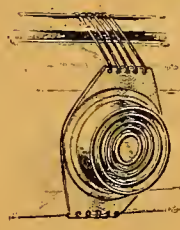
Ultra-Long Rubber Grips.

Exceptionally long and very comfortable handle-bar grips have been added to the range of John Bull specialities. 4s. per pair, including tape. (The Leicester Rubber Co. Ltd., Post Office Place, Leicester.)

Inexpensive Pillion Seat.



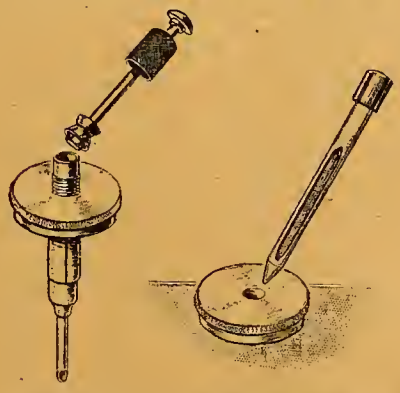
Excepting only the homely cushion, the limit in simplicity is probably reached in the Robini pillion seat. 14s. 6d. (The Robini Manufacturing Co., 1-3, Tulse Hill, Effra Rd., London, S.W.2.)



Sensible Knee-Grips from Italy.

Readily yielding and elastic rubber pads are commendable features of these Italian-made knee-grips. (Societa Anonima Allinovi Besana & C., 12, Via Vittoria, Milan, Italy.)

Primer or Gauge in Filler Cap.

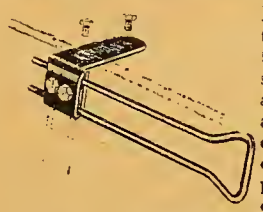


There is much to be said in favour of the idea of embodying such items as a petrol primer or a petrol level gauge in the tank filler cap. This has been done by Barracloughs Ltd., Thornton, Bradford, as shown, left and right respectively, the gauge being of the container pattern.

Springing the Rear Lamp.

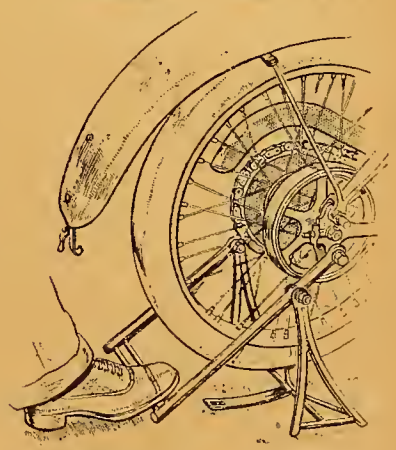
Whether electric or acetylene, rear lamps are always adversely affected by vibration; hence the Birt sprung bracket. 4s. (M. E. Birt, East Avenue, Cowley Road, Oxford.)

Neat and Simple Prop Stand.

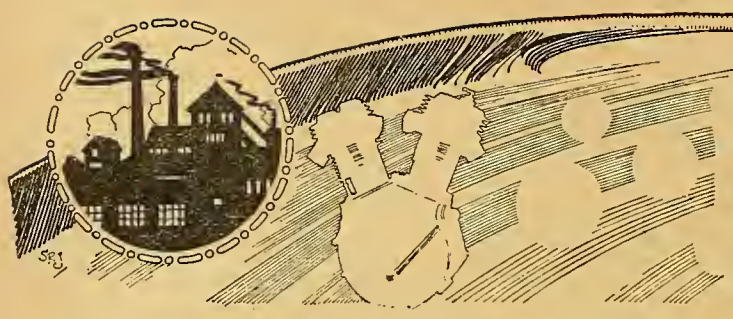


For attachment to a footboard, the Nipit prop-stand is adjustable in length and can be quickly locked or unlocked by pulling the prop outwards and rotating it. (Brown Bros. Ltd., Gt. Eastern St., London, E.C.2.)

Lever-assisted Rear Stand.



Much of the labour attendant on jacking up the rear of a heavy machine is eliminated by the Ford stand. An auxiliary member pivoted on the main stand comes into action first, when the foot pressure may be applied to the main cross-bar. When fully depressed the stand is automatically locked, and a simple toe-catch allows for its return. (R. Ford, 14, Coombe St., Stoke, Coventry.)



Castor Oil in Engine Lubrication.

Properties of Vegetable and Mineral Oils. Blending to meet Definite Requirements.

By E. A. EVANS, F.C.S., M.I.P.T.

FREQUENTLY the question is asked by motor cyclists: "Will castor oil damage my engine?"

To such a query no immediate answer can be given, for the reply must be modified by certain qualifications suggested by a general review of the principles of lubrication and the physical properties of oils.

Oils are chemical combinations of fatty acids and glycerol (glycerine). The differences which exist between the numerous oils are brought about by the various fatty acids combining with the glycerol to form individual glycerides, and these glycerides when mixed together give rise to the liquid and solid fats as we know them.

Some fatty acids are fluid, others are solid, at atmospheric temperature, whilst others may have any consistency between the two extremes, and each acid, when it combines with glycerol, produces a glyceride of definite melting point. The way in which olive oil remains fluid in the summer, but gradually deposits solid matter as winter progresses, is a manifestation of the presence of both liquid and solid glycerides in the oil. Hence it is that it is possible to supply oils of required cold test to meet specific needs.

The Fatty Acids.

Some of the fatty acids are particularly stable and belong to a class of compounds which are designated as "saturated." On the other hand, the unsaturated fatty acids may be affected by air, depending upon the temperature and period at which they are freely exposed, and so produce solid deposits or other decomposition products. It is commonly supposed that the degree of unsaturation is a measure of the instability of a glyceride or fatty acid, but this is not quite correct, because it is possible to stabilise an unsaturated body by introducing protective groups into it without reducing its unsaturation. In lubrication problems this consideration frequently arises.

There is yet another type of unsaturated acid, but this is one of special interest, because it contains a group, called a hydroxyl group, near to the point at which the unsaturation exists which lends properties of value. This acid is known as ricinoleic acid, and in combination with glycerol forms the chief component of castor oil.

Insolubility and High Viscosity.

Perhaps the most striking property of castor oil is that it is scarcely soluble in petrol, whilst other oils are completely soluble. For this property alone, if for no other, it is particularly valuable for petrol engine lubrication. It at once eliminates the source of complaint that the oil has become so thin that it has lost its body by the oil being reduced in viscosity through the admixture of unburnt fuel.

Another very valuable property of this unique oil is its abnormally high viscosity or its resistance to shearing stresses. By virtue of this it is capable of maintaining two moving surfaces apart when they are being forced together under considerable pressure. Further, it differs from most lubricants in being only very slightly compressible. This means that if a film of castor oil be compressed it will contract in volume to a very much less extent than would a pure mineral oil if subjected to an equally high pressure. The gravity of such an attribute is borne home when we realise that bearing surfaces are full of tiny crests and dips, and that the bearing pressure is carried on the crests and not on the dips, and as the portion of the bearing carrying the greatest pressure is narrow, the actual pressure on the crests in that narrow belt must of necessity be a great tax upon the oil to withstand it. One naturally wonders whether it is better to flood the lubricated part with oil or to limit the feed. Some people advise one thing and some another. Doubtless both advisers are right, but only when the conditions are different. This story is a long one and deserves separate attention.

Securing Maximum Lubrication.

For our purpose let us now assume that the only variable under consideration is the oil. To obtain the best lubrication the amount of oil passing at any one moment depends entirely upon the oil used, *e.g.*, speaking generally, the effective thickness of film of a mineral oil increases with the increase of viscosity or fluidity up to a certain feed, and if one exceeds this feed the lubrication is not so good; the limit, of course, varies with each oil used. With castor oil it is different—a thin film is as good as a thick film, consequently it is more economical to concentrate one's efforts upon obtaining a satisfactory thin film.

Castor oil is usually regarded as an expensive commodity used by the rich and the racing enthusiast. True as this may be, the less wealthy and the less enthusiastic are realising that lubrication is a vital factor in the efficiency of their engines, and are therefore rapidly being convinced by their own experience that a thin film of oil which will do its job is less

Castor Oil in Engine Lubrication.—

costly and troublesome than an oil which must be used in greater quantity.

Not only does this advanced practice in lubrication appeal to riders when considering the bearings, but perhaps in a greater measure if they have ever had a seized piston. As in the case of bearings so in the case of cylinder lubrication, a thin film only is necessary. If a thin film is sufficient the risk of excessive carbonisation is reduced, if only by virtue of the absence of oil to carbonise in the combustion space.

Objections to Castor Oil.

Although castor oil has some very decided advantages over mineral oils, it has a few objectionable properties, but they are not equal in all varieties of castor oil. Discussions have lately centred about the corrosive properties of castor, presumably due to its free fatty acid content. Corrosion can take place both with used castor oil and mineral oil if free fatty acids be present, especially in the presence of water. The action may be perceivable on copper, but hardly noticeable in the case of steel or cast-iron, except in very extreme cases. It is advisable, however, to remember that the aircraft specification of the British Engineering Standards Association states that the acidity shall not exceed 1.75% calculated as oleic acid.

Every lubricating oil known will produce solid decomposition products when subjected to a high temperature for a prolonged period in the presence of air, and castor oil is no exception. Carbonisation is another subject about which much ought to be told, but space limits me to the instruction "limit the feed and eliminate the carbon."

It is surprising how two words partly similar and partly dissimilar can be confused both when written and when pronounced. Yet it is so. The two words "castor" and "Castrol" are euphoniously and visibly different. The former is the name of a particular oil extracted from the castor oil plant which grows in the Tropics, and has certain characteristics which are peculiar to itself.

Castrol and Castor.

Castrol is a registered trade name adopted for a certain class of motor oils which contain castor oil. The idea being, of course, to impart to the mineral oil which is best suited for the various types of petrol engines the valuable properties of castor oil, and at the same time making an endeavour to eliminate the objectionable qualities. In some engines one cannot use such a viscous oil as castor, so a less viscous mineral oil is blended with castor. In other engines where castor oil could be used, but the rider will not reduce his feed as he ought, a suitable mineral oil is blended with castor to make a lubricant to suit the rider's propensities. Or it may be that the initial cost apparently eclipses the long-run economy.

The proportion of castor oil varies in Castrol. It should also be pointed out that Castrol "R," which is very much richer in castor oil than the other grades, is not a substitute for castor oil, but a competitor. It is essentially a proprietary article conforming to a definite quality. In this respect it differs from castor oil which may be pharmaceutical, firsts or seconds, but still the three classes are castor, and who except an expert in oils can discern to which class a particular sample belongs? This is a serious difficulty to the purchaser of castor oil.

WEIGHTS FOR REGISTRATION.

Definition of "Unladen Weight" by the Transport Ministry. Must Lamps be Included?

THE question of what exactly must be included with a motor cycle when it is weighed for registration purposes has aroused some controversy lately, and something approaching a definite ruling has at last been obtained.

Following is an extract from a circular letter, dated September 30th, 1922, by the Ministry of Transport to the local authorities :—

"Motor Cycles: Unladen Weight.—As regards the accessories under Section 7 (6) of the Roads Act, 1920, to be included in the unladen weight of a motor cycle, it is considered that the applicant for a licence can properly be required to include—

(1) Head lamp and generator.
(2) Horn.
(3) Number plates.
(4) Sidecar attachment lugs if permanently fitted to the motor cycle;

and that the applicant is entitled to remove—

(1) Rear lamp and generator.
(2) Mirror.
(3) Tool bag.
(4) Badge.
(5) Sidecar attachment lugs if fitted to sidecar.
(6) Oil and petrol in tanks.

"The general principle on which the above division is arrived at is that the articles to be included in the unladen weight are ordinarily used with the vehicle when working on a road. The rear lamp is included in the second list because a licensee is not compelled to have an illuminated rear number plate unless the vehicle exceeds 3 cwt. (R.B. 1712)."

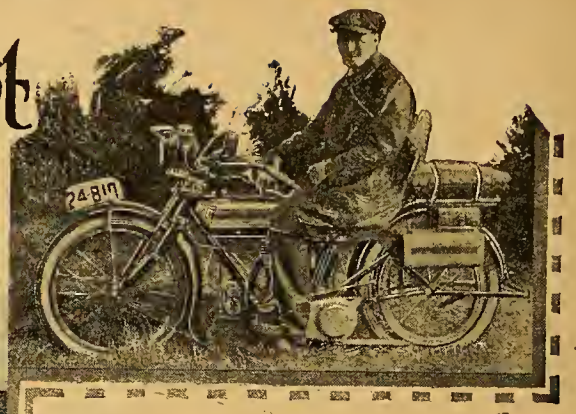
In consequence many local authorities have insisted on a headlamp being fitted to a machine before it is weighed; and the A.C.U. has got into communication with the Minister of Transport on the subject. His reply is appended :—

"With reference to the suggestion made in your letter that many owners of vehicles do not desire to use them at night and consequently these vehicles are not provided with lamps, I am to state that it is considered that such cases are very unusual and exceptional. If, however, in fact, such a case occurs, the Minister agrees that a lamp need not be acquired and affixed for ascertainment of unladen weight."

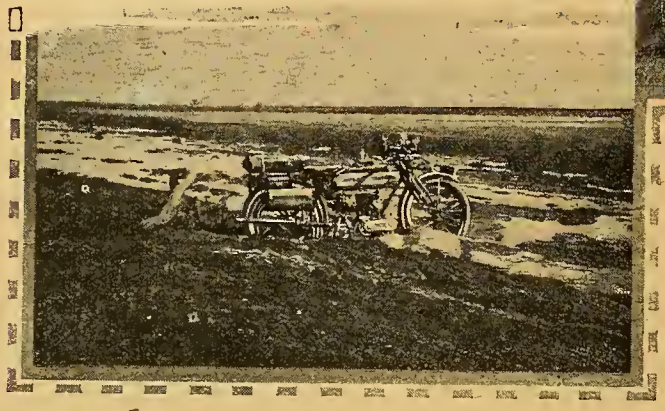
It remains to be seen whether the local authorities will recognise the supplementary recommendation. The qualification that "it is considered that such cases are very unusual and exceptional" may prove a stumbling block, for it should be pointed out that the Ministry of Transport cannot give a legal ruling on a point of this nature, although the courts generally follow the interpretation of the department concerned.

It has been estimated that 25 per cent. of the motor cycles in this country are not fitted with lamps, and that 20 per cent. of motor cyclists use their machines only in the daytime.

Into the Heart of Australia



The author and his Triumph on which he accomplished tour of 2,573 miles across Australian bush and plains.



Showing the nature of the country through which the author travelled. The name of the district—Nevertire—where this black soil area commences is certainly appropriate.

2,500 Miles across Three States. The Thrill of Pioneering.

THE writer's object in taking, last April, a trip across Australia was not to accomplish a motor cycle stunt, but mainly to see what real Australia consisted of, and life as it is lived far from the maddening crowds of the great cities..

From a motor cyclist's point of view, however, a description of the roads that were met with may interest more than notes on the character of the people and country.

On leaving Sydney just after Easter, New South Wales was experiencing one of the heaviest rainstorms of the year, and consequently the roads between Sydney and Mt. Victoria on the Blue Mountains were no joy, but from Mt. Victoria to Orange was easier, despite the wet weather. Incidentally, an inch and a half of rain fell during the 60 miles between Molong and Wellington.

On the Edge of Uncertainty.

Accordingly two days were spent at the latter town awaiting a change in the weather conditions before attempting to cross the Western Plains. Eventually the rain gave way to a good, drying southerly wind, so a start was made for Nyngan —135 miles. All went well until Narromine was reached, where I stopped for fuel. There several motor enthusiasts gathered round, and a hot discussion went on as to whether I could get through the Black Soil or not. Some were undecided, others held pessimistic views, but as the day was still young I decided to have a shot at it. Beyond Narromine all attempt to make roads had ceased. I was out on a dead level plain where the track is perfectly straight and level for 100 miles. At Trangie the dust created by wheat carting had developed into a slippery film of mud, and at Mullengudgery I struck the real Black Soil. None but those who have experienced it can realise how it loves you when it is wet. Inevitably I got wedged into it. Getting off, I tried to push the machine through, but to my surprise found it was stuck fast, and could not be moved backwards or forwards.

No Need for a Stand!

The photograph will help to illustrate to some extent the condition of things. Note that the stand is not down; the machine is simply sticking up in the mud to such an extent that it was utterly impossible to get either of the wheels to turn. I had to lift it out one end at a time, which took over half-an-hour. Some little time afterwards I passed a motor cycle and also a car stuck in the mud—both abandoned.

The sun began to sink in the west, and everything pointed to spending night on the Black Soil Plains; but, having only some 20 miles still to go, I decided to ride for it. Fortunately by this time I had learned how to ride over black soil when wet.

Arriving safely at Cobar, I had my tanks filled ready for an early start next morning to cross No-Man's-Land.

Leaving at 6 a.m., I had 180 miles to span between there

This illustration conveys a good idea of the grey Western Plains of Victoria. In the distance are the Grampian Mountains.

Into the Heart of Australia.—

and Wilcannia on the Darling. The road strikes due west from Cobar, out into the great lonely, empty west, across undulating country consisting of red clay and sand hills covered with thick, scrubby, stunted trees. Mile after mile of this vast empty land unwound without disclosing a single living thing in the shape of animal life. In fact, all I came in contact with during that 180 miles of water-washed gutters and sand hills were two sheep, a few galahs, and a man with a horse and cart mending one of the endless number of gates that are across the road.

In this part of the country the term "cut-line" is used instead of road, which simply means a clearance about four chains wide through the trees, perfectly straight as far as the eye can see—like an avenue to eternity.

At 3 o'clock that afternoon a long line of green gum trees loomed in view, which proved to be my objective, and at 3.30 I shot across the great white bridge that spans the Darling at Wilcannia.

The Last Police Station.

Next day I made for White Cliffs, the one-time famous opal diggings, from where most of the world's opals have come; it lies some 60 miles north-west of Wilcannia.

Some few miles out of Wilcannia a road leads in the direction of a red, stony, desert plain. This is the road to the dead heart of Australia, along which Wright guided Burke and Wills when crossing Australia in 1860 on their way to Cooper's Creek.

White Cliffs is the farthest out-back town in New South Wales. It contains the last public school and the last police station. There I got some interesting snaps of camel teams, etc., and life as it is lived on the fringe of the Empire.

The West is a region of mystery, which seems to be associated with all countries bordering on desert lands. Great dust-storms were experienced; mirages were common, and the nights deadly silent.

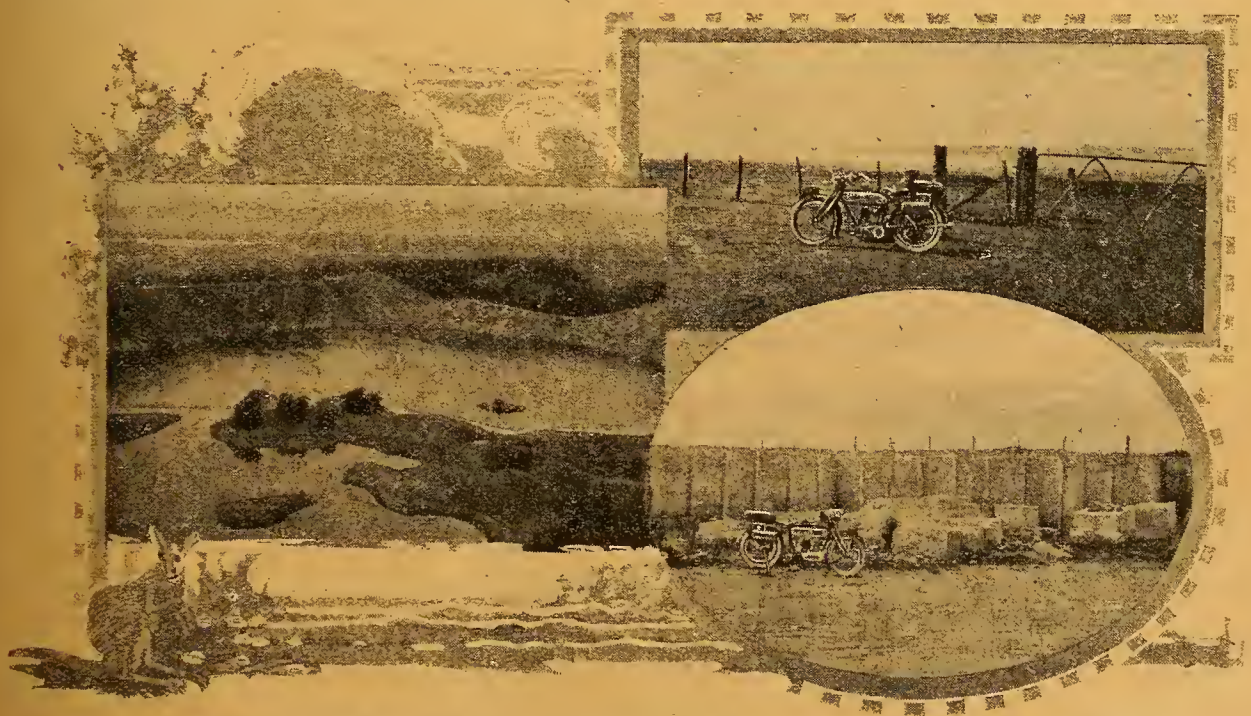
Better Going off the Roads.

Slipping away next morning just as the sun was peeping over the snow-white opal fields, a fine sight that there was no time to admire, I commenced the journey of 180 miles of unknown road to Broken Hill.

The sand on this stage was particularly trying, as it extended for miles without a break; and I reverted to the camel pads (the tracks that the camel trains follow). They provide good going, but they do not follow the cut-line always, and one has to be careful that he is not led away to some outlying station.

I anticipated that when I got to Broken Hill good roads would prevail to Adelaide. Greatly to my surprise they were if anything worse than those I had just traversed. There was still 220 miles of bush road to be tracked, with no recognised place of accommodation on the way. I made for Lilidale Station—127 miles—and experienced some of the roughest roads I have ever been over.

Presenting myself for accommodation at the station, I was treated most handsomely, and next morning was greatly assisted by the station people, who supplied me with a sketch map of how to avoid a boggy creek some few miles further on. I had to ride for miles without even a track to follow, through salt bush, myall, gidgea, mulga and tobacco bush scrub, with only the fences of huge paddocks as a guide. There, too, I rode into great herds of



(Left). One of the largest craters on Mount Gambion, South Australia. (Top). Where monotony reigns—the road across the plain from Broken Hill. (Bottom). A contrast to the desert country—a stone quarry in South Australia.

Into the Heart of Australia.—

kangaroos and emus. Eventually I reached and crossed the deep sandy creek. Feeling rather anxious as regards my direction, I took my bearings from the sun, made across a wide open plain, and found Gum Tree Tank, where I again struck the track as marked on the station sketch map.

A few more hours through salt bush country brought me into the Burrow-Burrow copper mining district at Kooringa in South Australia.

From the Burrow into Adelaide—130 miles—one passes through the great wine-making district of South Australia. Dotted amongst the thousands of acres of vines are the beautiful white-painted, well-kept vineries. Along their roofs, shining in the bright sun, in big black letters are the names of some of Australia's most famous wines. Through this picturesque district winds a beautiful white limestone road, so different from the rutty, boggy, sand-ridged western tracks.

From Adelaide over Mt. Lofty across the Murray Valley and down to Meningie on Lake Albert is 93 miles of really good going. To Kingston, through the Coorong, where some of the most "desperate" road in the whole country exists, is nothing but pure sea sand with limestone rocks sticking through it.

From Kingston through Ballarat, Bendigo, Murchison, Albury to Picton all kinds of roads were encountered, but from Picton into Sydney they were found to be in a uniformly deplorable state.

19 m.p.h. throughout.

In conclusion, a word or two is due to my machine, a W.D. Triumph fitted with two extra petrol tanks—one on each side of the carrier—holding a gallon each. When the three tanks are full I can span 300 miles, allowing 90 miles to the gallon—easily done on moderately good roads. In addition to this, 3in. Rail-Road Dunlop tyres were fitted.

I was 23 days covering 2,573 miles, the shortest stage being 15 miles, the longest 257, averaging 112½ miles per day. A note of each day's running time and mileage was kept, 19 m.p.h. being averaged throughout.

G. W. H.

DATA FOR SPEED MEN.

Interesting Figures provided by Half-distance Timing in Scottish Speed Trials.

IN the provision of really complete results sheets of speed events no club excels the Scottish Western M.C.C.

Immediately after an event each competitor is supplied with a detailed schedule of the times, speeds and formula figures of merit of every rider who crossed the starting line.

At the most recent speed trials of the club, already described in *The Motor Cycle*, a further innovation was made: times were taken at half distance as well as for the full half-mile. Timing, of course, was electrical; and, although to avoid interfering with the first timing strip the actual start was ten feet to the rear, the times in effect are those for a standing-start quarter-mile followed by a flying-start quarter-mile.

Below are some of the speeds:—

	1st quarter mile.	2nd quarter mile.	Full distance.
	m.p.h.	m.p.h.	m.p.h.
600 c.c. Solo.			
J. A. Porter (348 New Gerrard) ...	61.1	75.4	67.3
J. B. Longmuir (492 Sunbeam)	61.8	73.9	66.7
R. M. Wilson (349 A.J.S.)	59.7	74.3	65.9
E. A. Small (492 Sunbeam)	60.0	73.2	65.9
J. B. King (490 Norton)	57.2	75.0	64.8
Unlimited Solo.			
J. A. Porter (696 New Gerrard) ...	69.3	76.3	72.5
J. S. D. Price (738 Martinsyde) ...	61.1	75.1	67.2
R. Watson (738 Martinsyde)	61.1	74.3	66.9
J. B. Longmuir (492 Sunbeam)	62.6	71.7	66.8
R. M. Wilson (349 A.J.S.)	59.3	75.4	66.4
J. Lloyd (492 Sunbeam)	60.0	73.6	66.0
E. A. Small (492 Sunbeam)	59.3	72.8	65.3
J. B. King (490 Norton)	56.3	74.4	64.0

It will be observed that in the 600 c.c. class Porter's 348 c.c. New Gerrard was slower over the first quarter-mile than Longmuir's long-stroke Sunbeam, yet the former was 2 m.p.h. faster towards the finish Although 350 c.c. engines favour "revving," it would hardly be justifiable, since Porter won his class, to say that his machine was over-geared. Most probably the Sunbeam was under-geared, a conclusion borne out by the speeds of the A.J.S. that was third, which also was faster than the Sunbeam on its second quarter-mile. By the same reasoning, it might be assumed that King's Norton was over-geared.

The unlimited class is even more interesting. The first three machines are probably each capable of approximately the same maximum speed, but the New Gerrard was 8 m.p.h. faster over the standing-start half-mile. The President of the Club who sends us the figures suggests that Porter was under-geared; but again, since he won, the suggestion hardly seems warranted. Had he employed a higher ratio there is no practical, apart from theoretical, reason for supposing that he would have been appreciably faster on the second quarter-mile. Apparently Porter gained his speed by stupendous acceleration. Incidentally his speed for the standing half-mile—72.5 m.p.h.—beats Remington's record speed on a 998 c.c. Blackburne—71.88 m.p.h.—for a standing kilometre at Brooklands.

Reverting to the Glasgow tables, it will be noted that Wilson's A.J.S. and King's Norton respectively are only 1 and 2 m.p.h. slower than the New Gerrard over the second portion, yet their full distance speeds are 6 and 8½ m.p.h. slower. Longmuir's Sunbeam, which we have already accused of being under-geared, seems to have dropped two places owing to the lack of a high enough maximum speed; but again, it may be retorted that he beat four faster men by his superior acceleration, which shows that it is not safe for outsiders to generalise on the matter.

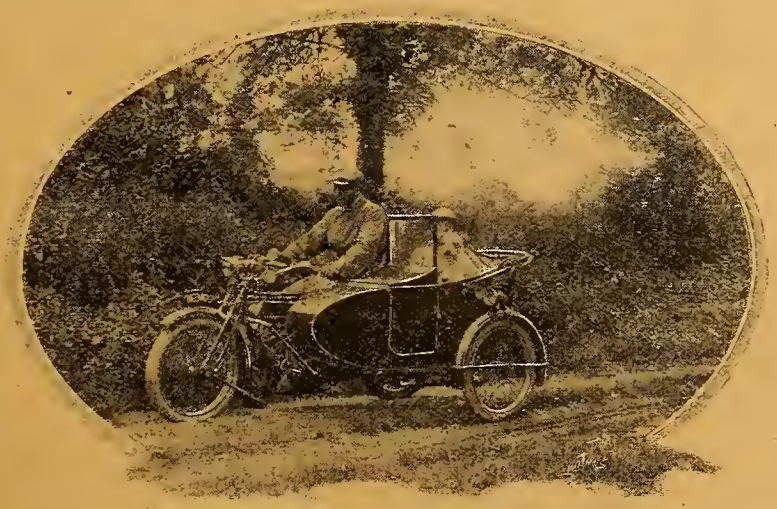
Road Tests of New Models

The Four-cylinder F.N. Sidecar Outfit.

SPECIFICATION.		
ENGINE: Four-cylinder (52 × 88 mm. = 748 c.c.).	*TRANSMISSION: Shaft and bevel.*	*TYRES: 26 × 3 in.*
GEAR BOX: Three-speed.	*WEIGHT: 300 lb.*	*PRICE: Solo, £125.*
	CARBURETTER: Amac.	*Sidecar, £160.*

JUST as Great Britain had the honour of turning out the first six-cylinder motor car, so to Belgium must be given the credit of rendering the first four-cylinder motor cycle a marketable proposition. The F.N. motor cycle made its appearance in 1905 and has been manufactured steadily ever since, the first four-cylinder machine designed (in England, by General Holden) being only sold in limited quantities.

A trial of the F.N. was particularly interesting to the writer, for he has followed its development from the time when it had automatic inlet valves and no gear, through the period when it had a two-speed gear, when, in 1914, it was completely modernised, with mechanically-operated side-by-side valves, a three-speed gear box and a plate clutch, to the present model, which has overhead inlet valves. It has been improved out of all recognition; and, although the 1922-23 F.N. is not in the sports model category, it is capable of commendably high average speeds.



Neat sidecar design characterises the quiet running F.N. outfit.

Our first acquaintance with the machine was on the occasion of the finish of the Six Days Trials, when necessity compelled us to make two ascents of the Brooklands test hill, which naturally were accomplished on first speed but required a very slight throttle opening. Since that date numerous journeys have been made, mostly over average roads, and the behaviour of the outfit on the 1 in 4 section of the test hill proved but an appetiser of its power and capabilities generally for going anywhere.

Take, for example, the hill between Welwyn and Woolmer Green, which is approached by a curve that is never safe to take too fast. Laden with a heavy passenger, the machine ascended comfortably on top gear.

Speed on the level, as already indicated, is all that can be desired, and it seems that the vehicle will hold its own with any outfit of a similar cylinder capacity.

No difficulty was experienced as regards starting; the "take up" of the

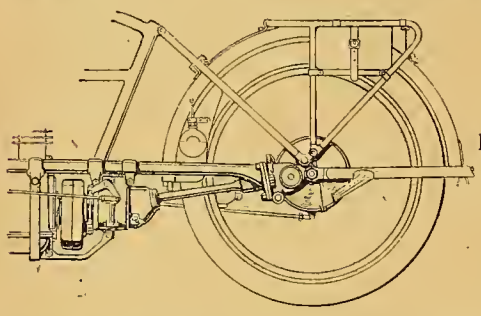
Road Tests of New Models.—

plate clutch was exceedingly smooth; and the steering left nothing to be desired.

Throughout, the machine is thoroughly well designed, so that not only is it efficient but also it possesses thoroughly up-to-date features, such as a really well-carried out mechanical oiling system, a neat inspection plate to the gear box, and a very nicely thought-out cover to the universal joint.

Minor Criticisms.

However, one or two easily remediable details call for criticism. It is hard to understand why, after having an excellent single lever carburetter of their own manufacture in 1914, the makers should elect to use one of the two-lever variety in 1922; it certainly detracts from the flexibility of the engine. It is also strange that



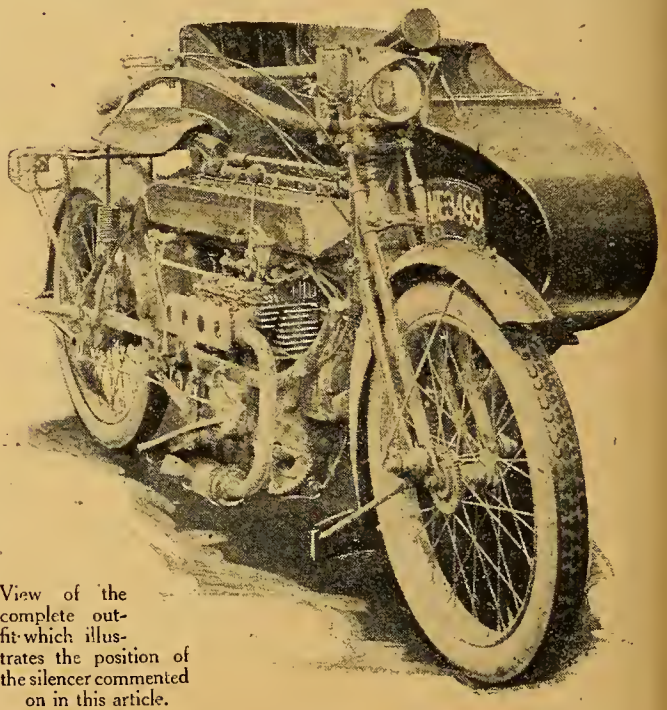
Layout of the shaft drive.

the outlet of the silencer should be underneath the off-side footboard so that the exhaust fumes and exhaust noise are unduly noticeable.

Probably due to the machine placed at our disposal having had a hard season's use and not a few honours to its credit in various important trials, the bevel was rather more noisy than might have been, and it would also appear that the balance of the engine at high speeds is capable of slight improvement. The mudguards, too, appeared to be rather small for the large section tyres fitted.

Were attention paid to the small items mentioned, the F.N. sidecar outfit would be very nearly ideal. Flexibility and smooth running are the true attributes of the four-cylinder, while the weatherproof, no-trouble transmission in itself is worth a great deal.

Made at a gigantic factory, renowned for good workmanship and excellent material, the F.N. has a reputation for longevity second to none.



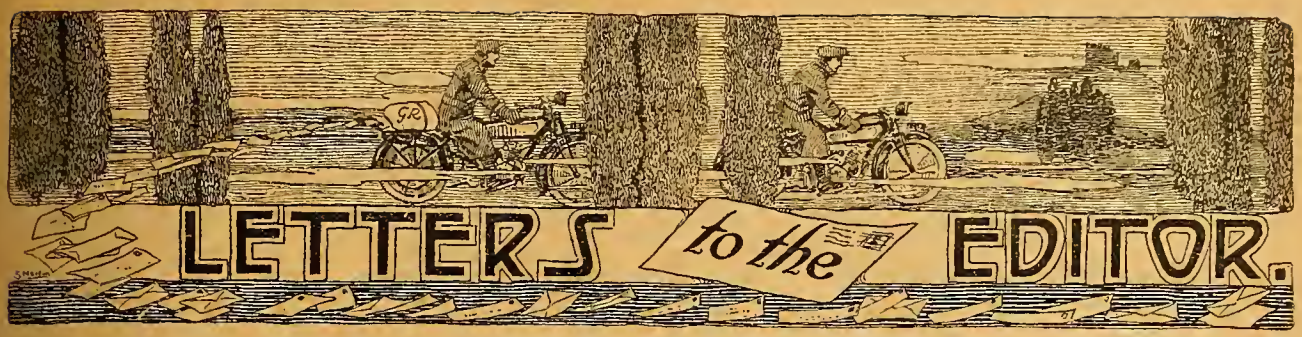
View of the complete outfit which illustrates the position of the silencer commented on in this article.

NEED FOR HIGHWAY RESTORATION.

RECENT fatal accidents in which the heavier varieties of motor vehicles were involved have brought into prominence the question of rendering the roads of Great Britain more suitable for the traffic which they are nowadays generally called upon to carry.

Roads, as they are to-day (says *The Autocar*), were planned for traffic that existed at the time they were made. Originally, in many cases, so far as the main traffic routes are concerned, they were laid over open expanses of country, and were wisely provided with wide margins on either side for such purposes as the driving of sheep and cattle from place to place, for riding on horseback, and that travellers might not be attacked unawares by bandits. At a later period a movement followed for the enclosure of waste lands, and as a result roadside wastes were encroached upon to such an extent that the highways in most places became tortuous and hemmed in by the enclosing fences. These conditions were not found to be dangerous until less than a century ago, when, in the palmy days of the stage coach, the roads were found to be too restricted and inconvenient. A number of improvements were undertaken to make them suitable for the continually increasing volume, weight, and speed of the vehicular traffic they were called upon to carry.

This movement for improved roads would, no doubt, have continued to advance had it not been for the introduction of the steam locomotive. The all-powerful horse and stage coach interests of that day successfully resisted the introduction of the steam coach upon the public roads by passing through Parliament the Red Flag Act, which made it compulsory for any locomotive driven on the public highway to have a man walking in front carrying a red flag. Mechanical traffic was driven off the public roads on to railways, which were developed for its reception. It is conceivable that, except for this shortsighted policy, horsed traffic and mechanically propelled vehicles might both have retained their places on the roads and jointly brought about improvements which would have made the roads suitable for modern developments in motor transport.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address

ENCOURAGED BY A TRIALS PERFORMANCE.

Sir,—It was the performance of a similar machine in the London to Edinburgh Trial that encouraged me to undertake a recent most successful journey from Edinburgh to Worthing and back on a 225 c.c. Enfield two-stroke.

Hence trials are of some value to the public after all.

Edinburgh. H. W.

SO-CALLED EASY PAYMENTS.

Sir,—Col. Le Mesurier has done well to call attention to the so-called "easy payments" of some firms and the high rate of interest which is really charged. He is in some cases much under the mark. Take a recent advertisement :—

Cash price £99.
Deposit £27 5s. 6d.
12 monthly instalments of £7.

Now in instalments the buyer will pay back £84. That is—taking deposit from cash price—he will pay £12 5s. 6d. interest for the loan of £71 14s. 6d. for six months, as the amount gets less each month. This comes to somewhere near 17 %. Not a bad rate, especially when one considers that if the instalment plan were not adopted the machine would probably be unsold for a year and no interest be accruing. SHYLOCK.

Barnsley.

THE CHARM OF THE 1,000 c.c. SOLO MOUNT.

Sir,—I notice with pleasure that you are taking up the cause of the big twin enthusiast, but I also notice a paragraph in which you mention the high speeds obtainable from 250—350 c.c. machines.

How many of these high speed lightweights are actually in ordinary users' hands? I have never met any so far, and consider that the majority of ordinary 350 c.c. machines are not up to the standard of performance of even an old 500 c.c. single; and, should one of their riders ever try a solo big twin, whatever his opinions may have been previously, he is a certain enthusiast for the 1,000 c.c. machine ever after.

G. ROSEKILLY.

DEAF MOTOR CYCLISTS.

Sir,—I have driven a sidecar outfit for the last three years, and although for all practical purposes stone deaf, I have never found my affliction any inconvenience or danger to myself or to other motorists, provided that the following simple precautions are always strictly observed :—

Always ride well on the near side of the road.

Always take blind corners or cross roads at a crawl.

Never pull out to pass anything until you are sure there is no danger from front or rear.

Look continually in the mirror to watch for overtaking cars.

To sum up. Use your eyes instead of your ears.

I consider that there would be far fewer accidents if all motorists, deaf and sound, trusted more to their eyes and less to their ears. AFFLICTED.

London, W.1.

"40,000 MILES WITHOUT DECARBONISING."

Sir,—I submit that the A.C.U. should form a Society for the Prevention of Cruelty to Engines. EVERY 500.

Manchester.

CRASH HELMETS FOR LADIES.

Sir,—Why was it that all the male competitors were compelled to wear "crash helmets" in the Scarborough speed trials, and the ladies were not?

Manchester. "ONE WHO WAS THERE!"

THE FINEST SOLO MACHINES.

Sir,—After holding a discussion amongst my friends I have formulated the following list of machines which, in our opinion, are the first, second, and third best standard solo machines in each class :—

1,000 c.c. class ...	"S.S. 80" Brough-Superior-Jap.
	Super-sports Matchless-Jap.
	Super-sports Zenith-Jap.
750 c.c. class ...	733 c.c. o.h.v. Douglas.
	"Quick-Six" Martinsyde.
	80 m.p.h. Coventry Victor.
500 c.c. class ...	Long-stroke Sunbeam.
	o.h.v. Douglas.
	Scott Squirrel.
350 c.c. class ...	o.h.v. Massey-Blackburne.
	o.h.v. Sheffield Henderson.
	o.h.v. Cotton-Blackburne.
250 c.c. class ...	249 c.c. Coventry Eagle-Jap
	249 c.c. New Imperial-Jap.
	249 c.c. Diamond-Jap.

I would also like to send you a list of the worst machines in each class, but I dare not: my life is too valuable!

WARWICK. ANUBIS.

LARGE TYRES ON SMALL MACHINES.

Sir,—The idea seems prevalent that a big tyre rolls a great deal. Now this theory is discounted, to our minds, by the unanimous opinion we get about "the super-steadiness of our machines" from those who ride them.

We have made no mention of the comfort derived from the use of large tyres. "It is simply stupendous," says one rider; another, "comfort for motor cyclists has never been known unless they have ridden a machine so equipped."

There is also another great feature in favour of large tyres, and that is the long life of the cover, its freedom from trouble, and its power to overcome obstacles which would cause its more "anæmic" brothers distress.

It has been indisputably proved that the loss of speed, except in short sprints, is negligible, and many of our Brooklands record men use the large section cover.

However, we think that the small tyre has had its day; we feel that a general change over is imminent, and that soon we may see the 250 c.c. machines fitted with 26×3in. tyres, and the larger classes *pro rata*. This step would spell the doom of the spring frame for medium weight solo riding.

BERT HOULDING, Works Director,
THE MATADOR MOTOR CYCLE CO., LTD.

HUMIDITY AND POWER OUTPUT.

Sir,—With reference to "Enquirer's" letter I would like to offer an explanation as to why his machine gets into its wonderful stride "in the dusk of a dewy evening."

To commence with, the efficiency of the charge taken into the cylinder of his engine (or any other; this applies to any I.C. engine) depends upon its weight per volume. In the middle of the day the air is warmer and so more rarified than is the case in the evening, when the atmosphere tends to become humid and so heavier. At night a denser mixture is drawn into the cylinder, resulting in (1) a more violent explosion and (2) a greater expansion of the gases following it, from which more power is derived.

May I also add for "Enquirer's" attention that the engine most to be desired is the one possessing the highest volumetric efficiency, together with the greatest turbulence of the gases immediately before they are fired, and in my opinion no appreciable benefit would result in facing the air intake to the front of the machine. M. B. B. H.

Letchworth.

WHERE THE MINIATURE FAILS.

Sir,—It appears that small engines will be much to the fore next year; the "350's" have already obtained alarming speeds on the track, and now engines of 150 c.c. are advocated.

While admitting that small engines may be very highly developed, they must depend on "revs" for their speed and will not, one supposes, have the power to propel the large frames, saddles, and petrol tanks that one is now accustomed to. Therefore, these items will decrease in size proportionately until we get something like a 100 c.c. engine with push bike saddle, light frame, miniature tank, and lightly sprung. While this will no doubt prove an excellent vehicle to run errands on and go for an occasional 50 mile run, it appears to be nothing more than reverting to our old push bike days; half the pleasures of the present day mount and its capabilities will be absent soon, and we may even be driven to light cars for our motoring. XL-2948.

London, W.2.

FUEL CONSUMPTION ON A BIG SINGLE.

Sir,—"Triumph" (Batley) doubts Mr. A. D. Harper's 127 m.p.g. on his 550 c.c. Triumph; he states his petrol consumption is 60 to 70 m.p.g. I presume they both rode solo.

What will he say to the following? Mine is a 1918 standard Triumph, with the standard carburetter. It is fitted with the heaviest sidecar and chassis ever known (chassis tubing is ⅛in. thick) and a large windscreen.

Recently, with immense camping out gear, quite equal to an extra passenger, and with my son in the saddle and myself in the sidecar (so loaded I could scarcely get in it), we started from Liverpool and went *via* Chester, Shrewsbury, Gloucester, Bath, Wells, Cheddar (partly up the Gorge), and Bristol back to Liverpool in 4½ days (distance about 500 miles). The next week my two sons, with even more equipment, went from here through Chester, Worcester, Gloucester, Bristol, Minehead, Porlock, Lynmouth, Lynton, Ilfracombe, Taunton, Bristol, and home in five days (distance about 550 miles). The petrol consumption was 84.6 m.p.g. This is very carefully worked out and cannot be doubted. The only trouble experienced was a burnt-out exhaust valve, due to climbing Porlock and Lynton Hills.

ARTHUR E. LEE.

Sir,—I do not doubt that Mr. A. D. Harper can get 127 m.p.g. on his solo Triumph.

During the tests of numerous machines I organised in April last I found that similar makes of machine differed as regards petrol consumption by as much as 40 m.p.g. Each engine appears to require a definite quantity of fuel to drive it a given distance at a given speed. "Triumph's" 60 to 70 m.p.g. solo is certainly very poor showing, and I would suggest that he has the machine examined to see if there isn't something amiss. At 20 m.p.h., with my chain-driven 1922 Triumph outfit (Gloria sidecar), 3 up, I have done 76 m.p.g. At 25 m.p.h. average (touching 40 occasionally and 35 m.p.h. for a few miles) with 3 adults up I generally average 60 to 63 m.p.g. I have tried six makes of carburetter and nearly all the economisers, and the figures given are the best I can do. H. S. B. BOOTH.

WHY?

Sir,—I notice in your issue of September 14th a letter entitled "Why?". I should like to ask a few more questions. I am a Colonial, and have had a fair amount of experience of touring in Victoria and southern New South Wales. I should like to purchase an English machine to take back with me, but so far have seen nothing to come within miles of an Indian Scout.

Why do not English manufacturers build motor cycles instead of two-cat power sewing machines? I have not seen anyone riding a big twin solo since I arrived. If English manufacturers want to capture our trade they will have to build stronger frames and larger tyres.

Why do all English machines have the saddle nearly over the back wheel? I rode a four-cylinder Henderson for some time, and it was the most comfortable thing I had ever been on; the saddle was just about half way between front and back wheels. Give me a long wheelbase for comfort every time. I have never noticed any increased tendency to skid.

Why is the transmission on all English machines so terribly crude? The latest type of enclosed chain as fitted to the Triumphs and other makes is fairly silent, but the whole principle of chain drive to the countershaft is antediluvian. For the past six years, excepting a short interval when I had a Henderson, I have ridden 678 c.c. J.A.P.s, with Colonial frames and Brampton forks, and I have never been stuck up by fork or engine yet. I do not hit the high spots at 60 or 70 m.p.h., but I always keep up an average of over 30 on the roughest of country roads, which means as you know, a speed of close on 50 over the good parts. For the past three years I have had a Sturmey-Archer box, and in spite of every sort of ill use it has never turned me down. Still the chain to the countershaft makes, and always did make, a noise like a chaffcutter.

W. H. MOULE.

HOME-BUILT FRONT DRIVE THREE-WHEELER.

Sir,—My three-wheeled cycle car has the driving and steering-wheel in front, a four-speed and reverse friction drive, and a 6 h.p. engine. The entire machine (barring back wheels and back axle) has been built by myself in my spare time.

The body is three-ply, the bonnet only being metal. The machine can be braked hard enough to lock the wheel (the brakes being, foot brake on front wheel, and hand brake on countershaft), when it will skid forward in a perfectly straight line until it comes to rest. It feels far more stable than the conventional three-wheeler, owing no doubt to being pulled, instead of being pushed. The friction discs are both 12in. diameter—cast iron for the driver; compressed cork face on the driven. The body is light blue grey, with black guards. A Ford silencer makes the machine very quiet. The front cover is 700×80 mm.; the rear 650×65 mm.

The chassis is of English oak with steel plating from front to rear springs.

I have not yet experienced wheel spin, as all the weight is on the driving wheel. Incidentally the car weighs about 6 cwt., without passengers, and has taken about six months of my spare time to build. A. E. FOULGER.

Front wheel driving and steering has given every satisfaction on this home-made three-wheeler described in the letter from Mr. A. E. Foulger.

CANCELLATION OF CLUB EVENTS.

Sir,—"Fed-up" refers to a competition organised by him, where seven entries were received from 130 members. That points to one of two things: indifference of members to competitive events, or indifferent organisation of the competition in question. Since, at a hill-climb of the club in question, some 60 entries were received, the latter suggestion appears to be the cause.

He mentions that of the seven entries there were two committee men, two *bona fide* club members, and three "pot-hunters." This prompts me to wonder what is his distinction between a pot-hunter and a *bona fide* club member. Obviously both must be members of the club in order to compete in its events. Having a shrewd suspicion that I am numbered amongst the three pot-hunters, I ask, why should I not be a pot-hunter?

It is to be presumed that any competitor enters an event because he hopes that he may win, and I do not think that there would be much support for competitive events with no awards.

Why do people ride in competitions? Either because they are private owners and wish to prove their capabilities or else because they are connected with the trade and wish their riding to be an advertisement. To my mind either is a legitimate object, and both might be termed pot-hunters.

My reason for wishing to win is that my firm deals in second-hand machines, and it falls to my lot to drive in competition machines taken from our sale stock. In common with any manufacturer, the more wins the better the advertisement. That is pot-hunting, but is it any more so than the private entrant, who wishes to win merely for his own private satisfaction?

E. C. GORDON
(Peter Gordon, Ltd.).

THE ETHICS OF "HANGING-ON."

Sir,—Mr. James R. Thorpe takes it for granted that the average motor cyclist does not fear a crash involving a cyclist, as the odds would be so much against the latter. This seems to me to be a very good reason why he should fear such a collision, and if he takes note of the erratic riding and lack of road sense of so many young cyclists at least, he is likely to regard any rider of a pedal cycle with suspicion.

An experience of my own might not be out of place. I was returning from a short run, and when passing a side turning a schoolboy on a bicycle shot out and caught me amidships. The only damage, fortunately, was a buckled front wheel on the bicycle, and while we were trying to straighten this out the young criminal cheerfully admitted it was his own fault, as he could not stop, *having no brakes*. On further enquiry he informed me he regulated the speed downhill by putting his foot on the front tyre, but had not thought it necessary in this case, as "nobody ever passed that hill."

To come to the point. If motor cycles are required by law to have two brakes in addition to the considerable braking power of the engine, it is only logic that on free-wheel bicycles the use of at least one brake should be enforced.

K. G.
Liverpool.

Sir,—"Benedict" draws some very unreasonable comparisons with walking couples, etc., and apparently has not heard of the fellowship of the open road. Neither does he realise that circumstances alter things, and that I advocated "tucking in" *within reason*.

If a sidecarring couple must not be approached, even for the briefest interval, I suggest that they exhibit a special sign. Possibly the London Safety First Council would oblige with an appropriate design. I certainly agree that it *is* very rude of a stranger to thrust his nose down the neck of B.'s wife, but think that the easiest solution would be for "Benedict" to have a sidecar of usual design, and remove his wife from the grave dangers to which she is now exposed. That this gentleman can be in ignorance of the proximity of a "banger-on" is a mystery. Surely his passenger instantly warns him—even to ensure personal comfort only.

The loose insinuations that "these people" have nothing but abuse in response to polite requests are indicative of prejudice, and the statements regarding speed and forces of resistance, sheer ignorance. Has "Benedict" ever heard of that considerable item—Tractive Resistance?

In conclusion, may I suggest that to remove his wife from the contact of a mere cyclist's nose "Benedict" should speed up for a short distance and save his temper and "tear" gas.

JAMES R. THORPE.

Sir,—As an ex-cycle speedman, and a present motorist who drives Lancia and Crossley cars and a solo motor cycle, it gives me great pleasure to endorse the remarks of Mr. A. C. Godfrey and Mr. James R. Thorpe.

For years I have practically lived my life on the road we all treasure so highly, and did not drop the furious pedalling part of it until a cartilage caused me to motor all the time.

However, I might say that the ease and extra speed derived from pace-following, which, I hold, troubles the motorist, whatever he be, not a jot, is a great boon to the cyclist, to whom wind-resistance remains always the great obstacle.

More camaraderie on the road between classes would be for the mutual benefit of all road lovers.

Burnley. UBIQUE.

WIRELESS FOR MOTOR CYCLISTS.

Sir,—"A.J.'s" suggestion in your issue of September 28th for a sidecar passenger to converse with the driver by means of wireless when travelling, is interesting, but is he serious? Why bother with a wireless set, with its delicate crystal or valve, in addition to—as "A.J." suggests—a dynamo to supply the current? Why not an ordinary telephone set and two dry cells?

Does "A.J." realise that the noise he mentions which prevents the passenger from hearing the driver would also be collected by the transmitters and served up into the receivers in a concentrated form?

Has "A.J." realised also that wireless telephony under present practice necessitates an earth return, and that when cyclists are travelling, and would wish to converse by this means, they would be insulated electrically from earth except on a very wet road?

I think the practically noiseless machine will come along before wireless telephony for cyclists when travelling is a practical proposition.

A. P.
Darlington.

SUMMARY OF CORRESPONDENCE.

In reply to "Trusty Triumph's" letter, which invited verification by local readers, on 40,000 miles without decarbonisation, "H.D." (Iron Acton) asks, among other things, if the extra special spirit that gives his engine such staying power is supplied by the Cross Hands or the White Hart.

Books & Maps for Motor Cyclists.
Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook of the motor cycle.
Price net, 2/6. By post, 2/10.

"TWO-STROKE MOTOR CYCLES."
Second Edition. Just Published.
Price net, 2/6. By post, 2/9.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."
Fifth Edition. Just Published. Price net, 2/-. By post, 2/3.

"MOTOR CYCLE REMINISCENCES."
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CURRENT CHAT

Time to Light Lamps

Oct.	12th	5.43 p.m.
„	14th	5.39 „
„	16th	5.35 „
„	18th	5.31 „

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Pointers to Parking Places.

Owing to the large number of prosecutions for obstruction, the Teignmouth magistrates have asked the Urban Council to put notices on the sea-front acquainting motorists of parking places in the neighbourhood.

Standard Specification for Motor Spirit.

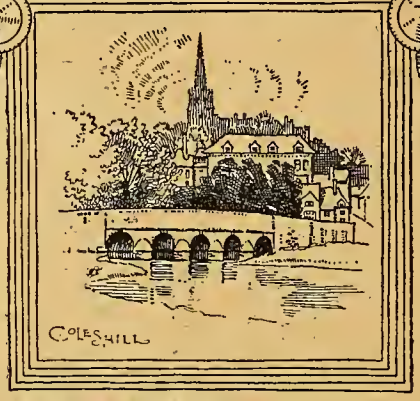
At the instance of the A.A. and M.U., the British Engineering Standards Association has taken up the subject of standard purchasing specifications for motor spirit, and a representative committee has been appointed.

99 m.p.h. Belgian Record.

Rossi, the Motosacoche rider who made such a splendid performance in the Monte Bré hill climb, broke the 500 c.c. flying km. record in the Belgian speed trials at 145.160 km.p.h. (90.7 m.p.h.), also making the fastest time of the day.

The Missing Sidecar Wheel.

The mystery of the disappearance of a sidecar wheel, when the spindle broke on the Gloucester-Bristol road, reported in our columns of last week, has been solved. After being advertised for locally for nearly a week after its loss, it was reported in the possession of a farm hand, who found it, the next morning, three fields away from the road, at a point approximately level with the spot at which it left the outfit. It appears to have bounded across country in a curving track, and it is remarkable that it should have passed the first field, which had wheat standing in stooks.



A Floating Mobile Garage.

A well-known Belgian yachtsman has had built a hundred-foot motor yacht which embodies a garage for his motor cycle and sidecar.

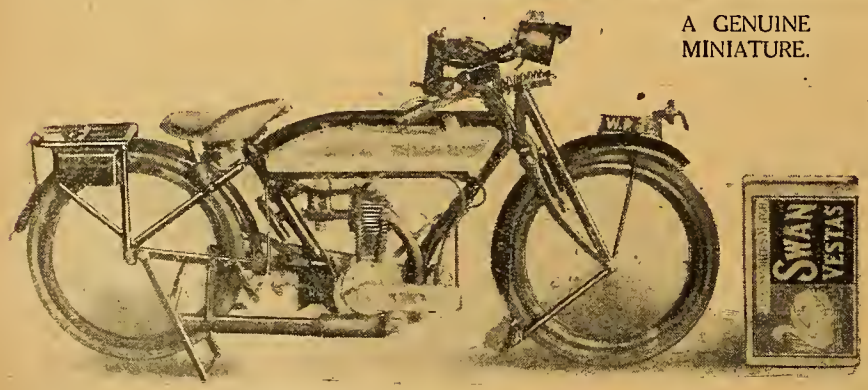
SMALL CAR PROGRESS'ON

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday 4d.

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.



A GENUINE MINIATURE.

DECEPTIVE. Were it not for the box of matches photographed alongside, the picture of this clever little one-seventh scale model would pass for one of the full-size Triumph which it represents. The model is the work of Mr. W. G. Pepperell, of Salisbury.

Special Features

THE PARIS SALON.
INTO THE HEART OF AUSTRALIA.

Distinguished A.C.U. Life Member.

Mr. George Bernard Shaw is a life member of the A.C.U., which he first joined in 1912 as the owner of a Lea-Francis motor cycle.

An Elusive Rattle.

An elusive and annoying rattle which manifested itself on a new machine was traced to an extremely small item of equipment—the catch designed to hold down the handle of the Best and Lloyd pump.

Final Brooklands Meeting.

October 21st, will see the last Brooklands meeting of the year, when, as is customary, the various championships will be decided. Incidentally, the car world borrowed this idea, at the recent Essex Club event. Since all the championships are scratch races, a good day's sport should be assured; the programme is a long one, commencing at 11 a.m.

Furious Calculation.

Pulled up by a policeman in Gosforth, Newcastle-on-Tyne, a reader was informed that he had covered 200 yards in 17 seconds, which worked out at 27.5 m.p.h. Let us hope the accuracy of the timing was not on a par with the mathematics of the man in blue.

Variations in Petrol Prices.

Revisions of petrol prices in England are not accompanied by strictly proportionate reductions for other parts of the British Isles. In Scotland 1d., in the Isle of Man 2½d., in Ireland 3½d., in the Channel Isles (excluding Guernsey) 4½d., and in Guernsey 5½d. must be added to the new prices ruling in England, which of course are 2s. per gallon for No. 1 grade and 2s. 4d. for Aviation.

Topical Discussions at I.A.E. Meetings.

Four meetings of the Institute of Automobile Engineers are being held during October, and at two of them, at the Railway Hotel, Coventry, on the 24th, at 7.30 p.m., and at the Assembly Room, Education Offices, Salford, Manchester, on the 18th, at 7.30 p.m., a paper entitled "The Light Car and the Motor Cycle and Sidecar Compared" will be read by Mr. W. H. Hingston.

An Ulster Grand Prix.

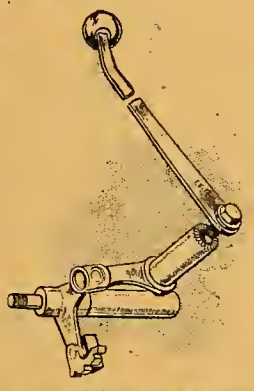
There will be a big motor cycle road race in Ulster on Saturday the 14th inst. Called the Ulster Grand Prix, it will be fully open to English and Scottish riders, of whom it is hoped many will participate. Permission has been obtained to close the roads on a very suitable twenty-one mile circuit, starting and finishing near Antrim, which will be covered seven times, 147 miles in all.

GEAR BOX WEIGHING 14½ lbs.

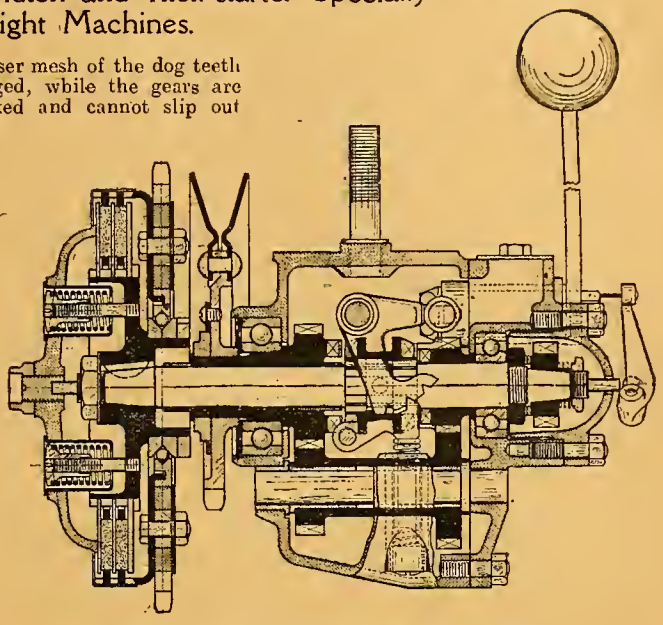
New Two-speed Burman Gear with Clutch and Kick-starter Specially Designed for Lightweight Machines.

ONE of the most popular gear boxes now on the market is the Burman three-speed, which is best known in two sizes—for heavy sidecars and for the lighter 500 c.c. machines. In view of the popularity of small machines it has now been decided to market a two-speed gear with clutch and kick-starter suitable for 350 c.c. two-strokes or 250 c.c. four-strokes.

External view of the new two-speed box.



Details of the striking mechanism which makes use of a universal joint.



Section of the box, showing the gear locating quadrant and spring loaded pawl.

This little box, complete with all controls weighs no more than 14½ lb., and is beautifully constructed in all its details. The main shaft runs on ball bearings throughout, with a very long plain spigot bearing, while the lay-shaft is stationary, the two lay-shaft wheels rotating on plain bushes.

Both ratios are engaged by means of dog clutches, the dogs, which slide on splines, being unusual in that they are slightly tapered instead of being undercut. This feature facilitates changing and permits a closer mesh of the dog teeth when fully engaged, while the gears are permanently locked and cannot slip out of engagement owing to a special Burman internal locking quadrant. The change speed lever is attached to a shaft engaging through a universal joint with a bell crank forming a tooth quadrant at its lower end; this quadrant is located by a spring controlled pawl and carries close to its lower end a steel block engaging with the recess in the dog member.

Kick-starter and clutch details.

A separate pair of wheels is used for the kick-starter, and some slight modifications in the attachment of the kick-starter pedal to the spindle have been carried out. As might be expected, the Burman system of rectangular cork clutch plates has been retained; there are two friction plates and three pressers, the whole being forced together by a series of light coil springs. Rubber shock absorbers are introduced into the mounting of the driven primary sprocket on to the clutch plate.

The box may be obtained for either final chain or belt drive and the detail work throughout is both excellent and practical. A large filler hole in a convenient position is provided for lubricant; and the gear lever is serrated like its shaft so that it may be set at any angle to suit the rider.

SUCCESSFUL WORKS TRIAL.

SPORTING events organised by motor firms are rapidly gaining popularity throughout the country, and it is not surprising that a reliability trial, held on September 28th by the Cambridge firm of Herbert Robinson, Ltd., aroused much interest in the district.

The organisers intended that the trial should be a test of reliability, but should form, in addition, a pleasant social run for the firm's employees and their friends, and in this they succeeded admirably. The course chosen was a comparatively easy one, sixty-three miles in length, which had to be covered at the usual schedule of 20 m.p.h., but without the aid of speedometers; two fairly stiff observed hills were included.

Prizes were won by motor cycle competitors as follows:—

Second prize: B. Haines (Douglas), 15 marks lost.

Fourth prize: O. Clark (Humber sc.), 17 marks lost.

LOSS TO SPORT IN SOUTH WALES.

COMPETITION circles in South Wales were heavily hit last week, writes Dr. A. Lindsay, well-known rider and A.C.U. Consul. Two accidents, a fatal aeroplane crash at Swansea, and a crash in the Aberdare M.C.C. speed trials at Penderyn, have lost the district its leading two big-twin experts.

P. F. Bush, the victim of the aeroplane accident, was a very capable Harley-Davidson rider, and won the 50 mile race at Pendine on Whit Monday comfortably. He was an extremely good rider, and handled his big machine like a two-stroke lightweight. Personally we had many tussles—the score was about evens, I think. He was a thorough sportsman, and certainly will be missed very much.

Another big-twin expert.

Handel Davies, S. Wales's Brough Superior exponent, met with a very serious crash at Penderyn. Travelling at about 80 m.p.h. his machine left the road at a corner, and hit a nearby heap of road metal.

Davies sustained two fractured arms and a fractured thigh, apart from other minor injuries, and lies in a critical condition in Aberdare General Hospital. I am afraid that his competition days are finished. An expert rider, rather prone to recklessness, his absence from competitions would be felt in S. Wales.

DERBY TRACK READY NEXT YEAR.

Concreting Operations Started. Further Details of the Layout and Accommodation. Not Intended to Compete with Brooklands.

SOONER than most people expected, England will have a saucer racing track comparable in every way with the American type of "speed-drome."

As already exclusively announced in *The Motor Cycle*, a combined motor cycle track and sports ground has been laid out at Derby, and the work has progressed so well that it is now hoped to have it ready for racing next season. Concreting has commenced.

Mr. C. A. Clews, the Chief Engineer to the Derby Council, has retained the services of Professor Low as consultant, and the work is being carried out under his direct supervision.

The track is approximately three laps to the mile, and will be constructed to be safe at 80 m.p.h., having progressive banking, so that the ordinary amateur can take his machine round and gradually increase speed with perfect safety. Arrangements for distributing news and proper stands will be fitted up. The banking will be specially designed for motor cycles, and the switch banking leading from the straights to the two ends will fall gradually towards the centre in order not to obstruct the view of the spectators. On one side will be a terrace capable of accommodating an enormous crowd. The centre will be used as a football ground and the immediate outside as a running track.

Theoretically Correct Banking.

As far as possible the banking has been arranged so that, even with four-wheeled vehicles, high speeds can be attained with reasonable safety. The surface will be of properly reinforced concrete.

The transition bankings are being built in such a manner that a vehicle, on entering the curve, will not tend to leave the ground or skid, the curves being "corrected" in both directions. There will be an almost vertical wall forming part of the edge of the banking.

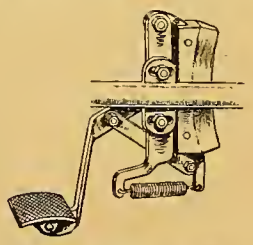
The great disadvantage of finishing down a straight or round a loop, which is experienced at Brooklands, will be entirely avoided. However, the Derby track is in no way competing with the Weybridge one, but is intended as a thoroughly sporting race course, and as such it should certainly fill a very important place in the world of motor cycle sport.

PRACTICAL ASSEMBLED LIGHTWEIGHT.

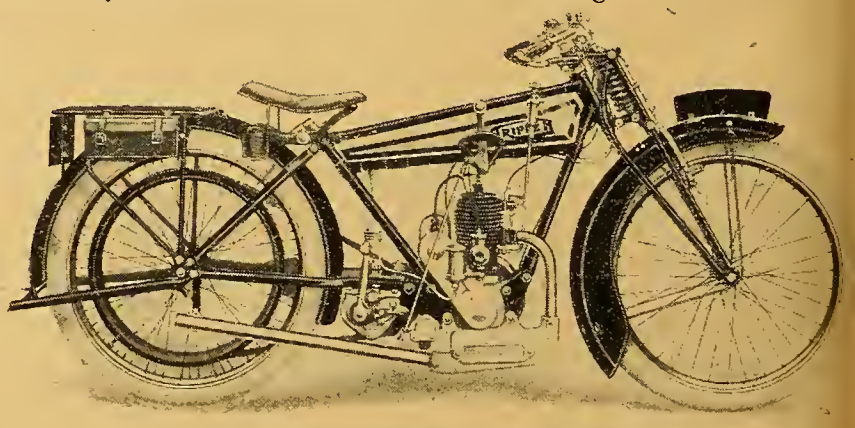
Moderately Priced Triple-H Two-Stroke with Morris Engine.

THOSE who require a thoroughly well turned out medium-weight machine at a strictly moderate price will be interested in the Triple-H productions, which are manufactured by Hobbis Bros. & Horrell, of West Heath, Northfield, Birmingham.

The specification of this machine includes a Morris two-stroke engine of 67×70 mm. (247 c.c.) and a Moss two-speed gear with clutch and kick-starter; transmission is by chain and belt and every detail is practically designed. The magneto is carried well behind the cylinder, where it is clear of mud and water; sensible mudguard sizes are employed; Maplestone front forks are fitted, and the rear brake is a particularly ingenious piece of work; it is constructed of strip steel, a large friction shoe working on the inside of the belt rim, and is operated by a direct heel pedal, eliminating the necessity for a long rod.



Simple direct acting rear brake.



Semi-sporting model, but fitted with a sensibly large silencer.

Another feature of the Triple-H motor cycles is the large aluminium silencer which lies below and to one side of the engine. This silencer has a detachable side plate through which it can be cleaned and which may be fitted with baffle plates if desired. The final tail pipe extends to the rear spindle. The tyres fitted are 26×2¼in. Avons. A sloping top tube gives the machine a neat appearance, and complete with aluminium footrests, tool bags, clutch and kick-starter, it is priced at £45 3s.

It may be recalled that a special feature of the Morris engine, which has proved very satisfactory in use, is the unusual system of lubrication; oil is fed direct to the piston through the side of the cylinder, passes round suitable grooves in the piston and thus reaches the hollow gudgeon pin. Surplus oil is then led to the main bronze crankshaft bushes.

GAILLON HILL-CLIMB.

BY reason of weather conditions and the road surface, the pace was not particularly fast at this year's Gaillon hill-climb, held on Sunday morning of last week. The fastest time of the day was made by Franconi on a 500 c.c. Motosacoche, who covered the flying kilometre in 28 4-5sec., thus beating two Peugeots, the much-feared Pullin's Douglas, and Bartlett's A.B.C.

Pullin Wins 350 c.c. Class.

C. G. Pullin did his best work in the 350 c.c. class, for here he took his Douglas up the hill in 32 4-5sec., winning easily over his rival Meunier on Alcyon.

The results were as follows :—

250 c.c. SOLO.—1, G. Jolly (Alcyon), 45⅗s.; 2, M. Jolly (Armor), 50⅗s.

350 c.c. SOLO.—1, C. G. Pullin (Douglas), 32⅘s.; 2, Meunier (Alcyon), 36⅕s.

500 c.c. SOLO.—1, Franconi (Motosacoche), 28⅘s.; 2, Péan (Peugeot), 31⅖s.

750 c.c. SOLO.—1, Péan (Peugeot), 30⅗s.; 2, Franconi (Motosacoche), 32s.

1,000 c.c. SOLO.—1, Duverne (Harley-Davidson), 31⅕s.; 2, Vulliamy (Harley-Davidson), 32⅕s.

Motor Cycles at the Paris Salon

Motor Assisted Bicycles the Vogue. Miniature Motor Cycles. Few Medium and High Powered Machines. British, American, Belgian and Swiss Motor Cycles also Represented.

IF all the French motor cycles exhibited at the Paris show were on exhibition in an English city, there is no doubt that a large number of our readers would make a point of inspecting them, if only for the reason that British motor cyclists are keenly interested in all kinds of machines propelled by mechanical means. It is because we appreciate this that we annually visit the Paris Salon in order to place on record, for the benefit of our readers, an impression of the progress made by and the trend of the French motor cycle industry.

Not so Representative as in 1921.

Many years ago the motor cycle industry in France promised to equal our own, but those days passed, and motor cycles were in a moribund state until after the Great War, when, owing to the success of the motor cycle in the Services, the industry received an impetus which led one to believe that a great revival was on the horizon. Last year's Salon appeared to confirm this, but one is not so sure after examination of the 1922 exhibits. For instance, fewer manufacturers are represented, there are less really practical motor cycles and very few sidecar outfits.

It is impossible to say whether public interest has increased or decreased since last year, for the reason that in 1921 the exhibits were in the Grand Palais along with the magnificent automobile display, and it was impossible to discriminate between the merely curious and the potential motor cycle buyers. This year the motor cycles, together with the cycle cars and fire-engines, omnibuses and tip-waggons, were sent across the Seine to a group of temporary buildings in the shadow of Les Invalides, wherein lie the mortal remains of Napoleon Bonaparte and his generals.

Whether this separation is to the good of the motor cycle exhibitors is a moot point; some of them think that it is, but we consider that the importance of this section of the automotive industry is minimised in the eyes of the general public.

Motorised Bicycles the Vogue.

As has already been mentioned in *The Motor Cycle*, the motorised bicycle is at present the most popular type of motor cycle with the French manufacturers. Nearly every exhibitor displays a specimen in one form or another, ranging from pedal cycles, of standard design, fitted with auxiliary engines to machines which are slightly reduced editions of the orthodox motor bicycle.

It appears that the French industry is making a bid to draw into the petrol vehicle field buyers who have not hitherto been partial to the motor cycle.

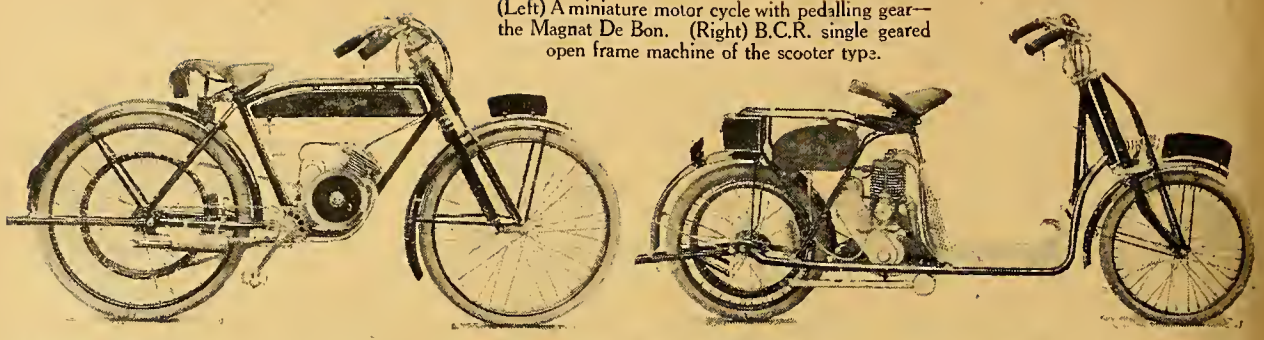
Apparently it is not expected that these cyclists, after having enjoyed the advantages of an engine, will develop into motor cyclists proper. There are many million cyclists in France and it would seem that the French motor cycle industry will be content to provide auxiliary powered bicycles for them. Therefore the makers have produced machines of the type which this section of the community *thinks* it requires, at the danger of losing their custom, rather than endeavouring to teach the pedal cyclist that (1) an ordinary bicycle is not quite suitable for the extra stresses, on account of the higher speeds attained and (2) that discomfort is bound to accrue with ordinary cycle tyres.

Three Types of Miniatures.

A few of the French designers have realised this and have embodied spring forks, others have produced miniatures of the conventional type, but, on the whole,

THE MOTOR CYCLE SALON. This year the motor cycles, together with the pedal cycles and cycle cars, are accommodated in a group of temporary buildings just across the Seine from the Grand Palais where the Automobile Salon is held.

(Left) A miniature motor cycle with pedalling gear—the Magnat De Bon. (Right) B.C.R. single geared open frame machine of the scooter type.



the French idea is a motor propelled pedal cycle rather than a true lightweight motor cycle as proportionate to the 250 c.c. type as the latter is to the 350 c.c. machine.

Thus, taken generally, the French motor cycle industry is producing three types of machines for a new market, which is considered to be immense :—

(1) Auxiliary engines for existing pedal cycles.
(2) Re-designed pedal cycles fitted with miniature engines.
(3) Miniatures of conventional motor cycles.

Taking each of these types separately we may group them as below :—

Auxiliary Engine Attachments.

CYCLOTRACTOR. — 50×55 mm., two-stroke, driving front wheel by friction pulley in contact with tyre.

MICROMOTEUR.—46×38 mm., two-stroke, driving front wheel by friction pulley in contact with tyre.

SICAM.—50×55 mm., two-stroke, driving by belt a separate countershaft from which the drive is usually taken to the back wheel by chain. Expanding pulley used as a variable gear and clutch.

VELOTOURISTE.—60×40 mm., two-stroke unit designed to fit under bottom bracket of a pedal cycle. The crankshaft is at right angles to a countershaft, from which the final drive is taken.

LUTETIA.—50×55 mm., two-stroke, embodying reduction gear. For fitting directly over the rear wheel, which it drives by chain.

HUNTER.—55×48 mm., two-stroke, embodying a reduction gear in a case integral with crank case.

LA CYCLETTE.—51×45 mm., two-stroke, embodying a countershaft and clutch.

VELO MOTO.—A unit, on the lines of the original Motosacoche, made to fit complete with tank into the diamond frame of a pedal cycle. It embodies the Sicam engine.

ANZANI.—60×40 mm., four-stroke, M.O S.V.S valves, mechanical lubrication, gear reduction by spur wheels.

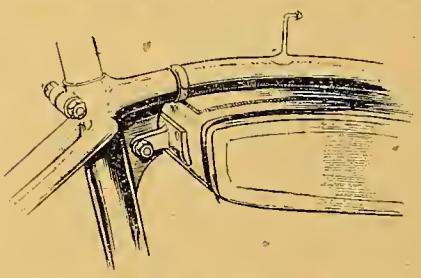
WONDER.—Flat twin, two-stroke, gear drive to bicycle bottom bracket axle.

EXSHAW.—50×50 mm., two-stroke, on the carrier driving rear wheel by belt.

These little engines are splendidly made and finished, and more than one enthusiast no doubt would like a specimen to place in his drawing-room cabinet. Apart from this they do not interest the man who is already a motor cyclist, although they are attracting considerable attention on the part of the non-motoring public.

Motorised Bicycles.

It is on examining the many examples of bicycles built specially to take small engine units that one realises that a large



Webbed lugs are used on the Louis-Clement motorised bicycle.

number of the people making them are cycle manufacturers pure and simple. Lack of experience is written too plainly on many of the machines by the manner in which the adaptations have been carried out. For example, on one motorised bicycle it had evidently been found that the driving chain fouled a projection on the engine, and in order to raise the chain a diminutive jockey sprocket is fitted. Again, where there is belt drive, almost flat leather straps are used instead of the type long proved to be the most satisfactory, *i.e.*, the 28° rubber belt. On some no effort has been made to lessen front wheel shocks by fitting spring forks, while the flimsiest of stirrup brakes are relied upon for safety and small cycle saddles for comfort.

To Attract the Lady Cyclist.

In the majority the workmanship and finish are of the best, and to the uninitiated, probably, they will make a strong appeal. Ladies who hitherto have eschewed the motor cycle are attracted by their apparent simplicity and the manner in which engine and transmission are guarded, but whether these miniatures will, by introducing their riders to the more substantial types, prove of lasting value to the motor cycling industry is somewhat doubtful. So much depends on the individuals riding them. If moderate speeds are adhered to, then they might be useful recruiting agents to the motor cycle world proper. On the other hand, if maximum speeds are indulged in, the road vibration from the small tyres—and perhaps the engines also—will cause motor cycles to be condemned *untried* as uncomfortable. Very many of these machines are now being offered to the bicycling public, but not all of them are exhibited at the Salon. Those shown are :—

ARMOR.—La Cyclette engine, light pivoted spring fork, final belt drive, 26×1¾in. tyres.

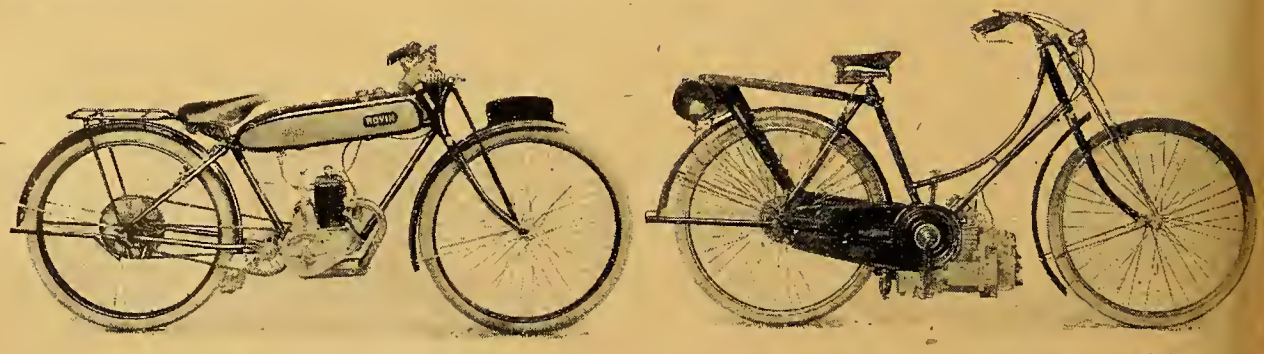
ALCYON.—A pedal cycle with a slightly elongated frame to accommodate small two-stroke engine forward of the pedalling gear. All-chain drive, light pivoted spring fork, 26×1¾in. tyres.

LA CYCLETTE.—La Cyclette unit. Gentleman's model: ordinary cycle frame with spring forks, final drive by belt. Lady's model: frame designed to take unit. A third model more on motor cycle lines with curved top tube, extra tank rail.

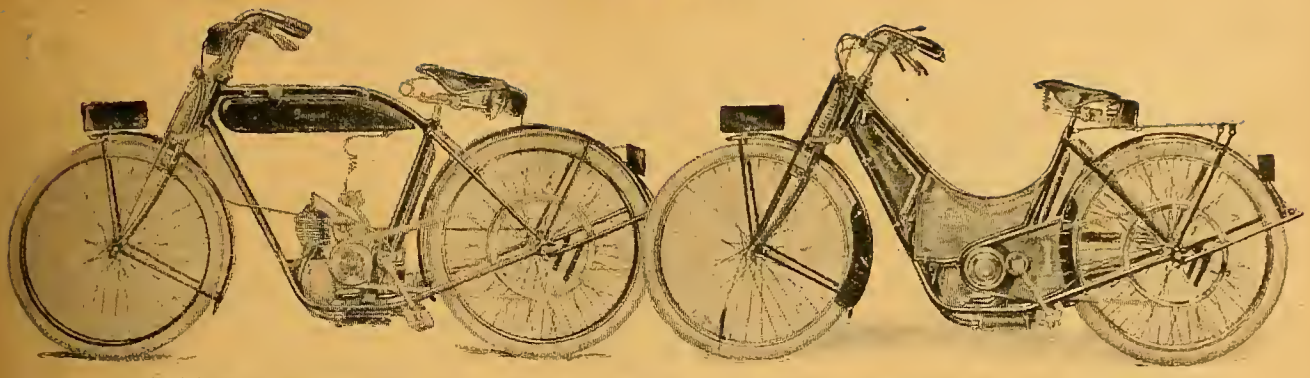
GRIFFON.—Following the general lines of a motor cycle, with sloping top tubes, spring forks, but has pedalling gear and 26×1¾in. tyres, Sicam engine unit.

P.S.—Similar to the Griffon, but with a Train engine unit, clutch and chain-drive. Linked spring fork with vertical laminated spring. Neat lady's model also shown.

LABOR.—Practically a duplicate of the Armor.



The Rovin miniature with two-speed gear, clutch, and all-chain drive. A Mototouriste lady's bicycle fitted with spring forks.



Reminiscent of the Swift design of 20 years ago, the Peugeot has a small engine gear unit set across the frame.

PEUGEOT.—An excellent production. 52×52 mm., two-stroke engine, set across the frame between duplex tubes, worm reduction gear, final drive by belt, spring forks, pedal cycle brakes, 26×1¾in tyres.

LELOIR.—In spite of its pedalling gear more like a conventional motor cycle than the majority. 55×52 mm. Train two-stroke unit with clutch. Final drive by belt. 26×1¾in. tyres. Triumph type spring fork, pedal cycle brakes.

MOTOTOURISTE.—An ordinary bicycle frame fitted with a spring fork. Velotouriste proprietary engine unit. Chain transmission. 26×1¾in. tyres.

THOMANN.—La Cyclette unit, final belt drive, spring forks, 26×1¾in. tyres.

MONET-GOYON.—An elongated bicycle with power unit between rear wheel and bottom bracket. Four-stroke engine, with automatic inlet.

LOUIS CLEMENT.—On bicycle lines but having webbed lugs to the frame. A miniature two-stroke engine drives a countershaft by chain, final drive by belt. Spring forks of the link type with laminated springs.

MAGNAT DE BON.—A neat little machine, with spring forks, curved top tube, two-stroke engine, all-belt drive, 26×1¾in. tyres.

SPADA.—An open frame miniature, resembling the Skootamota, but with its power unit immediately in front of the rear wheel. This is a side-by-side twin two-stroke, embodying reduction gear and driving small rear wheel by chain. The cylinder dimensions are 44×49 mm.

B.C.R.—A single-speed open frame miniature, on the lines of the Reynolds Runabout, 20×2in. tyres.

LA FRANCAISE DIAMANT.—Probably the neatest machine of its type in the Salon. Frame embodies welded tank. Two-stroke engine with integral reduction gear, final drive by enclosed chain, 1 to 1 ratio. A lady's model on similar lines is also shown.

PROPUL CYCLE.—Reminiscent of the early J.E.S. motorised bicycles. Small 4-stroke engine, rather high in the frame. Chain drive to countershaft (below the bottom bracket), containing clutch, motor cycle type brakes, final belt drive, 26×1¾in. tyres.

MOTOSOLO BABY.—Inclined top tube to frame, spring forks with laminated spring across the top of handle-bars, two-stroke engine, driving its magneto from mainshaft. Primary drive by friction wheel on countershaft engaging similar wheel on engine-shaft, final drive by chain, 26×1¾in. tyres.

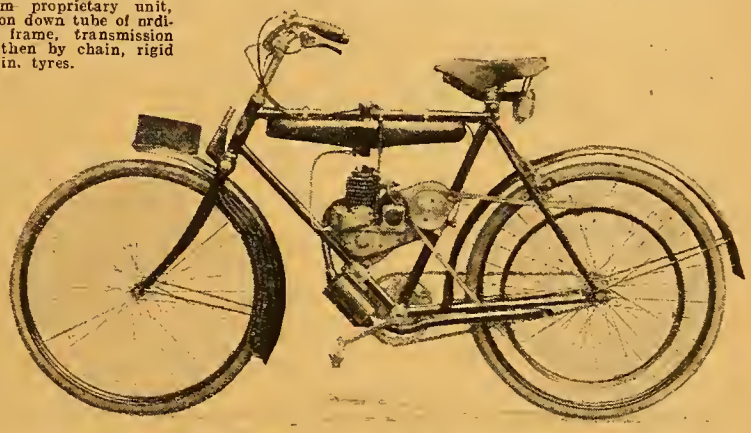
O. PAPIZE.—A Diamant under another name.

GOLIATH.—Two-stroke, horizontally arranged over the rear wheel, driving by chain a countershaft, on which is a friction wheel engaging with the edge of the wheel rim.

COLUMBIA.—Train engine unit with clutch, chain drive, spring forks, 26×1¾in. tyres.

D.F.R.—Train engine unit.

SICAM.—Sicam proprietary unit, countershaft on down tube of ordinary bicycle frame, transmission by belt and then by chain, rigid forks, 26×1¾in. tyres.



A popular type in France—the Labor, which embodies a pedal cycle frame and is fitted with a light spring fork.

AUTO MOTO.—Two-stroke with reduction gear in front of engine, belt drive, motor cycle brakes, 26×1¾in. tyres.

Miniature Motor Cycles.

Rather than the merely re-designed pedal cycle, we think the ultimate type of machine "for the million" will be on motor cycle lines, but lighter and smaller than existing 250 c.c. machines. At the present time there are very few of this class on the market. We are glad, therefore, to see that a few French makers have recognised the possibilities of this step between the motorised bicycle and the present 250 c.c. motor cycle.

The examples of this type of miniature motor cycle at the Salon are :—

ROVIN.—Except for its pedalling gear, a reduced edition of a conventional motor cycle, with sloping top tube, small two-stroke engine, two-speed and clutch, 24×2½in. tyres.

LELOIR.—A flat twin four-stroke engine of 175 c.c., with Albion two-speed gear and clutch, spring forks, chain drive, 650×50 mm. tyres.

MONET-GOYON.—125 c.c. Villiers engine, sloping top tube, 600×50 mm. tyres, 2-speed and clutch, chain and belt transmission, link type spring fork.

Lightweight Motor Cycles.

While many manufacturers have abandoned the orthodox motor cycle in favour of the motorised bicycle, there is a good sprinkling of genuine lightweight motor cycles, but in most cases very little change has been made since the last Salon. Although several makers produce their own engines, proprietary units are largely used.

Of orthodox motor cycles, the 250 c.c. and 350 c.c. types are the most popular in France. The following examples are exhibited :—

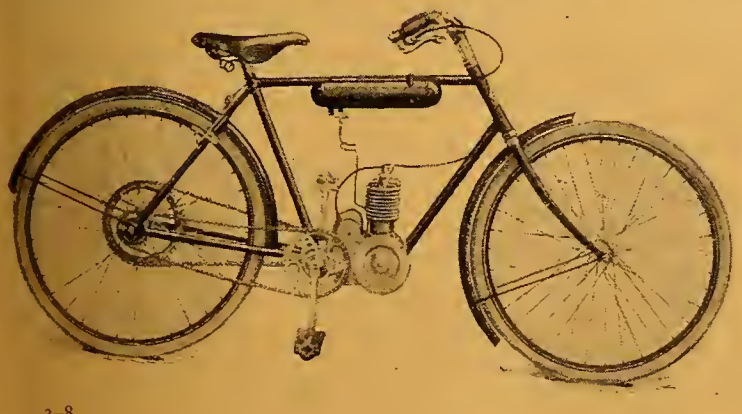
SUPPLEXA-JAP.—On conventional British lines, with sloping top tube and embodying English components, such as Jap engine and Albion gear box, 26×3in. tyres.

MAGNAT DE BON.—Inclined two-stroke, loop frame, 24×2½in. tyres.

SOYER.—An excellent production made by a firm seriously interested in motor cycles. It is reminiscent of the American Cleveland so far as general outlines are concerned, but follows British practice in the lay-out of the power and gear units. 250 c.c., two-stroke. Chain-belt transmission. 650×55 mm. tyres.

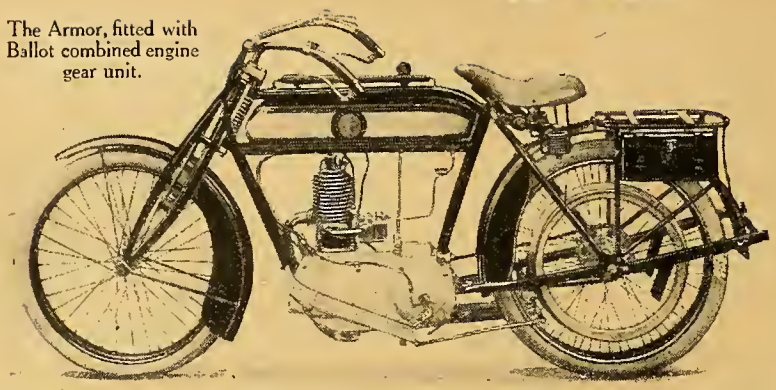
MOTO SOLO.—Loop frame. 250 c.c., two-stroke engine. Druid type forks.

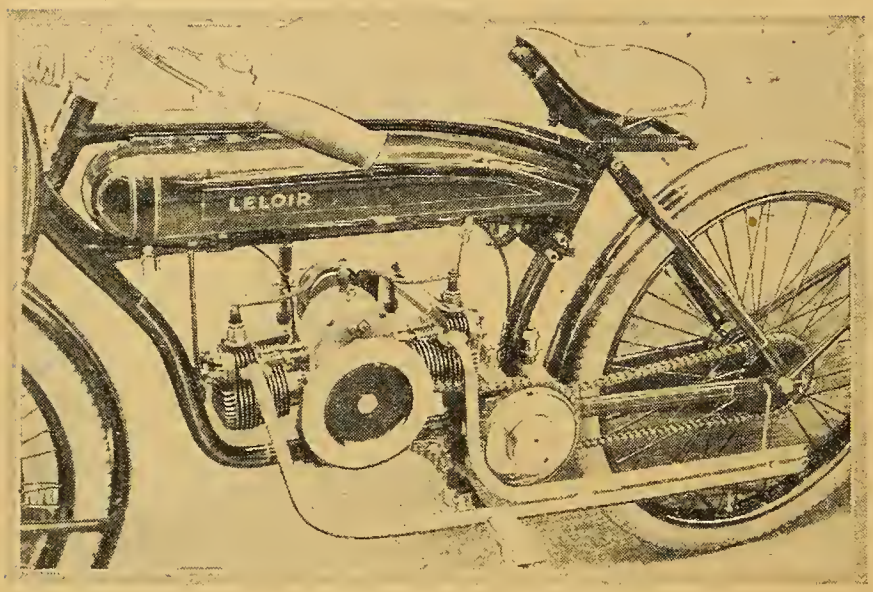
ULTIMA.—On similar lines to Moto Solo and many others; sloping two-stroke engine.



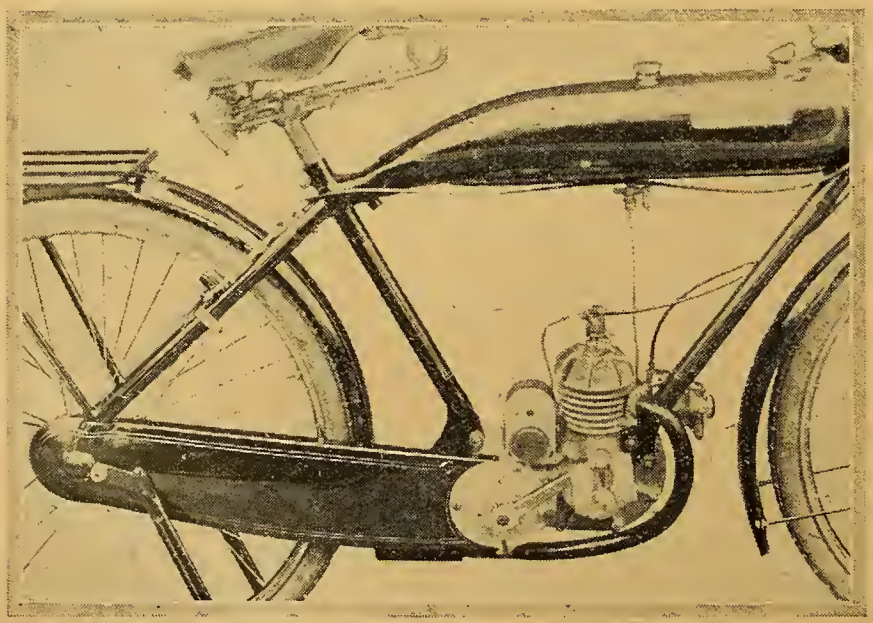
The Alcyon ultra lightweight, fitted with a two-stroke of 98 c.c. It has chain drive, but no spring forks.

The Armor, fitted with Ballot combined engine gear unit.





A 175 c.c. flat twin—the Leloir.



The Diamant, which embodies a welded tank as part of the frame.

TERROT.—One of the best known lightweights, similar to the Moto Solo, Ultima, Peugeot, etc.

YVELS.—A Villiers-engined machine on British lines. Druid forks. 26×2½ tyres.

D.F.R.—A good range of two-stroke and four-stroke machines, the latter with an o.h.v. Blackburne engine and all-chain drive, through an Albion gear box.

PEUGEOT.—A proprietary two-stroke engine. Two-speed gear. Curved top tube.

ALCYON.—A good-looking machine with Ballot combined engine-gear unit.

ARMOUR.—As Alcyon.

LABOR.—As Alcyon and Armour.

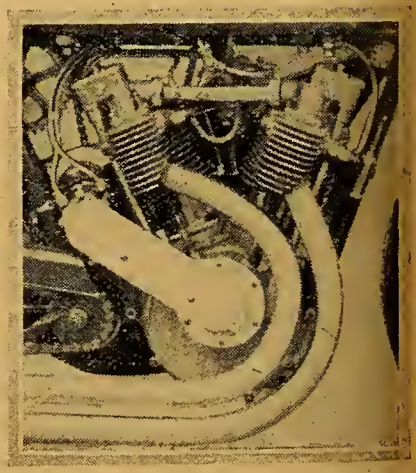
BASTIDE.—A machine built round an o.h.v. Blackburne engine.

B.C.R.—Conventional type of 250 c.c. lightweight, with 650×65 mm. tyres.

Both Brakes on Rear Wheel.

There is nothing of particular interest in connection with the machines mentioned above. All are of average design and construction, excepting that in the majority of designs both brakes operate on the rear wheel. Sometimes these are side by side, at others inside and outside the belt drum, or, a third method, with both shoes engaging the V of the drum, one above and the other below the stay. Taken generally, the engines are well made and finished, being perhaps more "clean" than the average British machine. Against this, however, many mudguards are not of good quality, and a few of the tanks are very indifferently finished.

One motor cycle in this group—the Bastide—calls for special mention, as an example of how not to build a frame around an engine unit. Apparently the makers decided at the last moment to stage a model embodying the o.h.v. Blackburne engine, perhaps on account of the success of the D.F.R.-Blackburne at the Bois de Boulogne speed trials. A standard frame obviously did not leave room for the rather tall Blackburne, so to accommodate it the lower tank tube was bent upwards to clear the o.h. valve gear. This was not sufficient, however, to render the cylinder head accessible, hence it was necessary to take this distorted tube by a circuitous route. By the time this was achieved there was no room for the tank beneath the sloping top tube, and so it finally found a resting place on the top of the tube. The result is something startling, to say the least.



The latest 993 c.c. M.A.G. engine has enlarged fins on the valve pockets.

The Gnome-Rhone follows English practice throughout and embodies a 499 c.c. engine with outside flywheel.

Medium Power Singles.

As most manufacturers are focussing their attention upon the motorised bicycle, it is perhaps natural to expect that the medium-size single would be neglected. Very few machines of the types approximating to the Triumph, B.S.A., Sunbeam, etc., are exhibited, but those that are on show are produced by firms which take the motor cycle industry seriously rather than make it merely a side line in some other business.

In this class the French makes represented are:—

GNOME-RHONE.—A four-stroke of 499 c.c. with outside flywheel, closely following British lines. Produced entirely by its makers.

GRIFFON.—A rather large but handsome machine with an Anzani engine. Spring frame, using laminated springs, and Sturmey-Archer gear.

MAGNAT DE BON.—A 500 c.c. four-stroke with overhead valves. The engine is inclined in the frame.

GILLET.—A large two-stroke with gear unit in front of power unit.

French Twin Motor Cycles.

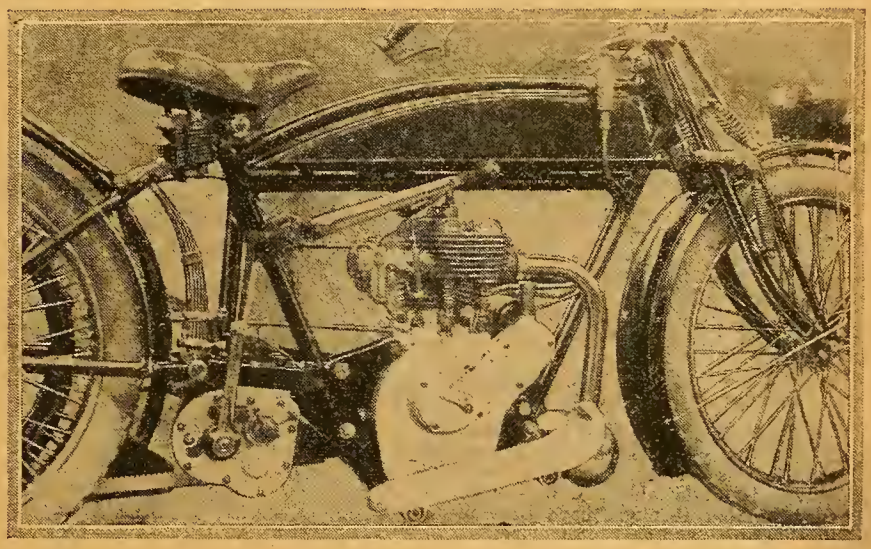
The twin-cylinder engine seems to be falling into disfavour in France if the number of exhibits is to be taken as any criterion. Perhaps, however, the makers consider foreign competition too strong. The only examples of French multi-cylinder machines of the types used for sidecars in the Salon are given below, but the Alcyon Co.'s catalogue quotes prices for such a model, although it is not staged.

RENE GILLET.—A conventional type of sidecar machine, very heavily constructed, with 3 speeds, all-chain drive, 26×3in. tyres, Brooks' cantilever saddle, spring sidecar wheel.

A.B.C.—The French-produced model of the well-known British design.

ORIAL.—An M.A.G.-engined mount at one time sold in this country as the G.L. A nicely-made machine with all-chain transmission and rounded pressed steel tank.

LUTECE.—Vertical twin engine gear unit combined. Shaft transmission, spring frame, electric lighting and starting.

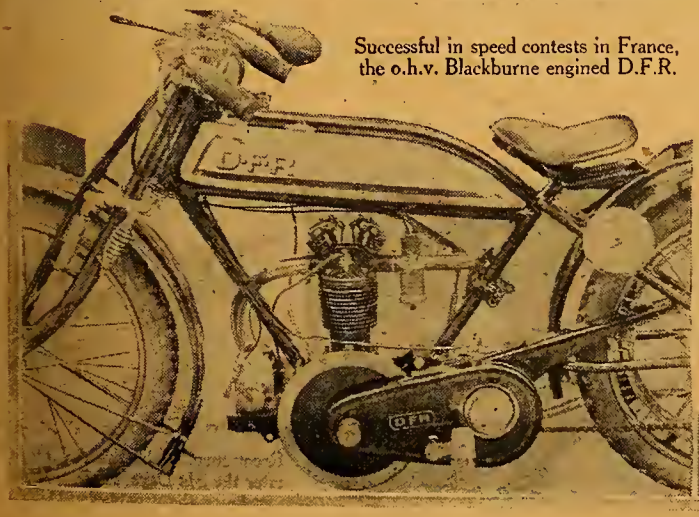


An Anzani engine and a Sturmey-Archer gear are the chief units of this spring-frame Griffon.

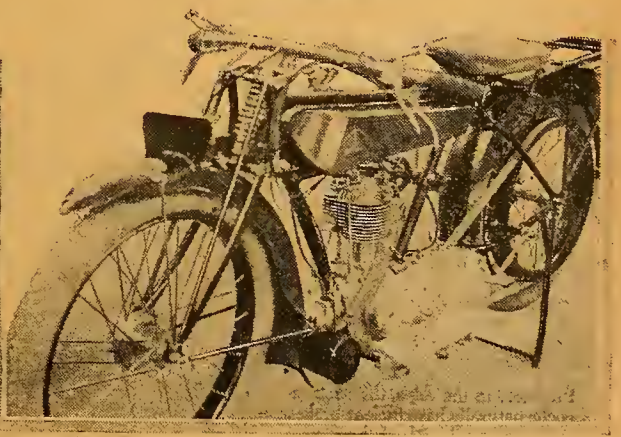
French Sidecars.

So few are the sidecars at the Salon that they are almost overlooked. Last year there were many very excellent productions, such as only a French coach-builder could build, but this year, with one exception, there is nothing which would attract attention at Olympia. The exception is a Lutece boat-built body.

Successful in speed contests in France, the o.h.v. Blackburne engined D.F.R.



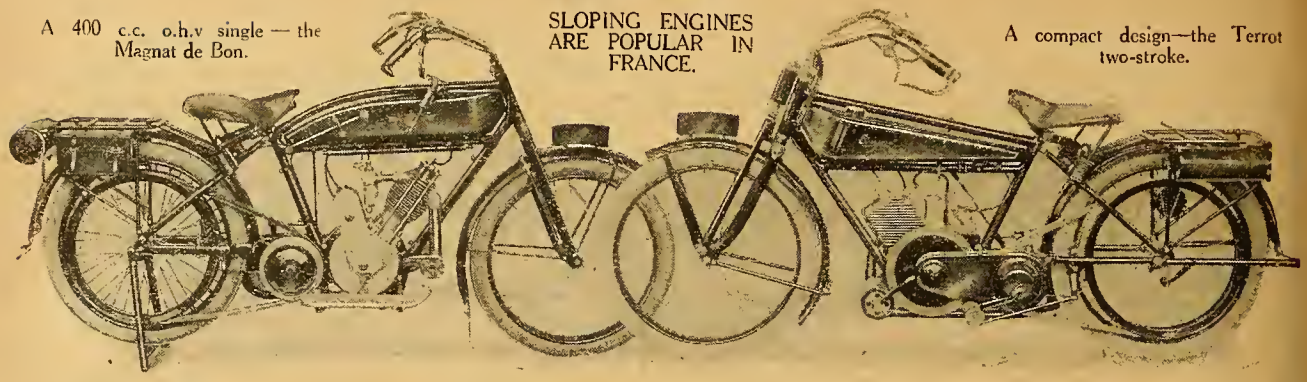
A J.A.P. engined lightweight following British practice, the Supplexa.

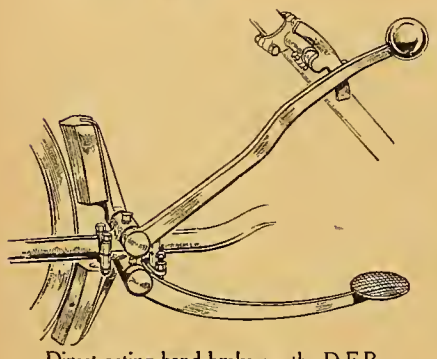


SLOPING ENGINES ARE POPULAR IN FRANCE.

A 400 c.c. o.h.v single — the Magnat de Bon.

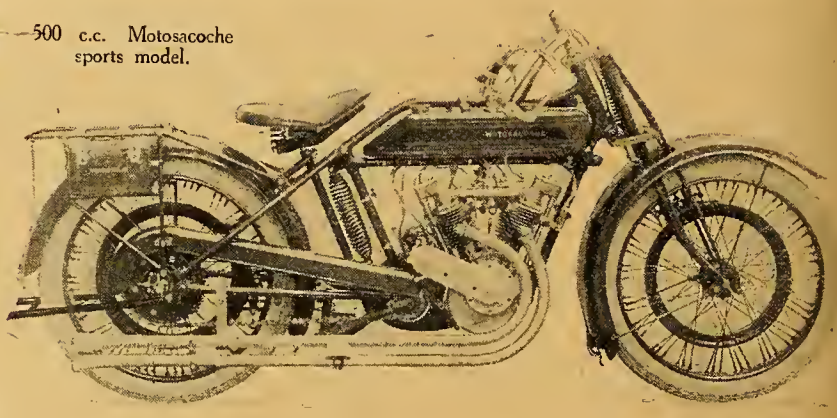
A compact design—the Terrot two-stroke.





Direct acting hand brake on the D.F.R.

500 c.c. Motosacoche sports model.

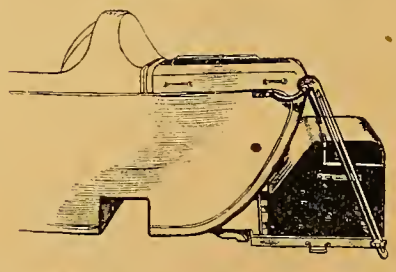


Of the others, the Ceel is an all-metal body of the type better known in America than in this country, and although probably it is comfortable and well made, it suggests that it might have been made in a foot-bath and dust-bin factory.

The Vannod has a torpedo body of stream-lined contour, while the Garnier, easily the best from the English point of view, is not so splendidly finished as it was last year.

British Motor Cycles.

Although not quite so many British machines are represented as last year, there is a good sprinkling of well-known productions. The tariff and rate of exchange render the prices of imported machines almost prohibitive; in fact, there are French small cars on the market at a lower price than several of the British motor cycles. Nevertheless, motor cycles produced in this country are appreciated in France, and always attract the attention of the visitor to the salon.

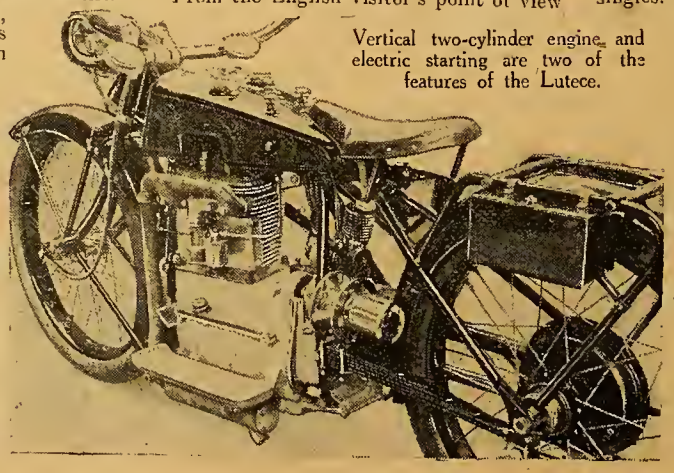


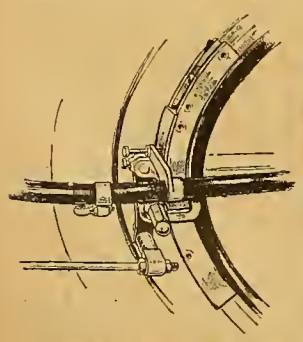
Metal luggage case on the grid of the Garnier sidecar.

From the English visitor's point of view probably the most interesting machine is the new o.h.v. Norton, which will also be on view at Olympia next month. It is a very substantial mount with the centre of gravity kept as low as possible. In order to accommodate the slightly higher engine, the lower tank tube is curved and disappears from sight into a recess in the tank. The overhead valve mechanism is supported on bronze columns in the cylinder head, and a finned nut is used to fix the exhaust pipe. A separate oil pump is located behind the seat tube, which carries the oil tank.

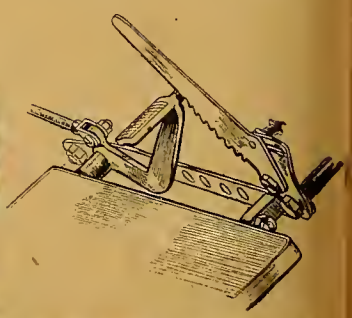
Another new model is the 350 c.c. B.S.A., an all-chain driven and slightly reduced replica of the well-known B.S.A. singles. The New Hudson agents also show, among the complete range of their motor cycles, one of the new 350 c.c. New

Vertical two-cylinder engine and electric starting are two of the features of the Lutece.





Produced in the Alps, the Motosacoche naturally has efficient brakes. Observe the length of the shoe



Recommended by the A.C.U. judges after the Six Days Trials. A ratchet brake on the new Harley-Davidson.

Motor Cycles at the Paris Salon.—

Hudsons, a very taking machine which will be more fully described in a subsequent issue.

Improvements in detail are also to be found in the Douglas, always a popular machine in France. The larger model now has quickly detachable wheels, a shock absorber in the rear wheel, and double exhaust box below the engine. Larger collars to the overhead valves are also fitted, and the cylinder head bolts have been continued to the base of the cylinders

The latest Cedos models, recently described in *The Motor Cycle*, are among the best finished machines in the show.

Scotts are exhibited by the makers' depot. The full Triumph range, too, is on view; and other British makes represented are:—

Aston-Atlas miniature. Cotton.
Kenilworth miniature. Velocette.
Skootamota. New Imperial.
Ner-a-Car.

Apart from the Scott and the Douglas the British twin is not represented, excepting in the Morgan, which, produced in France, is exhibited fitted with a J.A.P. engine.

American Motor Cycles.

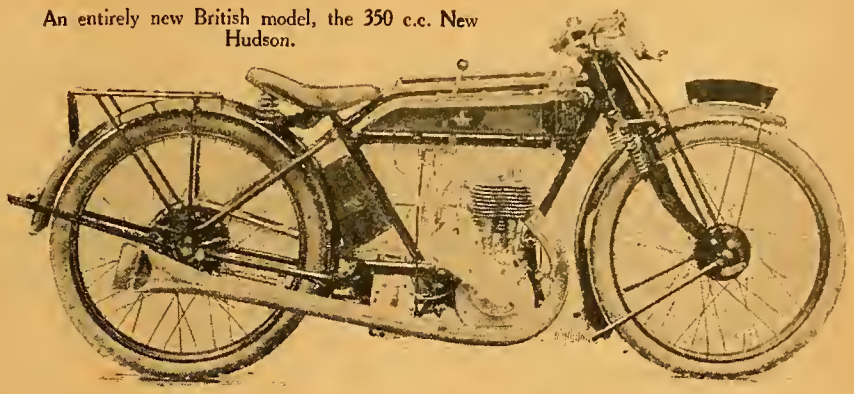
The fact that no British big twin side-car outfits are exhibited would, at first sight, suggest that there is a very limited demand for this type of machine, yet three of the best known American machines are staged, *i.e.*, the Indian (Scout, Powerplus, and Chief), Harley-Davidson (flat twin and big twins), and Henderson four-cylinder. The Cleveland lightweight is also shown by M. Picaud, who at one time was well known as the Clyno agent. M. Picaud informed us that he had sold 300 of these lightweights during the present year; they are very popular on account of their 26 x 3in. tyres.

The Briggs-Stratton Auto-wheel is also exhibited attached to various types of machines, including a weird cycle-car. The Evans motorised bicycle is also prominent.

Other Countries Represented.

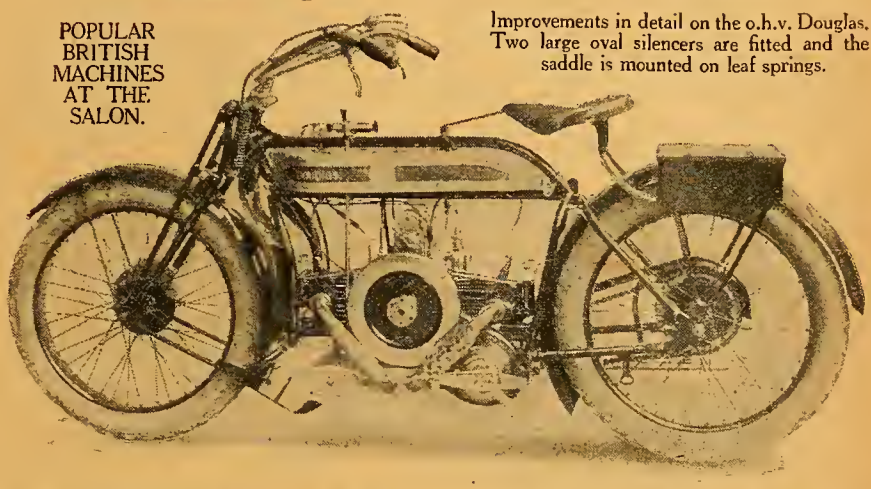
One feature of the Salon, compared with Olympia, is its international character. In addition to the French, British, and American motor cycles mentioned above, there are representatives of Belgium Switzerland, and Italy in the F.N., Motosacoche, and the Bianchi respectively.

An entirely new British model, the 350 c.c. New Hudson.

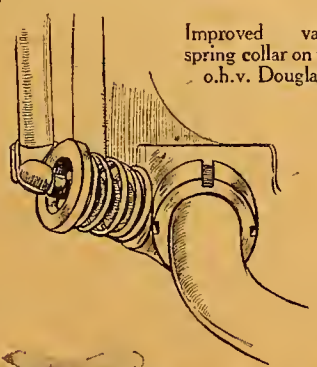


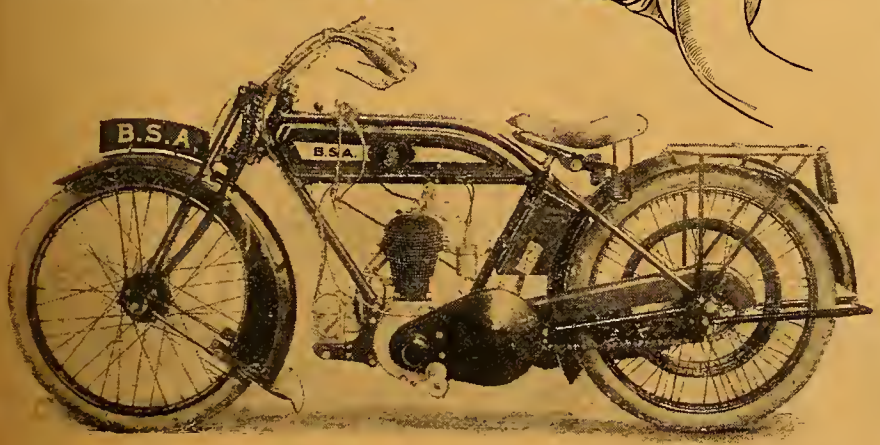
POPULAR BRITISH MACHINES AT THE SALON.

Improvements in detail on the o.h.v. Douglas. Two large oval silencers are fitted and the saddle is mounted on leaf springs.



Improved valve spring collar on the o.h.v. Douglas.





A 350 c.c. B.S.A., a machine that is sure to be popular with the many admirers of this make.

The F.N. is of course quite familiar in this country, and Motosacoche is associated with M.A.G. engines. The Bianchi motor cycle is not so well known, but deserves to be. It is a big single with combined gear unit, but otherwise follows British lines. The Motosacoche employs an Enfield type gear, but has three speeds in which each gear ratio has its own clutch; this is one of the improvements for 1923. Another improvement is the enlargement of the fins on the cylinder of the 993 c.c. M.A.G. engine.

Accessories.

One does not go to the Paris show to study motor cycle accessories, but a look round is always instructive. Naturally Great Britain holds as great a lead over other countries in the accessories as in complete motor cycles. Nevertheless there is always something to learn.

Carburetters, for instance, unless of English make, are the products of such leading firms as Claudel, Zenith, and Longuemare, which have been two decades in the industry, and while they may cost rather more than our own, they aim at full automaticity. Claudel has produced a new model with the diffuser jet in an inclined position.

The Zenith motor cycle carburetter is not normally used in England, but is found on the A.B.C. and others, while Longuemare has produced a two-lever pattern for the first time.

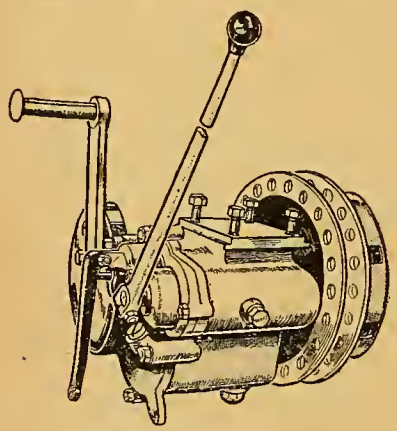
This year has shown a slight, but still marked improvement in motor cycle odd-

Motor Cycles at the Paris Salon.—

ments, and whereas last year only one motor cycle headlamp was discovered, this year we found several, and one by the famous firm of Ducellier, which was quite up to expectations.

A most ingenious idea is carried out in the Cicca generator (made at 41, Rue Charles-Lafitte, Neuilly s/Seine). The water needle valve is not only controllable by a screw in the ordinary way, but when open can be pushed up and down against a spring. This allows the valve to be cleared without dismounting it, and permits of an easy regulation of the gas delivery. Dupont et Traizet, 3, Rue Tesson, Paris, sell quite a good lamp set with a horizontal type generator.

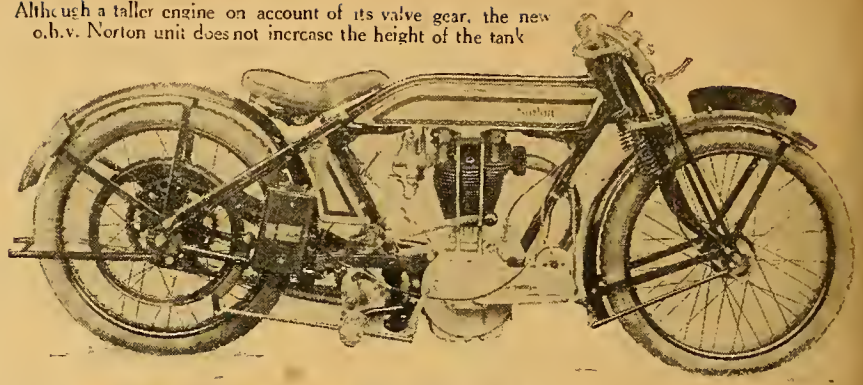
As in other Continental countries, the vendors of dissolved acetylene are more enterprising than our own, for they deal in cylinders in a greater variety of sizes. The Société Anonyme l'Acétyl, 19, Rue Brunel, Paris, sells cylinders for motor

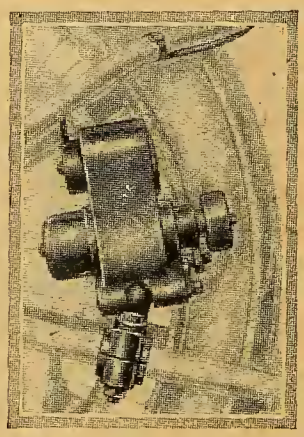


The Gnome-Rhone gear box—like the rest of this capable machine—closely follows British lines. Gear operation is by a long direct acting lever.

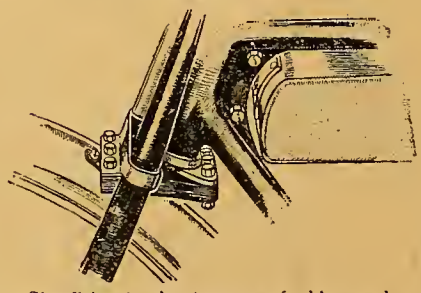
cycles of quite reasonable dimensions and weight, equipped with a simple form of gauge, the dial of which comprises no figures, but merely shows by means of a red hand if the cylinder is full or empty. One lamp set sold by the Société des Appareils Magondeaux, 212, Boulevard

Although a taller engine on account of its valve gear, the new o.h.v. Norton unit does not increase the height of the tank

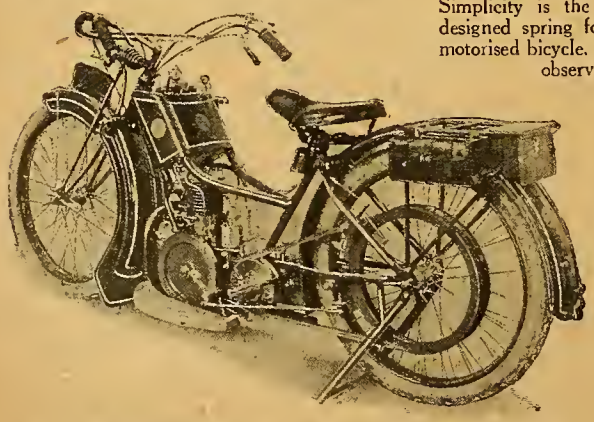




Mounting of the Lucifer dynamo which is friction-driven off the rear tyre.



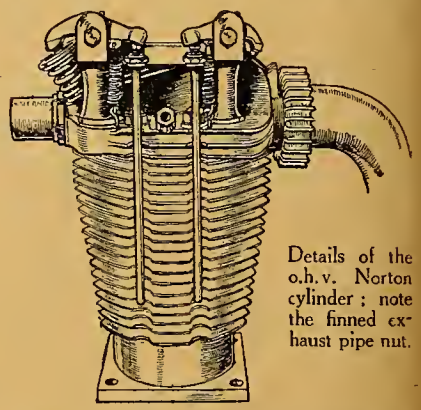
Simplicity is the keynote of this neatly designed spring fork on the Louis Clement motorised bicycle. The head lug, it will be observed, is webbed.



The only fully developed lady's motor cycle in the Salon—the Soyer, which has a tank integral with the duplex frame.

Pereire, Paris, has a bracket specially constructed to take a gas cylinder.

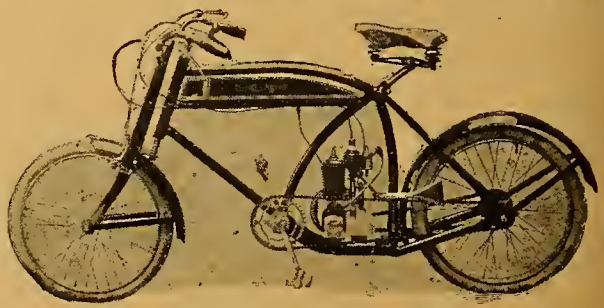
There is only one dynamo lighting set which is really up to British standards, and that is the production of Lavalette, an old-established French electrical firm. The set is well made and finished, and the dynamo is of small dimensions; it is demonstrated on a Harley-Davidson. We saw, however, several examples of the



Details of the o.h.v. Norton cylinder; note the finned exhaust pipe nut.

smaller electrical outfits friction-driven off the tyre. At present these sets have not been popular in England, but it is worthy of mention that one of the most famous Continental ignition specialists has placed an outfit of this type on the market.

Quite a good specimen is the Lucifer—La Societé An. des Magnétor Lucifer—which hails from Carouge, near Geneva, the dynamo of which generates a continuous current capable of charging a 4 volt 10 amp. accumulator. On the accumulator box the switches are neatly



Scooter or motorised bicycle? The Monet-Goyon, which has a miniature four-stroke engine and chain drive.

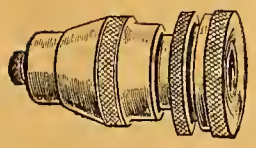
Motor Cycles at the Paris Salon.—

carried, while the excellently made headlamp has a small auxiliary bulb for use in towns. Much thought has been expended on the generator which is of the permanent magnet type, enclosed in an aluminium case which is water- and dust-tight, while ball bearings are employed, and a cut-out is provided to prevent the current returning from the accumulator to the generator at low speeds or when the machine is at rest. Owing to the ingeniously designed bracket which has a universal joint the dynamo or generator may be driven off either front or rear tyre or by means of a belt off any conveniently accessible shaft. As a safeguard against theft a lock switch is incorporated in the distribution box. Provision is made for an inspection lamp, the connection to which is on the fuse box.

Section of the Le Johest silencer.

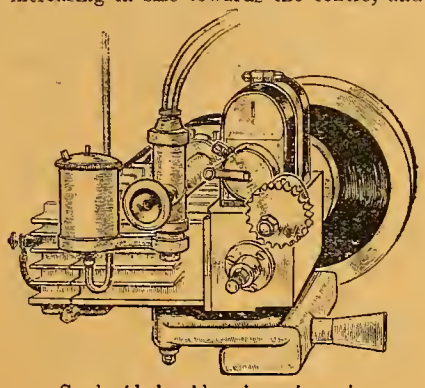
Another example of the above system is the Alternacycle, which has been seen in England, but in this set an alternating current is produced, and no dry battery is supplied for keeping the lamps lighted when the machine is at a standstill, though it would not be difficult to fit one.

Holding down bolts on the new Douglas.



The Immediat push-on-inflator connection.

In view of the compulsory silencing of motor cycles in England a few words on the Johest silencer (E. Morlé, 37, Boulevard Richard-Lenoir, Paris) will not be out of place. The outer casing is composed of two inverted cones welded together, while inside is a spiral gradually increasing in size towards the centre, and then diminishing to the same extent, with a hole drilled throughout the whole of its length. It is claimed that the exhaust gases meet with no obstruction, that a turbulence is set up which actually creates a suction, with the result that not only extra silence but greater efficiency is obtained.

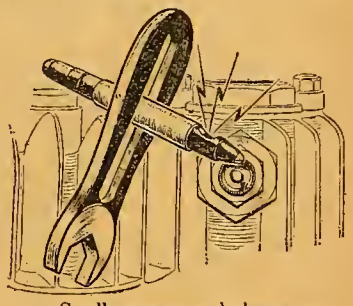


Spada side-by-side twin engine unit.

Mention must be made of the excellent American cloth inner tube protector sold by J. Drapier et Cie, 5, Rue de Montmorency, Paris. The tube is rolled round the handle-bar and the cover is clipped over it. It is quite a good idea and is moderate in price.

A unique hand torch, the S.A.M., the illuminant of which is dissolved acetylene.

Naturally English accessories were represented by various concessionnaires, Amac and Brown and Barlow carburetters, the products of North and Sons, S. Smith and Sons, and Tan-Sad specialities were to be seen at the Salon and in the Invalides Annexe.

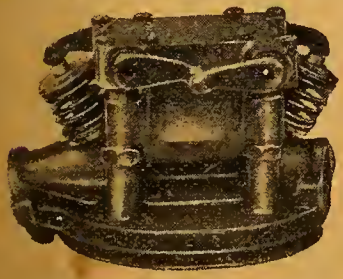


Sarello spanner and plug tester.

WELL-LUBRICATED OVERHEAD GEAR.

MODIFICATIONS of the cylinder head tending towards external cleanliness, will be made in the "oil-cooled" 350 c.c. Bradshaw engine for next year.

The valve rockers, which have an extensive bearing area, are lubricated by a wick permanently dipped in an oil bath at the foot of the rocker box.



Cylinder head assembled showing oil-bath rocker box.

Details of the head. From left to right: the actual head, illustrating the large diameter of the valves; the rocker box with wick-fed rocker bearings, and the same item assembled.

Basing their claim on experiments, the makers say that the valve gear will look after itself for many thousands of miles without attention.

Two other good points are noticeable in the 1923 head. The valves themselves are of particularly large diameter, and the rocker arms are so arranged that the push rods are perpendicular. Angularity of thrust is thus avoided.

James Walmsley and Co. (Preston), Ltd., Marathon Engineering Works, Frank Street, Preston, is the address of the makers.

WIDE RANGE OF SPRING FRAME MACHINES.

ALTHOUGH a very wide range of P.V. machines will be marketed next year there has been no radical change in the design of this old-established spring frame motor cycle.

1923 plans are best described by enumerating the various engines used:—247 c.c. and 343 c.c. Villiers; 349 B. and S.; 293 c.c. and 349 c.c. single-cylinder and 500 c.c. and 678 c.c. twin-cylinder J.A.P.s. Both the twins are of the sports type and provide an excellent combination of liveliness with comfort.

The makers are P.V. Motor Cycles, Ltd., Perry Vale, Forest Hill, S.E.23.

ECLIPSE OF THE 500 c.c. SINGLE.

Successes by 662 c.c. Twin and 349 c.c. Single at South Midland Centre Kop Hill-climb.

D. F. C. Fitzgerald (490 Norton sidecar) breaking the tape which operated the signalling arm on the left.

IN spite of a wintry wind that swept the bleak face of Kop Hill, a goodly crowd of spectators watched the postponed South Midland Centre climb there on Saturday.

It was a homely little event, especially the timing arrangements, but would have been quite interesting had not the majority of the onlookers omitted to bring field glasses, or, alternatively, had the figures on the scoring board been twice as large. The timekeeper had located himself on a far-away knoll, whence he could see the starting and finishing lines, and the Heath Robinsonian string-operated signal arms thereon.

The timing could not have been accurate to the tenths of seconds employed, but probably the error factor was constant.

In the 350 c.c. and 500 c.c. solo classes G. L. Werts (349 Curtis-B. and S.) had things all his own way, but in the 750 c.c. and two unlimited solo classes competition was much keener. Nevertheless H. H. Saddington surprised everybody by extracting a little more speed out of his 662 c.c. James on each ascent, winning his first class easily, tieing with E. J. Cross (989 Harley-Davidson) in the second, and beating Baragwanath (Matchless) in the third. Star performance, however, in the last-mentioned event, for which entries were received on the hill, was made by the third man, E. A. Marshall (499 Matchless-M.A.G.), who only lost second place by $\frac{1}{10}$s. Furthermore, Marshall, whose machine is seven years old, by clocking 30.9 seconds in an inter-club contest, made second fastest time of the day.

De Lissa's M.A.G. was hard pressed by Baragwanath's Matchless in the "any condition" sidecar class, but won both that and the ordinary 1,000 c.c. event. Baragwanath got his own back by making fastest sidecar time of the day by two seconds in the inter-club contest, which much to his disgust was not officially recognised.

The 500 c.c. single did not shine.

By the close margin of 11 to 10 the North-West London M.C.C. beat the North London M.C.C. in the twice postponed annual inter-club contest. On the other hand, the Luton and South Beds. A.C. won the club contest in the hill-climb proper, scoring 55 points against Oxford's 27 and North London's 15.

Results:

250 c.c. SOLO.—1, E. C. Gordon (248 New Imperial), 52.2s.

350 c.c. SOLO.—1, G. L. Werts (349 Curtis-B. and S.), 36.7s.; 2, E. C. Gordon (248 New Imperial), 41.0s.

500 c.c. SOLO.—1, G. L. Werts (349 Curtis-B. and S.), 34.4s.; 2, T. W. Harris (490 Norton), 38.6s.; 3, O. G. H. Dunham (490 Norton).

750 c.c. SOLO.—1, H. H. Saddington (662 James), 31.2s.; 2, R. F. Overbury (744 Zenith), 35.0s.; 3, C. G. H. Dunham (490 Norton), 38.1s.

UNLIMITED SOLO.—1, H. H. Saddington (662 James) and E. J. Cross (989 Harley-Davidson) tied, 31.5s.; 3, E. W. Finch (976 Zenith), 32.9s.

UNLIMITED SOLO (ANY TYPE; ENTRIES ACCEPTED ON HILL).—1, H. H. Saddington (662 James), 30.4s.; 2, E. C. Baragwanath (996 Matchless), 31.3s.; 3, E. A. Marshall (499 Matchless-M.A.G.), 31.4s.

600 c.c. SIDECARS.—1, R. Newitt (494 Douglas sc.), 45.3s.; 2, E. C. Gordon (499 Triumph sc.), 53.4s.; 3, G. Slade (490 Norton sc.), 56.1s.

1,000 c.c. SIDECARS.—1, O. de Lissa (993 M.A.G. sc.), 36s.; 2, L. Avery (989 Harley-Davidson sc.), 38.2s.; 3, E. A. Bridgman (998 Indian sc.), 42s.

500-600 c.c. SOLO.—1, J. W. Gibson (550 Triumph), 43.7s.; 2, H. Flitt (550 Triumph), 53.5s.

UNLIMITED SIDECARS (ENTRIES ACCEPTED ON HILL).—1, O. de Lissa (993 M.A.O. sc.), 35.0s.; 2, E. C. Baragwanath (996 Matchless sc.), 35.5s.; 3, L. Avery (989 Harley-Davidson sc.), 38.8s.

"THE MOTOR CYCLE" REDUCED TO 3d.

We are pleased to announce that as and from the next issue (October 19th) the price of "The Motor Cycle" will be 3d. weekly.

The quality of the reading matter and the exclusive news service of the paper will be unaffected by this reduction in price; indeed our aim will be to maintain the high standard we have set, and which is appreciated by over 120,000 regular readers.

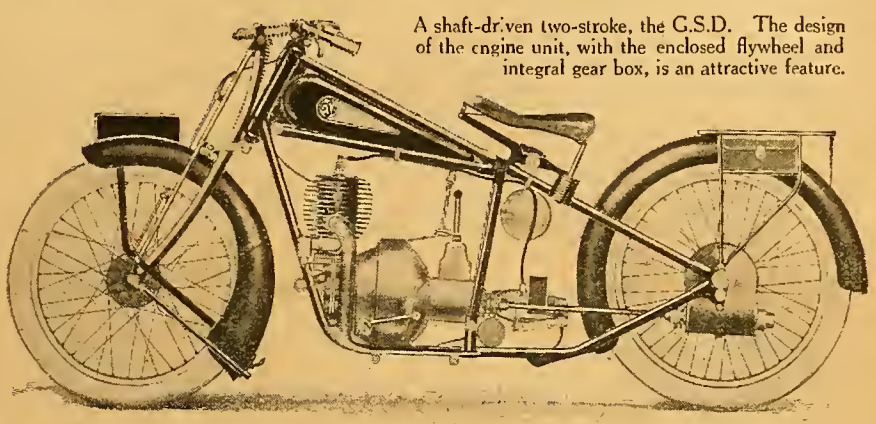
ILIFFE & SONS LTD.

A BRITISH SHAFT DRIVEN MOTOR CYCLE.

Enclosed Worm Transmission and Four Speeds; Transverse Engine Mounting.

MANY motor cyclists are constantly grumbling that the selection of shaft-driven machines is extremely limited. These and many others will be interested in the new G.S.D., which will make its first appearance at the forthcoming Olympia Show.

The machine has many unusual features, notably that it employs a four-speed gear box, duplex frame, shaft drive, and is capable of being fitted with engines varying from 350 to 1,000 c.c. h.p., with very slight modifications.



A shaft-driven two-stroke, the G.S.D. The design of the engine unit, with the enclosed flywheel and integral gear box, is an attractive feature.

Single Two-Stroke and Big Twin.

The two models which will be shown at Olympia will be engined with the White and Poppe 350 c.c. two-stroke and the 976 c.c. side-by-side valve twin Jap.

In each case the crankshaft will lie parallel with the centre line of the machine, the drive passing through a large diameter cork insert clutch to the primary gear shaft. From the four gears pressed on to this shaft the drive is transmitted to the secondary shaft, all the speeds being indirect. It is sometimes argued that an indirect top gear provides lower efficiency than the direct type, and yet it must be remembered that a single reduction for the lower gears is more efficient than a double reduction, and here the indirect box scores.

Transmission Lay out.

Both shafts are mounted on ball bearings, and the primary shaft is hollow, while through the centre of it runs a light shaft, attached to the flywheel, driving the magneto, which is placed directly behind the gear box.

From the above it will be gathered that the engine, clutch, gear box, and magneto are mounted as a single unit, the final drive passing from the secondary gear shaft to an underslung worm below the rear spindle by means of a shaft fitted with a Hardy flexible joint at each end.

An important point is that both worm and worm wheel are enclosed in a single housing, which is separate from the frame and cannot be distorted by frame stresses. In addition, arrangements have been made whereby the rear wheel, complete with worm gear, can be very readily detached. It is necessary only to slack off the spindle nuts, one torque nut, and the brake connection, to slide the wheel completely out of place. If, however, a tube is to be removed for inspection, a distance piece may be detached by unscrewing one spindle only, leaving room for the tube to be entirely removed without further disturbing the unit.

Internal expanding brakes are fitted front and rear; the front wheel being mounted in Brampton forks, while whatever size of engine is employed 26 in. × 3 in. tyres will be fitted.

The frame itself is duplex everywhere except for the top tube, which is single. The main tank carries fuel only, oil being contained in the forward portion of the clutch housing, and mechanical lubrication is employed.

Mudguarding and Weatherproofing.

All details are carefully carried out; the saddle is adjustable for position; a short stand is pivoted just in front of the rear wheel; 5-inch D section mudguards are fitted, and the aluminium footboards are adjustable for angle. From these footboards rise long curved leg shields passing up above the top tube, and the engine unit may be isolated from the rider by detachable panels corresponding to the bonnet of a car.

It is hoped that the machine will be sold at a price of £85, with an increase in price according to the size of engine used.

The producer of the machine is Mr. Grant, 15, St. Paul's Road, Foleshill, Coventry.

DOUGLAS AND HARLEY RECORDS.

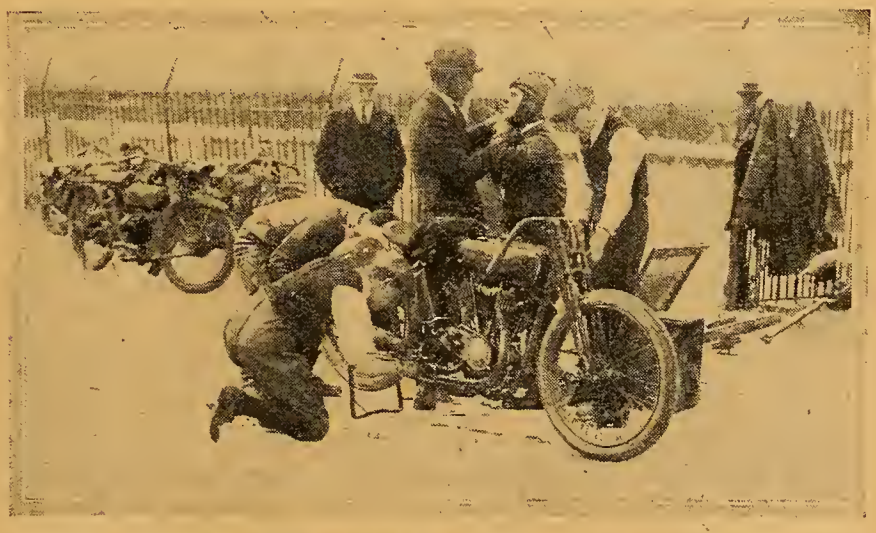
ON October 2nd the famous rider, J. L. Emerson (494 Douglas), succeeded in breaking two 500 c.c. records. In 3 hours he covered 194 miles 1,394 yards, an average speed of 64.93 m.p.h.; and, carrying on, gained the 200 miles record in 3 hours 4 min. 28.15 sec., at a speed of 65.05 m.p.h.

On Wednesday of last week C. F. Temple and F. Allchin gained an important series of Class E (1,000 c.c. solo) records on a 998 c.c. Harley-Davidson.

Time.	Distance.	Speed.	Km.p.h.
2 hours.	163 miles 606 yds.	81.67 m.p.h.	(131.43)
3 hours.	228 miles 708 yds.	76.13 m.p.h.	(122.51)
4 hours.	307 miles 361 yds.	76.80 m.p.h.	(123.59)
5 hours.	385 miles 1712 yds.	77.19 m.p.h.	(124.22)
6 hours.	444 miles 849 yds.	74.08 m.p.h.	(119.22)

Distance.	Time.	Speed.	Km.p.h.
200 miles.	2 h. 30 m. 32.30 s.	79.71 m.p.h.	(128.28)
300 miles.	3 h. 53 m. 3.22 s.	77.23 m.p.h.	(124.28)
400 miles.	5 h. 10 m. 41.22 s.	77.24 m.p.h.	(124.34)

The last two hours were run in heavy rain, which caused a certain amount of ignition trouble and seriously inconvenienced the drivers.

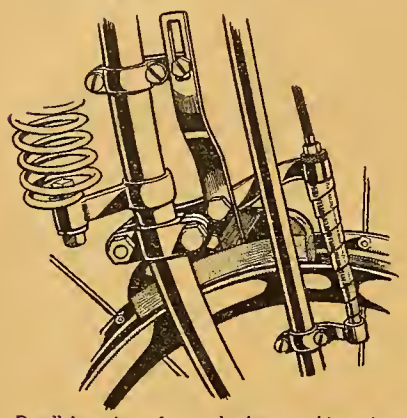


T. R. Allchin and his Harley-Davidson being prepared to continue the successful record attempt achieved in conjunction with C. F. Temple.

NEXT YEAR'S HUMBER MODELS.

Improvements in Mudguarding and Braking. Sporting Model Practically Unaltered.

VERY few modifications will be found in the 1923 Humber. The flat twin engine of 75×78 mm. bore and stroke remains unchanged, but there are a few details of some importance which have been modified. The front fork is now considerably wider so as to allow the fitting of a 6in. "D" section guard without valances.



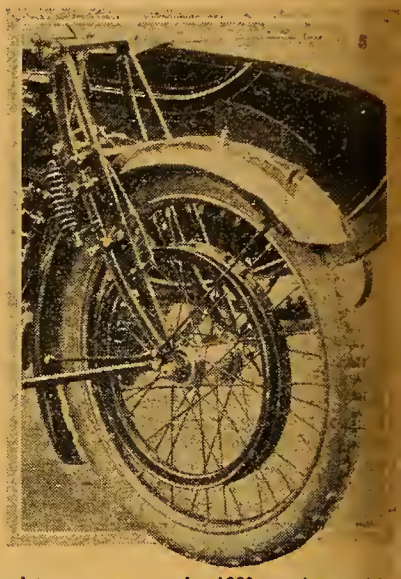
Parallel action front brake working in a dummy belt rim.

A similar guard is fitted over the rear wheel, the hinged portion behind the carrier being retained so as to render the wheel easily accessible. The front wheel is now fitted with a dummy belt rim brake, the shoe of which has a parallel action; the movement is very easily obtained by means of a tail-piece and slotted guide. The brake is applied by the pressure of the outer casing of the Bowden connection, instead of through the cable.

Further modifications concern chiefly the strength of the front stand and minor accessories, the object of the manufacturers being to supply a machine which is particularly suitable for heavy work overseas.

Adequate Mudguard Clearance.

As might be expected after the successes which have been obtained this year, the sports model will still be listed; this machine is similar in most respects, but the wide guards and new brake are not included. The mudguards on the standard models are provided with considerable clearance, and ample room between the forks for the fitting of oversize tyres, although the standard section is 26×2½in.

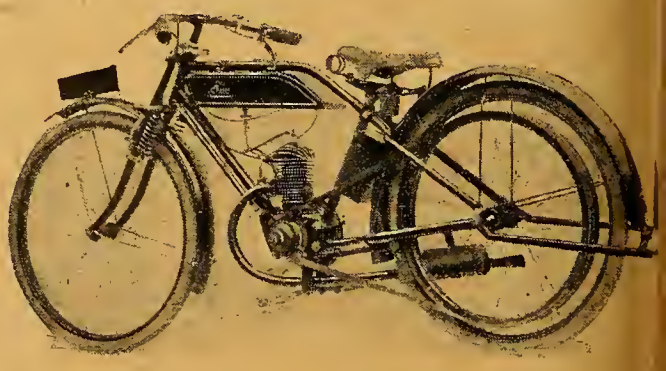


Improvements on the 1923 touring model Humber are the fitting of a front belt rim brake and much wider mud guards.

NEW ULTRA LIGHTWEIGHT.

THERE are, no doubt, many who will be interested to hear that the manufacturers of the well-known Sun-Vitesse two-stroke are now making an ultra lightweight, embodying a small two-stroke engine with flywheel ignition, 26×2in. tyres, and Druid forks.

As will be seen from the illustration, the frame is of the conventional type, giving a low riding position, and is suitable for the use of either lady or gentleman. The tank has separate compartments for petroil mixture and oil, the latter chamber being equipped with a measure. The single gear model is catalogued at £26 7s., and with two-speed gear £30 9s. Deliveries will commence almost immediately.



Of a type which promises to be popular next year: the new Sun ultra lightweight.

350 c.c. AND 499 c.c. SPORTING NEW HUDSONS.

NEXT year the makers of the New Hudson will cater more extensively for the solo rider than they have done hitherto.

The two-stroke lightweight and the single-cylinder sidecar outfit, considerably improved, will be retained, and in addition there will be a chain-driven three-speed 350 c.c. solo model in sporting and touring guises, and a 499 c.c. sports model really designed for speed work.

Prices will be lower all round; one model of the two-stroke, shorn of refinements but with the same engine as at present and a two-speed gear, will be very much cheaper.

The *de luxe* lightweight will be r tained; and the sidecar outfit will e body many new features as the result the company's experience with this yea design. Alternative sidecar bodies w be offered, including one with an ext seat for a child, and a folding sidec will also be available.

DUBLIN RAMBLERS' TRIAL.

THE Dublin Ramblers M.C.C., which was formed as an amateur organisation, but has now decided to admit to its ranks those engaged in the trade, held a reliability trial on Saturday last over two circuits of a sporting course of forty-six miles in Co. Dublin and Co. Wicklow.

A very handsome trophy was put up for the event by the president, Mrs. Callaghan, who is an active motor cyclist, and in addition she provided tea at her residence for the competitors and officials. The route embraced three well-known test hills, Devil's Elbow, near Glencullen, the Red Lane, from the Glen of the Downs to Calary, and Goat's Pa near Enniskerry. The Devil's Elbow w in good condition and claimed fe victims, but the other hills were grea Of the twenty-one starters, five failed complete the course, and nine of the oth sixteen were able to claim non-stop ru through all the observed sections.

CLUB NEWS.

Bristol M.C. and L.C.C.

Difficulty in finding a hill for the formula hill-climb caused its postponement until the Bath Club came to the rescue with Kingsdown Hill; great credit is due to the latter body for its sporting action in obtaining permission for an outside club to run on its preserves.

Southport M.C.

Birkdale Sands was the site selected for holding, on the 30th of last month, the third and last race meeting of the year. The popularity of the event may be judged from the entry list of 172 competitors. Results:

250 c.c. (GENERAL).—J. N. Roberts (248 New Imperial).

Oct. 15th.—Rotherham and District M.C.—Social Run via Penistone.

ESSEX AND SOUTHEND CLUB'S SPEED TRIALS.

SATURDAY'S speed trials of the Essex County and Southend Automobile Club were held before a select few at a little-known and little-advertised spot in the wilderness near Shoeburyness.

The entire lack of prior publicity was perhaps prompted by a becoming modesty anent the shortcomings of the organisation. Unwarned spectators were allowed to drive their machines up the "running out" stretch behind the finishing line, thus meeting 70 and 80 m.p.h competitors on a none too wide road, while again and again competitors were despatched back up the half-mile course before a class finished, passing the last man on his way. No times were posted, but an unused blackboard showed good intentions. Finally, the programme "entry" of 76 resolved itself into some 19 or 20 actual competitors, who rode in anything up to seven classes.

Slow Off the Mark.

Some excellent riding was witnessed, but really good starting (the distance was a standing-start half-mile) was not a feature. R. Weatherell (348 Weatherell), and L. McCardle (989 Harley-D.), were exceptions in this respect, however.

It will be noted that in the organising club's official results (below) a 398 c.c. A.B.C. figures as second place winner in the 350 c.c. classes, while W. H. Norris rode a 698 c.c. Raleigh also in the 350 c.c. class. This we are unable to explain.

CLASS 1. (350 c.c. TOURING SOLO.)

Closed and Open.

	Time. secs.	Formula.
S. M. Greening (348 Francis Barnett)	30⅘	1st
F. R. Colgrove (398 A.B.C.)	32	2nd

CLASS 2. (500 c.c. TOURING SOLO.)

Closed and Open.

S. M. Greening (248 Francis-Bennett)	30⅘	1st
W. A. Newell (398 A.B.C.)	31⅖	2nd

CLASS 3. (UNLIMITED, TOURING SOLO.)

Closed and Open.

F. McCardle (989 Harley-D.)	27⅖	—
H. E. Bolton (998 Indian)	30⅘	—
S. M. Greening (248 Francis-Barnett)	—	1st
W. A. Newell (398 A.B.C.)	—	2nd

CLASS 4. (350 c.c. SPORTS SOLO.)

Closed.

R. Weatherell (349 Weatherell) ...	25⅘	1st
L. F. Peaty (349 Hawker)	28	—

MEMBERS RESIDING IN ESSEX.

SPECIAL AWARDS.

Silver Vase (fastest time of any cycle).—L. McCardle (989 Harley-D).

Motor Cycle Watch (best formula of sports model).—K. S. Duncan (489 Sunbeam).

Binks Carburetter (fastest time touring model).—S. M. Greening (249 Francis-Barnett).

Silver Trophy (best formula of touring model).—S. M. Greening (249 Francis-Barnett).

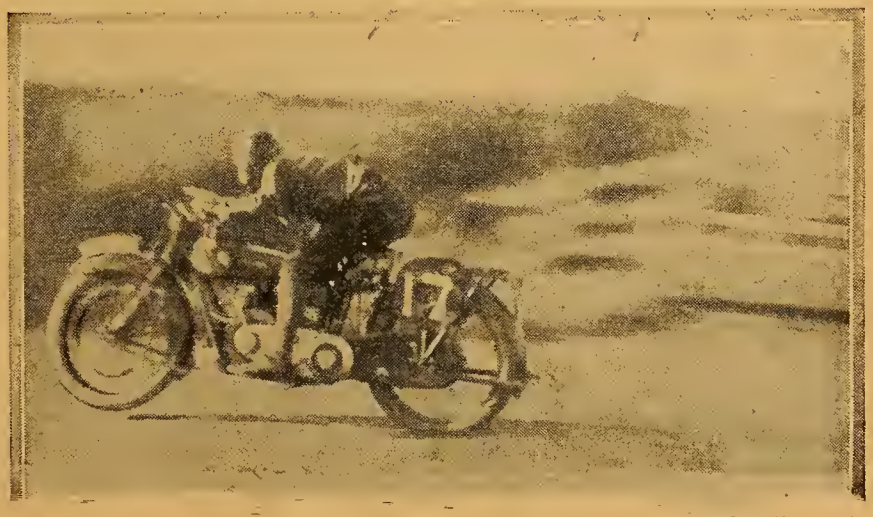
ANY MEMBER OF THE EASTERN CENTRE OF THE A.C.U.

Silver Cup (fastest time of the day).—L. McCardle (989 Harley-D.).

Small Trophy (best formula of sports model).—K. S. Duncan (489 Sunbeam).

Small Trophy (fastest time of touring model).—S. M. Greening (249 Francis-Barnett).

Small Trophy (best formula of touring model).—S. M. Greening (249 Francis-Barnett).



W. H. Norris (698 Raleigh) covering the standing start half-mile in 30⅘ secs. at the Essex County and Southend A.C. speed trials. The photograph shows his front wheel quite clear of the ground after passing a small bump.

UNEXCITING MANVILLE TROPHY TRIAL.

Obliterated Dye Causes Difficulty in last Saturday's Coventry and Warwickshire M.C. Event.

OF the thirty-four motor cycle entrants for the Manville Trophy Trial of the Coventry and Warwickshire M.C., on Saturday, every one faced the starter, but eleven failed to finish in schedule time. This large number of retirements was not so much due to the severity of the course, but rather to mischance and difficulties in following the route, which caused sundry delays and consequent hurryings.

Midland Test Hills.

Starting from Hearsall Common, Coventry, the 77-mile morning route included Swans Hill, Gravel Pit Hill, the Gutter, Lower Walton Hill, Hagley Wood Hill, Noah's Ark Hill, and Abberley Hill. Owing to a shortage of observers, only three of these acclivities were observed, a matter of small moment since, with the exception of the two last mentioned, they are not sufficiently severe to cause any trouble. On Gravel Pit Hill, for instance, there was not a single failure.

Again, on Abberley Hill there were only two failures, both owing to the greasy nature of the road, which caused skids.

J. Thomas (600 Humber) fell after passing the worst gradient, and D. Radford (688 Coventry Victor) wobbled and fell while passing another competitor. With these exceptions the performances were uniformly good, and it is difficult to distinguish the most meritorious climbs owing to the fact that many good riders took matters quietly and climbed slowly but steadily.

On the return journey the chief points of interest were New Walton Hill—a tricky climb with a greasy left-hand hairpin near the top—and an acceleration test on Weatheroak Hill. At the latter spot certain technical objections were raised by the police, but the event was carried to a successful conclusion.

The shallow but rocky water splash at the foot of Noah's Ark Hill is alarming only in appearance, and the hill itself has no gradient worthy of a modern machine.

Changing Up Too Soon.

Several spoiled their chances by changing up too early, although the performances on the whole were good. No official times are available, but the following showed up best: R. Grindlay (600 Humber), G. Kirby (499 Triumph), E. A. Barnett (346 Francis-Barnett), W. Brandish (600 Humber), H. Stretton Ward (499 Triumph), J. Thomas (600 Humber), L. Crisp (600 Humber). Amongst the sidecar performances which we observed, F. T. Sibley (499 Rudge sc.) and A. Perrey (770 B.S.A. sc.) were the best.

There were some further difficulties about the route on the return journey and some competitors reached the finishing point from the reverse direction.

SIDECAR T.T. NEXT YEAR.

No Amateur Race. Important Decisions at General Committee Meeting of A.C.U.

BY far the most important business transacted at the General Committee of the A.C.U. on Friday last was that connected with next year's Tourist Trophy Races.

It was, of course, obvious that the announcement that our premier road speed events should be held in England in June was altogether too sanguine, and that a return to the Isle of Man was inevitable. News that the I.O.M. Highway Board would sympathetically consider the allotment of three days to racing, announced by the secretary, was somewhat of a surprise, but it was further confirmed by Mr. Cowans, the Isle of Man representative, who stated that Mr. G. J. A. Brown had had an unofficial interview with the Board, which had declared that it would not be adverse to the favourable consideration of three days' racing on Monday, the 11th June, Wednesday, 13th, and Friday, 15th.

Sidecar T.T. Discussed.

Touching the question of a race for sidecars, which Professor Low's proposition at the Competitions Committee stated was "worthy of serious consideration," a lengthy discussion followed. Mr. W. H. Wells made strenuous opposition in view of possible danger, but other members of the trade present, Messrs. J. L. Norton, S. L. Bailey, V. Horsman, E. B. Ware, and F. W. Barnes were equally strongly in favour of the idea. Mr. Norton, however, feared that the wrong type of outfit might be developed, but Mr. Bailey took the view that racing models of to-day generally became touring models in the near future. Some argument ensued as to the advisability of limiting the engine size to 350 c.c.

Finally, it was decided that T.T. races should be held for 250, 350, and 500 c.c. solo mounts, and for sidecar outfits up to 500 or 600 c.c. Exact details will be left to the Competitions Committee, the chairman of which, Mr. J. W. G. Brooke, suggested that the 250 c.c. and sidecar races might be held on the morning and afternoon of one day, the 350 c.c. race on the second day, and the senior race on the third day.

Naturally, the question of an amateur race caused a good deal of discussion. Mr. Loughborough pointed out that the definition of amateur was not an insuperable difficulty, but that it was almost impossible to ensure a rider conforming to the conditions required. Mr. Quintin Nicol then said he thought that the A.C.U. had its hands full enough with the other races and the new sidecar event, so it was decided to abandon the amateur race for next year.

It was announced that no official results of the South-Eastern Centre reliability trial of July 8th had been issued, and it was therefore decided that unless these results were forthcoming in seven days no permit for an open event would be granted in future.

Regret was expressed that the Anglo-Dutch Trial could not be organised this year, but it was hoped that it would be possible to arrange it next year.

Nineteen applications from provincial clubs for affiliation to the parent body were accepted.

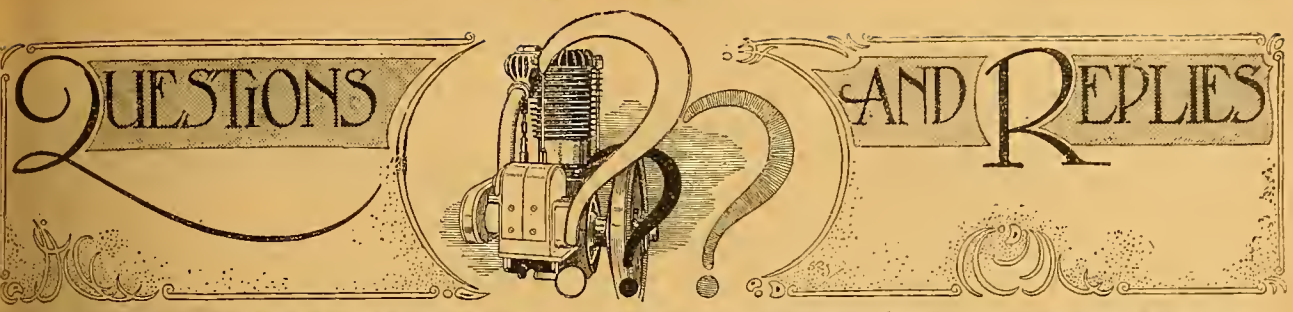
AT KOP ON SATURDAY.

H. H. Saddington (662 James) making fastest time of the day. He won every class that he entered.

NEXT WEEK—

"THE MOTOR CYCLE"

THREEPENCE.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

FUEL CONSUMPTION.

I have a 1920 two-stroke two-speed Clyno with petrol lubrication, and can only get 50 to 60 m.p.g. It is free from all air leaks, belt and clutch slip; the carburetter is an Amac; I am using a 24 jet. (1) Could you tell me what m.p.g. I should get; (2) and how to get it?—C.E.B.

Your machine should do at least 60 m.p.g. From your description everything appears to be in good order, and we can only suggest, therefore, that you check over (*a*) the petrol level (this should be about $\frac{1}{16}$ below the top of the spraying jets in the Amac carburetter); (*b*) the magneto timing (this should be set so that the spark occurs when the piston is on top dead centre with the ignition control $\frac{2}{3}$ retarded); and (*c*) the petrol supply system (which should be quite free from leakage at the petrol tap and pipe unions).

DISAPPOINTING PERFORMANCE WITH SIDECAR.

My machine is a 500 c.c. standard outfit as supplied by makers, and the gears are 5⅓, 8½, and 16½ to 1 (chain and belt). The machine is rather heavy, and so is the sidecar; and since my weight is about 15 stone, with an adult passenger in the sidecar, the unfortunate engine has something to propel. The engine is clean; compression very good; timing standard; new valve springs; B. and B. carburetter, single jet, size 36. The roads over which I go are pretty severe for a small engine and are so bumpy that what speed I get is very rapidly knocked off. I find that on the slightest gradient second speed is required, and some quite moderate gradients almost require low. The engine runs very hot. I have gone through the various causes mentioned in "Hints and Tips," and the only one that seems to fit the facts is "Too high a gear." The engine will run but will not increase speed after the throttle has been opened more than half-way. I cannot explain exactly, but when I open the throttle more than half-way I can tell I am not getting any value for it. Moreover, the fuel consumption is bad, due, I suppose, to the amount of second gear work and continually having to shut off the extra air on the slightest gradient to prevent knocking. (1) Would a lower gear be better? (It would still further reduce the speed of the machine.) How could a lower gear be obtained? The front sprocket has 14 teeth and the makers do not supply one with less. (2) As I only use the machine about once a week for a run of 25 miles or so, do you think a ⅞in. belt would do the work and reduce the gear? (3) The machine was originally fitted with 26in. × 2¾in. tyres. I have on now 26in. × 2½in. × 2¼in. This would raise the gear, I suppose. Would the smaller tyres be better? (4) Should I fit a larger jet. 35 is standard for the machine; I am using a 36. I have a 37, but have not tried it as the engine gets so hot. (5) Am I right in supposing that with such a heavy load and bad roads a 500 c.c. engine is bound to run pretty hot. I do not think the engine gets too hot when I have the sidecar empty. (6) Would a variable jet adapter give me any more power?—J.O.E.

(1) As you do not state the make of your machine we cannot tell you whether its performance is similar to other models of

Important Dates.

Wed., Oct. 4th, to Sun., Oct. 15.—Paris Salon.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

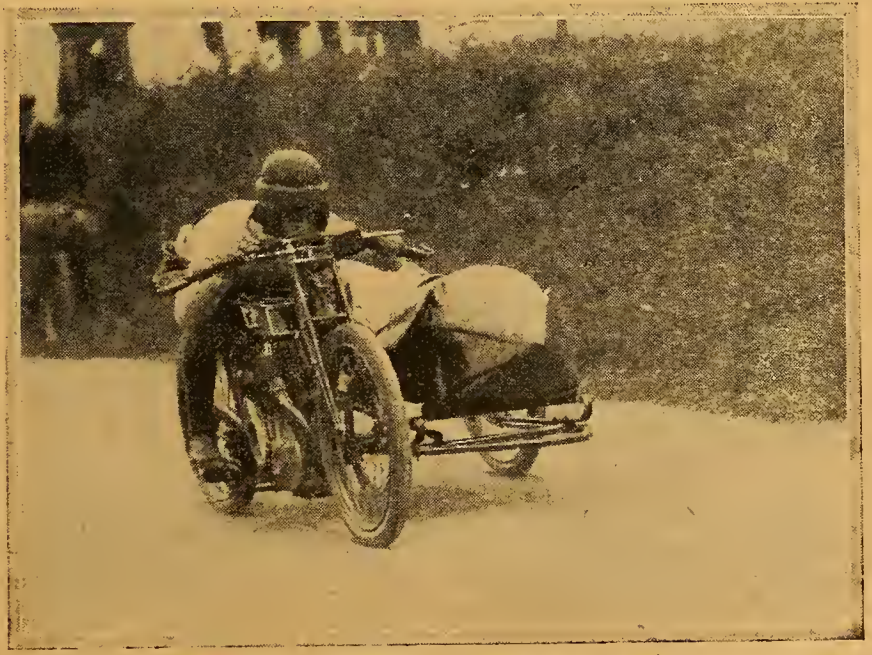
Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd—Olympia Motor Cycle Show.

Tues., Dec. 26th and Wed., Dec. 27th.—M.C.C. London-Exeter Run.

Sat., Jan. 13th to Wed., Jan. 24th (1923).—The Belgian Salon.

Fri., Jan. 26th to Sat., Feb. 3rd (1923).—Scottish Motor Show.



CAUGHT AT SPEED. An impression of B. Fleming on his Sunbeam sidecar at a hill-climb held recently by the Basingstoke M.C.C.

the same make; however, with a 500 c.c. machine used with sidecar a 5⅓ to 1 top gear is rather high; at the same time it would not be advisable to use an engine shaft sprocket with a smaller number of teeth than 14. (2) A ⅞in. belt would be under-sized for your machine and load and we could not recommend it, although it might answer your purpose; its life would be short. (3) The fitting of larger tyres has the same effect as raising the gear, and as you apparently do not use the machine extensively it might possibly be advisable to use the smaller diameter covers. (4) A larger jet should not be necessary. (5) A 500 c.c. machine even when used with sidecar should go almost anywhere and be capable of maintaining an average speed of about 20 m.p.h.; it should have a maximum speed with sidecar of at least 38 m.p.h. There is no reason why a machine of this capacity should overheat if it is in good order. (6) A variable jet adaptor would not necessarily give you more power, but it would be of great assistance when tuning up.

FITTING A GEAR BOX.

? I am proposing to fit a four-speed gear box with belt and chain drive on my motor cycle. The belt pulley is 6in. in diameter and the belt rim is 19in. Being desirous of obtaining a 4½ to 1 gear on top, what numbers of teeth on the engine shaft sprocket and countershaft sprocket are required?—C.L.

If you are fitting a four-speed gear box to your machine, we do not recommend that you have the belt pulley on the box any smaller than 8in. in diameter, as otherwise on the low gears you will probably get excessive slip. It is not much use attempting to give you the figures you ask for, as usually the size of the countershaft sprocket is determined for you by the manufacturer of the gear, and no alternative selection is offered, therefore, the only variation possible is obtained by altering the size of the engine sprocket. When you know the former you can calculate the number of teeth by the aid of the tables usually given in the gear manufacturers' booklets.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"J.B.E." (Barmouth)—348 c.c. Douglas; B. and B. carburetter.

"W.H.L." (Penzance).—398 c.c. A.B.C. after 3,000 miles running.

"A.H." (Pontefract).—349 c.c. A.J.S. touring model B.

"H.E.R.M." (Winchester).—349 c.c. A.J.S., B1; W.S.R. variable jet; suitable settings for starting, fast and slow running.

"F.R." (Romsey). 348 c.c. o.h.v.; F.N.: suitability for touring.

"G.L.L." (Manchester).—348 c.c. two-speed Douglas: tuning for speed regardless of economy; Wex carburetter.

"D.S." (Sherborne).—249 c.c. Velocette.

"H.R.R." (Towyn).—398 c.c. A.B.C.: tuning, gear ratios, and jet sizes for fast solo riding.

"L.M." (Manchester).—170 c.c. McKenzie.

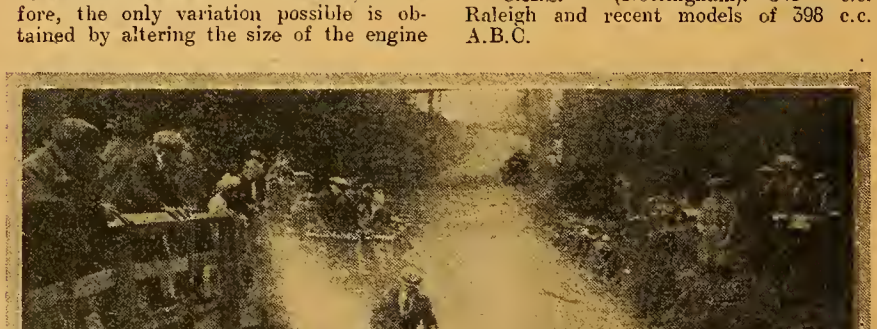
"R.M." (Tavistock).—Binks carburetter on 989 c.c. Harley-Davidson and 348 c.c. Douglas.

"A.V.V." (Wembley Hill).—McKenzie lightweight.

"A.J.C." (Stockwell, S.W.8).—398 c.c. A.B.C.: experiences in tuning.

"H.E.W." (Moorgate, E.C.2).—Two-seater sidecars, for two adults.

"C.A.S." (Nottingham).—348 c.c. Raleigh and recent models of 398 c.c. A.B.C.



WATERSPLASHES EVERYWHERE. North, south, east or west, the crossing of unbridged streams is a feature, if not *the* feature, of motor cycle trials. While providing much fun for the spectators, "watersplashing" tends to be overdone. A scene in the Levis Trial.

The Dutch Championship.

The championship of Holland, together with a gold medal and other awards, has been won by A. Steensma, riding a 499 c.c. Dunelt motor cycle.

Confusion of Addresses.

There are apparently half-a-dozen Uptons in England; and we are asked to state that the Alexander twist grip, described in our issue of September 28th, hails from Upton, near Birkenhead.

Change of Address.

New and extensive premises, a few doors west of the present address, will be occupied by the Service Company at the end of this month. The new address will be 273-274, High Holborn, London, W.C.

Changing the Name.

The lower-priced V-type windscreen made by the Sandham Engineering Co. Ltd., of Gray's Inn Road, will in future be known at the Popular model. Hitherto its name of Junior conveyed the idea that it was only suitable for fitting on small sidecars.

Cross-Country Italian Race.

In the twenty-four-hour race between Milan and Naples, held during September over a distance of 887 kms. (551 miles) two Norton machines were first and second in the 500 c.c. class, being ranked also second and third in the unlimited category.

Warning.

According to the secretary of the A.C.U., a person giving the name of H. R. Melville Freeman, and using cards bearing the title and address of the Auto Cycle Union, is abroad in London. We are advised that no person of the same name is on the staff or membership list of the Union.

On Such Small Things—

It is rumoured that owing to the size of the tyres on Pullin's Douglas not complying with F.I.C.M. dimensions, his mean speed of 83.76 m.p.h. on the Bois de Boulogne cannot be recognised as a record. If this is so Bernard (9½ Indian) will come up into the record list with a mean speed of 81.5 m.p.h.

The Sport in Russia.

In spite of the extraordinary conditions now prevailing in Russia, speed trials were held on the 27th and 28th August over a course of 556 versts, Moscow - Wyschnu - Wolotschek - Moscow, which Malewitsch, on a pre-war 499 c.c. Triumph, finished first, in 11h. 28m. 41s., or at an average speed of approximately 30.2 m.p.h.

Catalogues Received.

The County Legging Co., Franche Street, Perry Bar, Birmingham: Illustrated booklet of leather leggings.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postat Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements the mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way, the seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, ½%. All deposit letters are dealt with at Dorset House, Tudor Street London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally serious, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

A.B.C. Combination, 1922, Gracemill sidecar, Easting, dynamo lighting, speedometer, licensed, insured, perfect; nearest 80 guineas.—1, Alexandra Rd., Kingston. [6411

"Recommended by"—

Over and over again we find new customers introduce themselves with these words, and it exemplifies the truth of an old slogan of Godfreys:

"Our Sales increase our Friends,
Our Friends increase our Sales."

Can GODFREYS be of service to YOU?

If it is a new machine you require you will find a selection of all the latest models at Godfreys, who can give immediate delivery of practically any well-known make.

If price is a consideration you have now an opportunity to secure a brand new (shop soiled) machine at a figure which only the necessity of clearing old stock renders possible.

Should you desire a sound secondhand machine we can supply you with one which has been thoroughly overhauled in our own workshops, and we give the same guarantee as issued with a new machine.

Should you wish to exchange your present mount, this can be easily arranged if it is a reasonably modern machine. Send full particulars stating the new machine you prefer and we will quote you our best allowance price. Further, the difference between the value of your present machine and the price of the new one can be paid by 12 equal monthly instalments.

We will sell you any new or secondhand machine on our gradual payment system on the following terms:—

4% only is added to purchase price.

You pay one quarter as a first instalment and the balance in 12 equal monthly payments.

MAY WE SEND YOU OUR FULL LISTS?

If you have any tyre troubles—end them by using the Challenger Patent Puncture Sealing Tubes. Any size supplied from stock.

Sample section and prices on request.

AN INVITATION

. . .

Thousands of people would like to possess a motor cycle but have not the ready cash. In addition, perhaps, our usual extended payment terms do not quite meet individual requirements.

. . .

IF you are in this position, will you kindly write us, stating exactly what you wish to purchase and approximately how you wish to pay. Your enquiry will receive careful consideration and of course be treated as strictly confidential.

. . .

FOR your guidance, we have the following brand new motor cycles and combinations which we offer at rock bottom prices to clear.

. . .

IT WILL PAY YOU TO——*BUY* NOW.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS

122, Shortlands Road,
Sittingbourne, Kent.
August 17, 1922.

Mr. Brodrick,
The South-Western Appliance Co.
Dear Sir,
The St. Helier Building arrived on Saturday, two days before promise of delivery, and we are more than satisfied with it.
We erected it on Wednesday and it went together like clockwork. I am very pleased we left the order with you, as all who have seen it think the value is remarkable and admire the artistic appearance. Trusting and believing it will get you further orders from this district.
Yours faithfully,
THOS. F. KENNETT.

FELLOWS new magnetos always in stock, any degree for any engine, also a large selection of second-hand magnetos, all makes.

GUARANTEE.—Every magneto, no matter what the price or make, is guaranteed by us. Not merely that same is in good order at time of sale, but a plainly written statement that we guarantee each machine against all defects for a period of 12 months. This, we maintain, justifies us in charging a few shillings more than certain of our competitors.

RELIANCE cordially invite customers to their works to see any of the above on test. Magneto list, giving full particulars, sent upon application. It will pay you to deal with a firm of repute. —Reliance Magneto Repairing Co. (1914), 283, St. John St., London, E.C.1. Tel.: Clerkenwell 4290. T.A.: Remagco, Smith, London. [9816

You are Sure

of satisfaction when you deal with me, as every article is sold on the "Money back if not satisfied" principle.

ANY PART FOR ANY MODEL

Douglas

BY RETURN OF POST.

Here are some of my Specialities :—

TWIN RINGS. Two rings in each groove give more power—perfectly gas-tight joints—prevent carbonising as oil cannot pass them—wear indefinitely—need no running in. For 2¼ h.p. Douglas **1/6** each. 4 h.p. Douglas **1/8** each. Williamson, Sunbeam 2¾ h.p. and Humber twin, **1/8** each. Sunbeam, 4 h.p. All Blackburn 4 h.p. engines, Triumph, Coulson, Sheffield Henderson and Wilken 4 h.p.; B.S.A. 3½ and 4½ h.p. Rudge, Singer 3½ h.p. New Hudson, L.M.C., J.A.P., 8 h.p. A.J.S. etc., **1/9** each. Other makes quoted for on application.

ZOOM ! ZOOM ! ! The fashionable and efficient exhaust system. Adds pounds to the appearance of any Douglas and lets the engine give off its full power. In beautifully burnished copper, price **30/-**. In burnished nickel, price **33/6**.

THE TONY COMBINED ALUMINIUM FOOTBOARD AND FOOTRESTS. Beautifully finished—giving a

natural riding position. A real solid cast job. Something that lasts for ever. Price **30/-** per pair complete.

20% POWER INCREASE. Get more power from your Douglas by fitting **IMPROVED CYLINDERS.** They have stream-lined ports, larger fins and more of them. If you have a 1912–1921 model try them and you'll be surprised. For 2¾ h.p. Douglas, price **50/-** per cylinder. For 4 h.p. Douglas, with detachable heads, so that you can de-carbonize your engine and overhaul your valve seatings without dismantling your engine, **65/-** per cylinder.

THE CORAM PISTON, fitted with radiating internal fins. Correctly designed, much lighter yet stronger than standard. Fitted with the patent twin rings in one groove. Complete with rings and gudgeon pin. Price **29/-** per pair. Insist on having these fitted when your mount is next down, and you'll never regret it.

CORAM'S PATENT COMBINED ALLOY VALVE CAP. My latest idea. Never blows out, never seizes in the threads. Prevents knocking and overheating. A real boon. For 2¾ h.p. and 4 h.p. Douglases. Price **4/-** each.

Reprint from "Sparklets" Columns in "The Motor Cycle."

THE REPAIR OF HUB GEARS.

On many occasions we are asked where parts and replacements for Armstrong and Sturmey-Archer hub gears can be procured. We recently paid a visit to the works of the Cromwell Engineering Co., 327, Putney Bridge Road, London, S.W.15, and were extremely well satisfied with the way repairs are carried out to epicyclic and other types of motor cycle gears. All parts are made on the company's premises, and all repairs are skilfully executed. It is interesting to note that during the war the Cromwell Engineering Co. were doing very accurate gauge work. They have special machinery for making gear wheels and for cutting the internally toothed rings used in the two hub gears mentioned. Repairs are also executed to countershaft gear boxes.

FOR SOUND GEAR REPAIRS.

REPAIRERS.

WELDING.—Cracked, broken, or scored welded and machined; aluminium w. speciality.—Leeds Motor and Welding Co., P Lane, Leeds.

ENAMELLING, Plating. Tanks enamelled a handle-bars, etc., plated.—Send to Murray Works, Union St., Coventry. Platers and e to the trade.

WE can supply internal grinding spind jigs, specially designed for grinding on the lathe.—If you are interested, write P Park Rd., Rugby.

CYLINDER Regrinding and fitting of new p our speciality. We also supply piston gudgeons, valves, guides, bushes, etc., for a of engine.—C.M.D.

PISTONS complete for all standard makes fr to 21/-; despatched return post.—C.M.D.

CYLINDERS Reground and fitted with new rings, and gudgeons complete; 2¾h.p. 20/- each; 2¾h.p. Enfield, 25/-; 2¾h.p. J.A.P 3½h.p. and 4h.p. Triumph, Rover, J.A.P., B.S. beam, Rudge, etc., 35/-.—C.M.D.

2-STROKES.—Levis, Villiers, Velocette, Allda Hudson, etc., 35/- complete; all returne hours.—C.M.D. Engineering Co., Leamingto 'Phone: 768.

BAT Repairs.—You cannot do better th your machine to the makers, who pos necessary tools and jigs for alignment, thereb ing a satisfactory job.

BAT Gear Box Parts.—We can supply a from stock.—BAT Motor Manufactor Penge, London, S.E.

FRAME Repair Specialists.—New tubes, fork cut down, conversions, enamelling and at lowest prices; quick despatch.—A. E. and tain, Bently Lane, Walsall.

CONVERSIONS to Countershaft in 7 day boxes in stock; frames repaired and see Parts and Accessories.—Derrington, Craft New Malden. 'Phone: 256.

TRIUMPH Cylinders Reground and fitt genuine Triumph piston complete with ri gudgeon; 35/6; returned in 24 hours; J.A.P., Rover, etc., same price.—Below.

WE Specialise on Engines, complete overha part made to pattern or drawing, accura only.—Harvey and Co., 47, South Lambeth Rd (150 yards from Vauxhall Station). 'Phone Brixton.

HARLEY-DAVIDSON Repairs and Complet hauls, by late works foreman and mechanic.—Private address, J. F. Boughton, tison Rd., Child's Hill, N.W.2.

SCORED Cylinders Repaired in 48 hours, pr per cylinder; engines rebushed and ove 35/-; twins, 40/-; aluminium repairs of all Godwin's Garage, Sunbury-on-Thames.

STURMEY-ARCHER Hub and countershaf repaired and overhauled. Officially appoi Sturmey-Archer Co. Lightning delivery.— Motors, Forfield Place, Leamington Spa.

WELDING.—Broken flanges, aluminium cases, cracked water jackets, valve s welded and machined complete; scored bore in and ground to existing pistons.—Below.

CYLINDERS Reground, new pistons fitted c in cast iron or aluminium.—West Londor ing Co., Essex Place, Chiswick. 'Phone: C 536.

SUNBEAM Motor Cycles.—Repairs, overhaul renovation of Sunbeams by Sunbeam ex the makers' own depot, 57, Holborn Viaduct, Competent and satisfactory service assured.

CYLINDERS Reground, accurate finish, c sion guaranteed; Triumph, Rover, Premie 2¾h.p. Douglas, 25/-; 70mm. bores, 30/-; ri gudgeons complete, twins low price.—Below.

PISTONS, all patterns, oversize specialist price.—Below.

PISTON Rings, oversize or stepcut, 2/-; st 1/6; return post; none better. Thous testimonials.—Patent Rings, 30, Wigan Rd., A

ROC 2-speed overhauls; Humber, Rex, V.S., Alldays, Roc countershafts; manufactu all Roc parts.—J. Connolly and Co., Mfg. En New Crown Works, Lower Ford St., Coventry

HARLEY-DAVIDSON Repairs and Overha are now able to put work in hand withou skilled staff under careful supervision.—Harley-I Motor Co., Ltd., 74, Newman St., London, W.1.

CYLINDER Grinders.—We regrind cylinders oversize pistons. Douglas 2¾h.p., 18/9 pe der and piston complete; J.A.P. or any other bore, 30/- complete; Triumph or any 85mm 35/- complete. All work done on Heald and C machines. A first-class job and quick delivery teed.—The Edwards Engineering Co., 225, Acto Chiswick, W.4. 'Phone: Chiswick 1385.

The 1923 T.T.

THE decision to hold Tourist Trophy races for 250 c.c., 350 c.c., and 500 c.c. types respectively, as recorded in last week's issue of *The Motor Cycle*, is again reviving the question, so often discussed in these columns, as to whether the capacity of the Senior T.T. machines should be reduced. The purpose of the Tourist Trophy races is to develop a type of motor cycle for touring purposes, and not, as some might think, merely to increase its speed. Brooklands exists for the latter purpose, and the Isle of Man course was chosen because it provided conditions met with by the tourist. But for the Tourist Trophy races the change-speed gear might have been longer in materialising, and the development of the sidecar machine retarded in consequence. A gear box is not an essential on a Brooklands racer. Speed is not the chief factor in a tourist machine; within limits, economy is more important. Therefore if the T.T. races eventually develop the ideal types of motor cycles for the public, they will have served their purpose. True, the racing machine of to-day is the touring motor cycle of to-morrow, but if, instead of encouraging the evolution of the 80 m.p.h. tourist's mount, the races produced one which halved the fuel bill, a better purpose would be served.

Effect of Reduced Capacity.

One way to bring this about is to reduce engine sizes. Speed must, of course, be the deciding factor in the race, but instead of endeavouring further to increase the speed of the 500 c.c. machine, an attempt should be made to equal the performances of this type with one of smaller capacity.

Last year's Senior race proved that this event has developed into a race between the most daring riders. It is questionable whether the designers of any of the motor cycles which finished learned anything to assist them in producing faster machines next year. From a technical point of view, undoubtedly, the 350 c.c. races produced more data. It would then appear that the I.O.M. course has no more to teach designers of 500 c.c. solo machines.

500, 350 and 250 c.c. or 350, 250 and 175 c.c.

It is not many years ago that the 250 c.c. engine was regarded as a toy. The Lightweight Tourist Trophy has developed it into a thoroughly practical proposition and capable of speeds exceeding those of the 350 c.c. class a few years ago. Now an even smaller type is coming into prominence, but has yet to be proved and developed, hence it seemed natural to suppose that the 1923 races would be for 350 c.c., 250 c.c., and 150 or 175 c.c. types.

As has frequently been pointed out in *The Motor Cycle*, the so-called lightweights of 250 c.c. are little, if any, lighter in weight than the senior contestants. If the governing body as organiser of the T.T. races exists to develop the tourist motor cycle, then its duty is to consider economy. The term lightweight is a misnomer while there exists a large number of lighter machines. The 350 c.c. engine now equals in performance the 500 c.c. type of pre-war days, and the efficiency of the 250 c.c. unit approximates to that of the 350 c.c. of a decade ago. With proper encouragement the 150 or 175 c.c. unit should take the place of the pre-war 250 c.c. engine.

To Encourage the Ultra Lightweight.

Not for a moment do we suggest a race for motorised bicycles, but everything should be done to foster the development of small motor cycles, cheap to run and capable of being produced at low initial cost.

An index to the advertisements in this issue will be found on the page facing the back cover.

Ad Nauseam.

GERMANS are patient fellows. In pre-war days they manufactured the only decent waterproof glove I have ever owned. Youngsters who have never seen one may be interested to hear that it was as thin and flexible as the lightest kid; that it was absolutely and positively storm-proof; that it furnished a perfect grip for levers—yes, even for wet metal; that it was not expensive; that, although waterproof, it was never really "sweaty" inside; and that it was durable—my 1910 pair have only lately dropped so far to pieces as to be absolutely unwearable. Yet, although many clever fellows are seeking a living in the rubber industry, no Briton has yet managed to produce a similar article. Here is a screaming opportunity for brains and capital. If anybody can produce a glove with these qualities, and back it by two-pennorth of very medium quality salesmanship, he could sell perhaps half a million pairs this winter. Every motorist would want them, plus not a few people who don't motor.

Puncture-Sealing Tubes.

MY own experiences of Challenger tubes have been so satisfactory that when two readers greeted my recent reference with complaints, I forwarded them to the manufacturers. They reply that complaints average very considerably less than 1 per cent. of the tubes sold. In these rare cases, the usual explanation is that a tube has been heavily chalked in fitting; that the nail or other puncturing instrument carries chalk into the patent tube; and that the chalk prevents proper sealing of the black mastic. Other complaints have been ascribable to bad fitting. They consider that if the tube is properly fitted in the first instance, with a minimum supply of chalk, satisfaction should be assured. I can only add that in two years of continuous use, I have been perfectly satisfied. One objection is, of course, common to all tubes listed at higher prices than the plain tube—your loss will be increased if a cover for any reason comes off the rim—e.g. through a skid, lurid cornering, a burst, or violent braking. But my luck has been well in so far.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

More Sales?

THERE are thousands of potential motor cyclists in the country, who fall into three classes, viz.:

(i.) Those who want a motor cycle, but cannot yet afford one.

(ii.) Those who intend to buy, but wait for "something different," or to be convinced that prices have touched rock bottom;

(iii.) Those who would relish the sport, but are too inert to take the plunge.

Motor cycle manufacturers must look towards (ii) and (iii.). The last point hinges on energetic salesmanship. The second class variously desire lighter machines, cheaper machines, a more "all-weatherish" machine, cleaner machines, more comfortable machines; prices have probably touched bottom until the motor cycle trade is Fordised by some Napoleon. In brief, bigger business hinges on more forcible salesmanship, coupled with a designer who will do what the Ner-a-car people attempted last year, and make a bold effort to meet the notions of those who do not fancy the conventional touring models.

Every Rider a Salesman?

THE welfare of the private rider is so bound up with the welfare of the industry that in these trying times every amateur ought to regard himself as its debtor and ally. If he owns a decent motor

Occasional Comments.—

cycle, he owes enormous pleasure and considerable convenience to the people who made it. He should pay his debt by regarding himself as an honorary salesman. He will not get his reward in the form of cash commissions, as the professional salesman does. But he will get it none the less. Not until the manufacturers are relieved of eternal financial anxiety can we expect that generosity of service, boldness in design, and perfection of material and workmanship which every decent producer longs to give the public if only commerce is stable enough to give him a free hand. The average professional seller of motor cycles is usually a poor salesman through no fault of his own. He cannot know his rather impecunious public really intimately. He generally has other irons in the fire—a repair shop, cycle trading, possibly gramophones and prams and hiring out Fords as well. If the industry provides us with an honest 'bus at a fair price, we can do it a good turn by advertising the 'bus, and we shall reap our reward in due course.

Sanity Plus Enthusiasm.

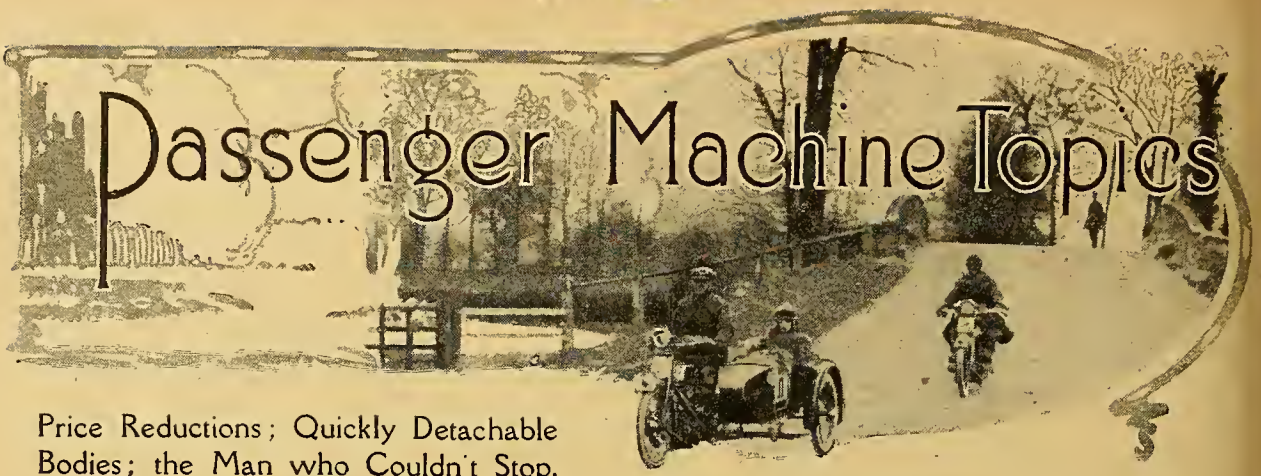
I HAVE sold thousands of motor cycles in my time without, of course, a penny of commission. When I come across a good machine, and eke make an acquaintance whose days would be brightened or whose labours would be lightened by owning a sister 'bus, I coax him to buy one, and he has repeatedly done so. On the rare occasions when I get stuck with an inferior machine, or a tolerable machine marketed by a stupid firm with bad business methods, I keep people off it; the sooner a "dud" concern feels the draught. the better for everybody concerned. I also try to keep my head. I never encourage a nervous elderly man to buy an S.S. 80 Brough Superior, nor do I humbug some 16st. resident in Devon into buying a single-geared baby two-stroke. (I have known professional salesmen guilty of both these crimes.) Some riders do not recognise the immense power which they wield. Cynical outsiders expect a professional salesman to lie (though the best salesmen do not lie). But what the private rider says, usually goes. The quiet, observant man, who is watching and wondering, never forgets when he hears one of us make some such remark as:- "Well, all I can say is that the machine has done me awfully well. I've had no trouble, I haven't replaced anything except tyres, she is comfortable and reliable, and I find the firm very decent people to deal with." The listener may not buy one himself there and then, but he will quote what you say when some friend of his is investing. It seems to me only just that we should pay for our happy hours on the road in this kind of way; and our debt is due not only to the financiers who have risked their capital and to the designers who have spent their brains, but also to many horny-handed men in modest streets, for whom a flourishing industry means regular work and freedom from those paralysing domestic anxieties which seldom come our way with any real acuteness.

IN ALMOST ANY TRIAL THIS YEAR.

This splash is the merest trickle compared with some which have been included in recent trials. Although of little value except in proving the water-tightness of the ignition system, the negotiation of a watersplash certainly provides some fun while it tests the driver's judgment.

Queer Carbide About.

OF course we should all like to use electric lamps, but dynamos are costly and do not realise a fair percentage of their price when we make room for a new machine, to which the old dynamo can seldom be neatly or easily transferred. (A hint for the trade in that. If only standardised design enabled us to take a dynamo off our 1922 Buzzbuzz and put it straight on to our 1923 Bark-Bark we should *all* buy dynamos instanter.) In the meantime we use acetylene. And there is some very funny carbide about. I know just enough chemistry to give a wide berth to ribbed blue bottles with red labels. Otherwise my mind is a blank on the subject. So I cannot explain why it is that my pet generator functions admirably on one tin of carbide, and yet when I buy another tin the burner essays the Morse code. As a bland ignoramus I should say that some of the carbide on the market generates more steam than gas, and steam is hardly illuminative. But I daren't say this lest some earnest young man in large horn spectacles with two dozen letters after his name should trample on me ruthlessly. So I will confine myself to the safe remark that carbide, beer, taxes, roads, and several other things aren't quite what they used to be. I have not found the same inconsistency in different tins of the same *marque*, nor can I condemn wholesale all carbide bought in bulk. Gentle reader, if you stumble on a brand of carbide which carburets evenly I strongly advise you to stick to it. Because some of them don't



Passenger Machine Topics

Price Reductions; Quickly Detachable Bodies; the Man who Couldn't Stop.

By "FRIAR JOHN."

HOW is it that petrol, a few sidecar outfits, and certain small cars are within shouting distance of pre-war prices, and yet many other things are still double the cost? Houses with garages, for instance, in a "desirable" locality are still double their old value. Beef, butter, and beer, I understand, are still double. Of course, there are a thousand and one logical reasons why things in general should be just as they are and why they cannot at the moment differ one iota from what they are—political economists tell us so. However, I do know I can buy a thoroughly reliable sidecar outfit for less than a hundred pounds, and that petrol is only 5d. per gallon more than I was paying in the old days. Vacuum flasks and tyres one can nearly beg. The thought of this will be a palliative on that day when I sign away £4 for taxation, and £6 or £7 for insurance, and £10 for garaging, and —but we will leave the rest. I *was* going to talk about depreciation.

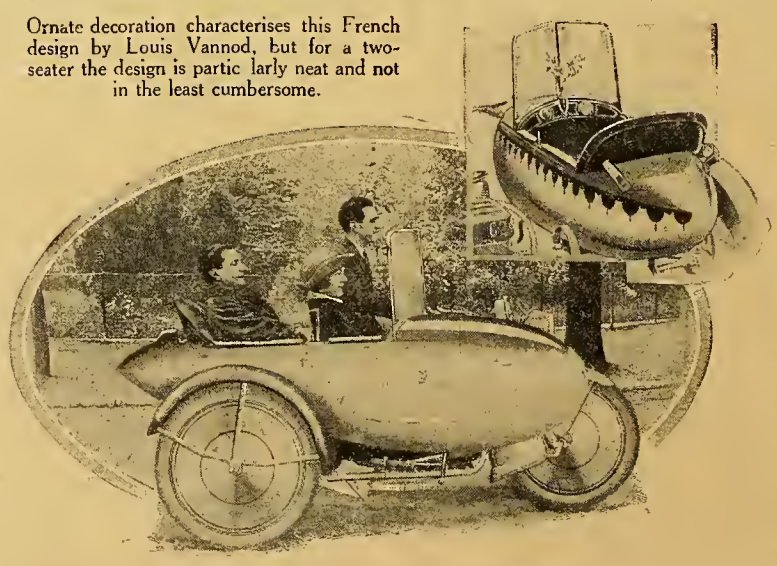
WHEN sidecars were first introduced, and for years afterwards, the advantage of quick detachability was a big talking point. But the popularity of the complete outfit has almost killed the double-purpose idea.

The lover of a highly-tuned solo machine has only luke-warm interest in sidecars, as a rule, and the ardent sidecarist is usually a thoroughly scared individual when riding a solo machine on anything but dry and smooth-surfaced highways.

A point that manufacturers should watch, however, is the quick detachability of the body from the chassis. The continual attaching and detaching of the chassis from the machine may cause faulty alignment, nuts may work loose more quickly, and at the best it is an awkward one-man job, but the lifting of the body from the chassis can do no harm. Whilst the line of least resistance continues to be taken by makers in their fitting of the transmission on the near side, all bodies should be made quickly removable. Surely, only a little favour to ask for; and when I say quickly and easily I mean quickly and easily, not confusing the term with contortionistic exercises in the nose and seat of the sidecar.

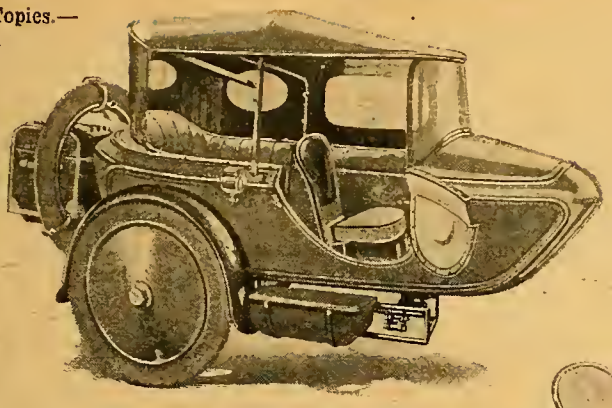
LAST year a colleague returned from the Paris Salon so eulogistic regarding the sidecars produced in France that this year I determined to visit the Gay City to see these wonders for myself. I was disappointed, but this was not due to any exaggeration of the qualities of last year's models, but fashion has changed, and instead of the splendid examples of French coachbuilding art which were exhibited last year, interest in the sidecar seems to have gone, and only a few mediocre types were exhibited.

In order to justify himself, my colleague has presented me with a photograph of a model which particularly appealed to him last year, and I give it here together with an illustration of the model exhibited in *Les Invalides* at this year's Salon. There is some difference, but all the same I think the present-day model is a standard production, while the 1921 affair was merely built for the exhibition. There is a lot of this sort of thing at shows, and my companion pointed out several specimens, in both the motor cycle show and the car salon.



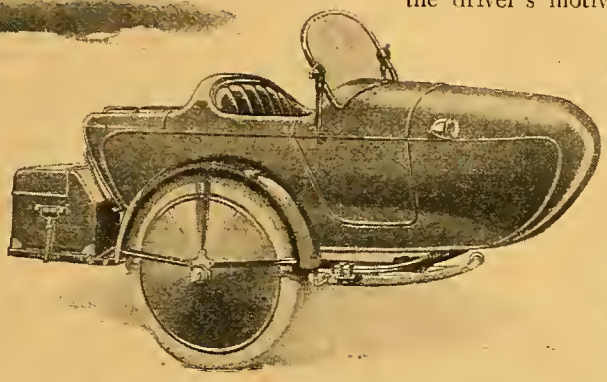
Ornate decoration characterises this French design by Louis Vannod, but for a two-seater the design is partic larly neat and not in the least cumbersome.

Passenger Machine Topics.—



which were exhibited last year and have evidently been wrapped up in cotton wool in the maker's warehouse meantime.

There was a really handsome sidecar attached to the Lutece machine, a miniature yacht finished in natural woods—mahogany and bird's-eye maple—and copper fastened. Nevertheless this was little if any better finished than the Berthon Boat Co.'s sidecar at last year's Olympia.



There is distinction and grace in both these A.G. models, made by A. G. Garnier, Paris. The upper illustration shows that the French were in no way behind us last year in their idea of what a fully equipped sidecar should be. The lower illustration shows that this year's model has been simplified in appearance.

SOME Victorian manufacturer made a fortune by "inventing" the safety-pin, and everybody admitted that the idea was cute and brainy; but it was an Egyptian invention for all that—about 2,000 years old. At the Paris Salon car makers and the public were enthusing about windscreens for rear seats which were fitted to hinged dashes exactly like those on many of our sidecars, in fact like the Turner sidecar of ten years or so ago. Car makers have been a long time recognising the value of this idea, but they did not forget to make it a talking point in Paris.

IN last week's *Autocar* a correspondent relates an extraordinary incident of a driver of a sidecar who was unable to stop his machine. The writer, speaking of cars getting out of control, said of the particular outfit that collided with his car:—

"... The magneto switch wire had been carried away, the throttle was not working, the gear lever was jammed in second, and the rider forgot the clutch. The front brake was not working and the rear one was not powerful enough to stop the machine. In despair the driver, who confessed he lost his head, turned off the main road in the hope of eventually using up his petrol; but he met my car instead, fortunately with no more damage than smashing up his machine and carrying away a running board and wing from my car." The writer continues, "I did all I could for the party by taking them on to their destination, but it is easy to see that there were all the elements necessary for a fatal accident, for a couple of hundred yards ahead was a right-angled turning with a stone wall, while a farm road led away in an enticing direction to the river with seven feet of water only fifty yards round a corner."

It is futile attempting to analyse the driver's motives for turning up a bye-lane under the circumstances. Maybe you and I would have done likewise.

The sudden realisation of being unable to regulate the speed of his machine owing to the jamming of the throttle probably caused the driver to lose his head and forget the clutch. But every sidecar should possess a rear brake sufficiently powerful to eventually stop the engine. It is past my comprehension how owners dare risk, as hundreds do, their passengers' and their own necks by riding outfits which are in the most decrepit condition.

I MET a friend recently whose habit it was before the war to order a new outfit each November when he visited Olympia. I asked what his choice was to be next month. He shrugged his shoulders; it was a shrug that spoke volumes. It meant everything that is horrible from an enthusiastic motor cyclist's point of view. For what can be worse than going along the blazing stands at the show knowing that none of the new models can be yours for the ensuing year. That was the burthen of his song. My friend couldn't sell his 'bus and had thoroughly made up his mind that it was impossible to sell it; that he wasn't going to Olympia; that if an accident did happen and he found a customer he should eschew

A coupé hood and screen by A. W. Ayden, 159 Hornsey Road, Holloway, London, N.7. A point of interest is that there are no loose side curtains to fit when a complete coupé effect is desired.

Passenger Machine Topics.—

motor cycles for ever; that the pastime wasn't worth the candle; that the country's trade was going to the dogs.

The day was typical of the summer we have had, damp and drizzling, and he went his way with a countenance thoroughly in keeping with his mood. I know I shall meet him again in the thronged aisles of Olympia, his pockets stuffed with catalogues. I know he will drag me by the arm to a particular stand and inflict on me his ebullient enthusiasm concerning some new model he intends to purchase. He will have found a customer for his old 'bus, or else conferred with one of the good Samaritans who say, "Old machines taken in part exchange."

THERE are still thousands of sidecarists using acetylene lighting, and will continue to use it because of its low cost. If their night riding is confined to a dozen hours or so throughout the winter they can hardly be blamed for hesitating to pay from £15 to £20 extra for the luxury and convenience of electric lighting. It's an excellent idea, however, to utilise battery lighting for the sidecar and tail lamps. Combined gas and electric lamps can be bought for 12s. 6d. or so complete with a 4-volt battery. An acetylene head lamp alone is an easy thing to manage, but when a single generator feeds the head and tail lamps and another the sidecar lamp almost invariably trouble ensues before the three lights are burning brightly. If the battery idea makes no appeal, the substitution of brass for rubber tubing throughout the installation will save a deal of exasperation.

THERE is a bite in the air, and there is a real tang of autumn in the sweet smell of sodden leaves. It is a glorious period of the year for sidecarring—if one can escape on the right day; a windless day when smoke ascends in thin, straight columns from village cottages that are veiled in the grey haze of autumn. There are no days quite like those of a bright October, and I join with the week-enders in the fervid hope for brilliant week-ends during the next month. If only to spite those who have laid by their machines, refusing to pay 30s. tax for the last quarter of the year, do I trust for a brilliant finish to 1922.

"PENNY plain and twopence coloured" forms part of the policy of several light car manufacturers. By this I refer to the practice of offering unpainted aluminium bodies with an option of a range of colours at an extra charge. Most sidecars are not made of aluminium, but that is no reason why manufacturers should not give us a larger selection of colours. It is not to be expected that our tastes coincide with those of the people responsible for the lack of variety. While on this topic, why don't motor cycle makers give us the option of having the tank of a colour we fancy? After all, it is the tank that gives the finishing touch to a machine. A friend rather fancied a Royal Enfield, but green is his pet aversion—and was responsible for him deciding on another machine. Several sidecar makers at the last show were offering to paint their wares in public school colours to order. I am not suggesting that tanks should be decorated in fancy colours, but surely makers should offer black tanks when their "standard" is bright green, red, blue, or purple.

TOURING IN SWITZERLAND.

Nowhere in Great Britain are hills to be found which test the cooling capacity of an engine like the long and finely-engineered roads of Switzerland. Those who have never driven up their tiring gradients, often miles in length, can have but little idea of the severity of the test. The illustration depicts a water-cooled Morgan in the Montier Gorge; the driver is M. Jules Neher, so well known as the President of the Swiss Motor Cycle Union.

IDEAS: USEFUL AND INGENIOUS.

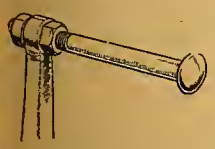
A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

Taking Petrol from a Tank.

WHEN no drain tap is fitted, take off the horn bulb, squeeze it up as much as possible, insert the neck in the tank, under the petrol surface of course, and release the bulb; it will fill by atmospheric pressure, and the transfer to another tank is an easy matter; the operation is like filling a fountain pen on a larger scale; on replacing the bulb in its proper place a surprising improvement in the tone of the horn will be noticed, presumably due to the remains of the petrol cleaning the reed. F.A.S.

Cheap Kick-starter Pedal.

ON the gear box of a Birmingham reader ("H.A.") the kick-starter pedal was one of those separately screwed into the crank, and it gave trouble by frequently coming unscrewed. After making good one or two losses by standard replacements, "H.A." purchased a 4in. × ½in. coach bolt from the ironmongers, and with a couple of nuts

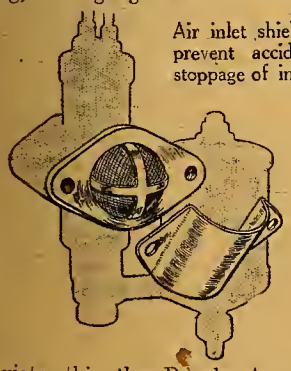


A coach bolt as a kick-starter pedal.

and a spring washer fixed it through the crank, where it has done long and efficient service. An improvement is to file down the sharp edge of the bolt head, or, better still, to fix over the unthreaded portion a piece of rubber hose-pipe.

Preventing Carburation Disturbance.

ON many two-strokes and most flat-twins the sideways projecting carburetter is often disturbed in its functions by the rider's leg, or part of his clothing, coming against the air intake.



Air inlet shield to prevent accidental stoppage of intake.

To obviate this the Douglas-Amac carburetter has a small cage over the intake gauge, but "G.M.," of Eythorne, has found a small U-shaped piece of sheet copper (fixed by the carburetter holding bolts) still more satisfactory; the illustration thereof shows the construction.

Timing for Speed.

AS a basis for experiment the following are suitable valve settings for various engines:

(i.) Inlet opens t.d.c., closes 44° after b.d.c., exhaust opens 53° before b.d.c., closes 20° after t.d.c.

(ii.) Inlet opens t.d.c., closes 60° after b.d.c., exhaust opens 60° before b.d.c., closes 17° after t.d.c.

(iii.) Inlet opens 3° before t.d.c., closes 45° after b.d.c., exhaust opens 73° before b.d.c., closes 27° after t.d.c. (for overhead valves).

D.J.H.

Aligning Chains.

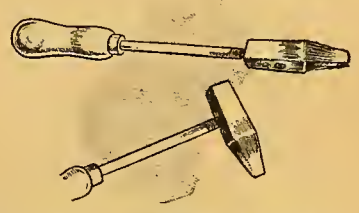
CHAIN alignment is vital, and is less easily verified in respect of the rear wheel than many people imagine. For perfect alignment, *e.g.*, in a speed event, the chain should be removed after final adjustment, and a long straightedge applied to both sprockets, making sure that it lies flush against the four peripheries which it crosses; for touring work it is enough to measure the distance between the rear tyre and the chain stays on both sides, which in the absence of a proper tool is easily done with a wooden slider on a stick, after the fashion of the shoe-fitter's foot measurer. See that brakes and gear controls are correct when the job is finished.

Lightening Reciprocating Parts.

IF the connecting rod of an engine being tuned for speed is of strong H-section the web may be drilled to reduce the weight. The type of piston required for speed work largely depends on the design of the engine; on most sports models the aluminium slipper type has proved a great success, but on mounts intended for side-car work the original cast iron or a light steel piston will probably give the best results. As it is essential that the reciprocating parts of a high-speed engine should be as light as possible, the piston skirt should be drilled profusely, and only one ring need be retained. J.H.D.

Useful Soldering Iron.

ALTHOUGH made some years ago, a soldering iron used by "C.E.J.," of Nottingham, is well worthy of mention. The copper bit is tapped with similar threads both axially and radially,



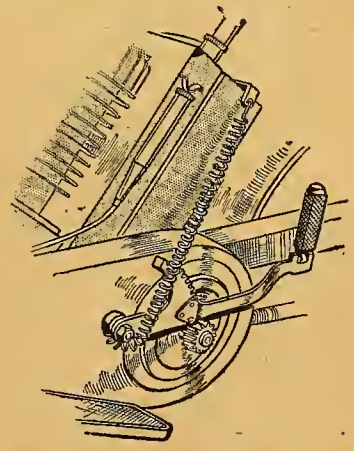
An idea which facilitates the soldering of small work.

so that it can be used straight or as a hatchet bit. The latter method of application is often advantageous when dealing with small work which is difficult to handle and elusive to hold.

For Old Indian Kick-starters.

HERE is another tip relating to the Indian machine sent by a reader in Holland (L. C. V.), who has previously contributed to these columns.

In this case the subject is the 1915-19 near-side kick-starter. Should the pedal return spring weaken or break, the idea is to obtain a long coil spring (in the instance mentioned the spring out of an

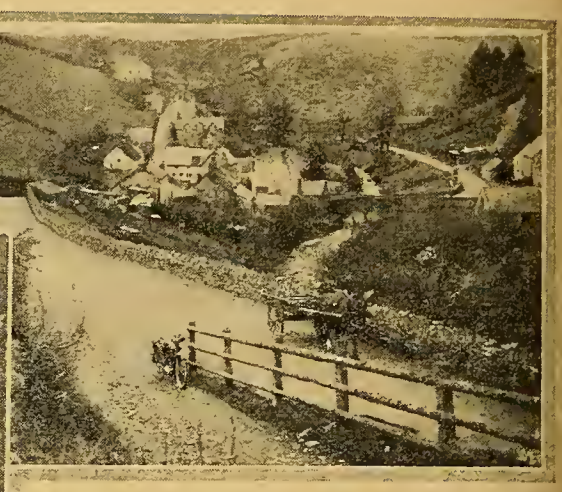


A cheap return spring for an Indian kick-starter pedal.

old candle bicycle lamp was used), and hook one end into the spring anchorage on the pedal. The other end is brought up to the top of the tool box on the saddle tube, where it is fastened by a strap iron hook or clip. As L. C. V. writes, "the whole is cheaper than one of your Virginian cigarettes."

The Sports Model as a Hack Machine

London-Land's End competitors who scaled Beggar's Roost last Easter may be surprised to hear that within two miles of the top of the hill they might have had to encounter lanes like this had not the route been altered.



The hamlet of Barbrook Mill showing in the foreground the commencement of Beggar's Roost; the farm cart is taking the avoiding road.

A 350 c.c. Lightweight and its Service in the hands of a Club Official.

By "WESTERNER."

RIDDEN in all weathers, a machine which loses its tune fairly quickly is likely to be a great hindrance to one who has but little spare time.

I expect a motor cycle in these days to be as ever-ready and reliable, as little in need of tinkering, as the pedal cycle. After all, that is just the need of the majority of motor cyclists, so my experience may serve as a very fair guide to those in a like position.

My previous mount was a docile flat twin, very satisfactory and reliable, but not over active in speed, so I was prepared to find my new machine, a Francis-Barnett 346 c.c. Jap-engined sports model, jumping out of my hands, so to speak.

The first 1,000 Miles.

Town riding has formed a fair proportion of my work, and at first I found the carburation a little erratic at low speeds in traffic, due probably to my lack of experience with the B. & B. carburetter; also, like all high-compression engines, this one was very susceptible to the ignition control lever.

The first real test came on attempting to follow part of the struggles of the riders in that now famous "Arctic" trial of the Western Centre on April 1st last; the snow-bound conditions are now history, but that single day produced more miles of slogging in low gear than might fall to one's lot in a twelvemonth.

In North Devon.

Ten days later I set out for Lynmouth, partly for business calls and also to see the "London-Land's End" competitors on Lynton and Beggar's Roost. I was informed at the "Ship" that I shouldn't get to Lynmouth on account of the snow, but I felt it might be worth trying, so pushed on.

This little 'bus had never seen Porlock Hill before; possibly it may have been the first F.B. to climb that hill. It did climb, and no mistake. I know the hill well, having ridden it many times on many machines, but had never attempted it on a lightweight.

Ploughing Through Snow.

A mile beyond the signpost the snow was reached, and following the hard, narrow ruts, which varied from 6in. to 12in. in depth, was no easy task. It was a low-gear grind, of course, and necessitated many stops. The deepest part came somewhere near County Gate, and there was no other course but to let the machine plough its way very slowly yard by yard, whilst I straddled over it or floundered by its side. The wide front guard and the footrests acted like scoops, forcing the lumps of snow up in heaps even on to my knees until at the end of this section the machine looked like a snowball on wheels. This was almost immediately washed off in a fair-sized lake which had formed from the melting snow, and stretched the full width of the road for fifty yards or so.

This sort of thing had the constant accompaniment of half a gale of wind and occasional sleet storms; it was not exactly enjoyable motor cycling, consequently the long descent of Countisbury, in spite of the rough surface, came as a welcome relief.

Lynton and Beggar's Roost.

Next morning, not having been touched, the machine looked as though it had been at the bottom of a river all night (mud, not rust, for it is singularly free from rusting propensities), yet the engine started first kick,

The Sports Model as a Hack Machine.—

and, without any attention, Lynton Hill was climbed quite comfortably, as also was Beggar's Roost.

An attempt to continue the route to Simonsbath proved hopeless; the moor was still snow-bound, and at one point the drifts were level with the hedge tops. Lynton Hill was climbed again next morning, and, after watching the "fun" on Beggar's Roost, the return trip to Countisbury was made.

This journey made up some 350 miles, the petrol consumption being approximately 92 m.p.g.; less than half a tankful of oil was used. No adjustments were made, nor was there any material damage done to tyres or any part of the machine.

Speed and a Strenuous Trial.

From Easter onwards there have been numbers of long-day business runs when speed was desirable, and it has been proved beyond doubt that over journeys of about 100 miles an average speed of 30 m.p.h. could be maintained if desired.

Perhaps the best day's work with the machine was a successful performance as a member of a club team in an inter-team trial—over a more or less freak course of eighty miles, including five hills, each taken twice, three of which involved the fitting of straps on the rear wheel to counteract wheel spin. Although it had the smallest engine in the trial, it completed the course without loss of marks, and with two out of a possible four bonus marks for clean ascents.

On Dartmoor.

The 4,000 mile mark was reached during a few days' touring from Torquay as a centre; each day was spent on the Moor or its fringe, and main roads were avoided as much as possible.

With close on 5,000 miles scored in a little over six months, I have still to experience trouble worthy of the name; this machine has brought me no end of good running, with speed enough for all my needs, and reliability without question. Moreover, I am surprised at the increase of comfort, or, in other words, the absence of weariness after long rides, as compared with my mounts of previous years.

INSURANCE PROBLEMS.

A Feature in which Insurance Questions are Answered and Discussed.

Insuring a Nondescript Machine.

C. Swindham, Caterham, writes: "I am building a motor cycle from various parts of two old machines. The engine is a twin of unknown make, about '5 h.p.,' and many years old. I should think the value would not be more than £25, as the market is to-day. What kind of policy would you advise me to take out? Obviously if I fill up the usual form as sent out by the majority of companies I shall be paying too much."

The insurance companies will not usually issue comprehensive policies in respect of motor cycles other than those of standard make, but you will, no doubt, be able to obtain a policy to cover third party claims, and this is the cover we should advise you to take.

* * * *

On a Strange Machine.

A reader interested in a case of questioned liability says: "A friend of mine, whilst out with his new sports single was asked by another motor cycling friend who came up on a sidecar outfit whether he would mind him trying his machine. This was reluctantly acceded to. Unfortunately, on coming round a sharp bend, the sidecar owner collided with another motor cyclist. This proved fatal to the latter rider. Is the owner of the sidecar mount liable to the solo owner? They were both insured. If the owner of the sidecar outfit is liable, is not the insurance company entitled to cover him against any claim for damage to the cycle he was riding? Is not the owner of the sidecar machine liable in case an action was taken by the parents for death of their son? Is insurance company liable in this case? Another insurance company repaired cycle belonging to rider who was killed."

In this case, the owner of the sidecar outfit would not be liable to the owner of the solo machine for damage to the machine, unless the solo owner can prove that there was gross negligence on the part of the person riding his machine. The question of insurance will depend upon the terms of the various policies held. If, for instance, the solo owner has taken out the ordinary policy, this does not insure the machine against damage whilst being ridden by some other person, unless a special additional premium is paid for this. The sidecar owner's policy, if taken out with one of the principal offices, will indemnify him in respect of third party claims whilst riding machines other than his own, but this would not cover him in respect of damage to his friend's mount, should he be found legally liable for the repairs. Any action taken on behalf of the fatally injured cyclist would be against the person who was riding the solo machine, namely, the owner of the sidecar outfit, and his policy should, as above stated, indemnify him in respect of such third party claims.

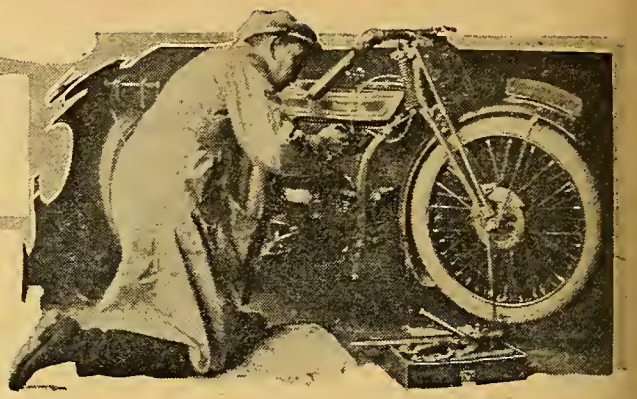
* * * *

Selecting Sound Companies.

Mr. A. Farnell, Leyton, E.10, says: "In April last I insured my motor cycle with a company for £50, receiving a policy dated May 5th on May 6th. On September 17th last I knocked a woman down, doing damage to my cycle to the extent of 25s. Everybody who saw the accident agreed it was not my fault. I sent in a claim and received a reply from another company telling me they had taken over policy holders of my company which had gone into voluntary liquidation on May 13th 'on certain conditions.' Of course they refused to entertain my claim, telling me they were very sorry and could not understand why I had not been informed before of liquidation. I shall be pleased if you would inform me whether it is worth while to put this matter into a solicitor's hands, as I am now in a position of being uninsured, and it would appear they have been grossly unfair to me."

In a case of this description your only right would be against the company that issued the policy, and as that company is in liquidation, it is not likely to be worth your while to trouble further in the matter. No doubt all the policy holders were circularised stating the terms upon which the other company would take over the policies, and it is certainly very unfortunate that either your name was missed, or the circular miscarried.

PREPARING for the WINTER



Attention to the Machine and its Equipment. Importance of Suitable Weatherproof Clothing.

By "ROAD RIDER."

THE approach of winter sets the tough type of rider thinking in two directions. First and foremost, he desires to reduce "trouble" to the absolute minimum, whether in his garage (steel tools do not feel nice in cold hands), or on the road (the always annoying stoppage becomes a positive tragedy on a dark, snowy night). Secondly, he will be wise to take precautions against personal discomfort due to driving under unpleasant conditions.

Of all winter roadside trouble, tyre stops are the worst. The tyres fitted at this moment to most machines have undergone a hard summer's wear, and are rather the worse for it. Covers may be thin or cut; non-skid corrugations may have worn down towards the flat stage; and tubes are disfigured by a number of patches, some of which leak. It is quite feasible to guarantee a tyre non-stop throughout the six winter months; and opulent riders will not regret the necessary outlay. Over-tyring—such as 3in. covers on a 500 c.c. machine—is an almost infallible insurance. Short of this, the cover allotted for use at this date must have a sound casing, free from cuts; thick rubber on the tread; and the heaviest obtainable scolloping as a preventive of side slip. The tube is preferably new and unpatched; some riders insert Jackson's Impervo, or swear by Challenger tubes. New valve rubbers may be fitted; the tyre repair kit overhauled, and any summer depletions made good; and the inflator connection is quite possibly wearing out.

Preparation of the Transmission.

When the tyres have been vetted O.K., the transmission should come in for attention. Naked chains should unquestionably be removed, thoroughly cleansed in paraffin, and re-lubricated in a *hot* bath. Whatever lubricant is applied, it will certainly not enter the fine clearances of the rollers until heat has thinned it down to the consistency of water; if it will penetrate cold, it is too light to keep out wet. Cold lubrication of chains is a sorry makeshift. Adjustment must be looked to; and if the chain has reached the stage at which a roller or two are missing, the time has come for a new chain. A test of the new chain will possibly indicate that new sprockets are advisable as well—it is folly to run a brand new chain over teeth which have worn away their virgin accuracy. An old chain should be set so that it is not too tight at its tightest point.

Thorough lubrication of the entire machine is the next stage, not forgetting such small bearings as those on the brakes; nor such inaccessible bearings as the steering head or the hubs. It is specially important that the hubs should be packed full of grease to keep out water; and Price's speciality runs in quickly when thinned by heat.

Wet Resisting Engine Details.

A trustworthy engine needs no special attention beyond decarbonisation when due. But it is well to commence the winter with the engine clean, and with gastight rings and valves. There will be plenty of low gear work and slow-speed work, both of which imply heating up towards the maximum working temperature; and hills will be far harder to climb when the wheels have to cut through inches of mud. So everything should be efficient. Drain the oil tank and crank case, replenishing with a lighter grade of oil.

The carburetter may be cleansed, and its control wires greased where they emerge from their casings; frayed wires should be renewed. If the magneto is not waterproofed, this should be done at once. To my thinking, there is no protection to beat a thick coating of vaseline, as it does not obstruct access; it is especially needed around the contact breaker, otherwise "fixed ignition" will occur on the first really filthy day. At the same time the platinum points may be adjusted, and if necessary cleaned.

All controls should be greased. Bowden wires may have hot Price's hub lubricant squirted down their casings. Pedals and levers, working on spindles, should have their bearings or eyes lubricated with a graphite grease—this will last through the winter.

Leg-shields and Handle-bar Muffs.

Finally, the question of legshields and handle-bar muffs should be considered. Both are more or less unsightly; but beyond all question they minister enormously to winter comfort. I never know which is the cosiest. When the front wheel swishes waves of icy surface water off a soused road against legs reposing on a pair of plain footrests, I feel that £10 would not be too much to pay for legshields. When an east wind plus a thermometer dropping towards zero make thick hide gloves feel like nun's veiling, I would swop all my gold medals for a pair of muffs. I rather fancy that the Easting solo screen will be "much worn this season," as the modistes say.

Preparing for the Winter.—

A lot of nightriding is inevitable from November to March. Fit a dynamo set if you can afford it. Otherwise, insist on a dry battery tail lamp set, overhaul the head lamp carefully, and if it is a gas type, mount a reserve carbide container on the machine. Carbide tins are not good for pockets, and carry a box of wind vestas; mine live inside the head lamp, camouflaged by a lump of waste.

Clothing—A Vexed Question.

No two winter riders agree about clothing. One school of thought believes in piling on as much clothing as possible, topping off with heavy waterproofs. This system does not make for comfort on long rides. Moisture is continuously evaporated from the human body, and if it cannot get out of the clothes, it stays in. The man who pads himself out to the dimensions of a grizzly bear will sweat his underclothing damp even if he refrains from exertion after he is dressed for the road. In a few miles the damp underclothing will chill him. If a rider so attired starts his ride with a minute or two of heavy exertion—kick-starting a sulky engine, pushing the machine out of a stable, pulling carrier straps tight, etc., he will be cold in five miles. Of course, if the trip ahead is brief, he will reach his destination before he feels frozen, especially if he avoids exertion after dressing up, and if he does not naturally perspire very much. But on a really long run or for a rider who perspires freely, the golden rules are:

1. Wear lots of thoroughly ventilated clothing.
2. Shun even mild physical exertion when once dressed (*e.g.*, start engine before donning overalls; strip off some clothing before roadside repairs, etc.).

Of course, if the day be wet or snowy, there is no help for it. You have to choose between getting wet from outside by the weather, or getting damp from inside the clothing by condensed evaporation. The weather being the greater evil, one dons drencher-proofs. The two vital points about storm overalls are:

1. They must keep water out (few do, except oilies).
2. They must let out the body steam, *i.e.*, be thoroughly ventilated.

The second merit is even rarer than the first. Two or three eyelets at the fork and under the armpits are usually the sole provision. A loose fit helps to some extent, for which reason it is a bad thing to pull the belt tight. These eyelet holes are often blanketed on the inside by an almost impervious coat and breeches.

No perfect winter glove exists. Lined fur, worn inside handle-bar muffs, is the best compromise. During stoppages in rain, remember to shove the gloves inside the breast of the jacket, when they may keep dry. Some cheap furs set board hard after a wetting; a few comparatively expensive furs are all but waterproof.

For the short ride to which many owners limit themselves in winter, such a get-up as snow or gum boots, a Sidcot suit, and a helmet with ear flaps is satisfactory. A pair of goloshes or snowshoes will render any old boot watertight, and they are more easily removed than waders or trench boots.

The best headwear is a helmet with ear rolls and flaps, and a neck valance. Seafaring men sometimes wear a sort of oilskin candle extinguisher with a face-hole in front. If the face-hole fits your face, and not somebody else's, these are excellent.

The leggings must not be of the pull-over type, for your boots will rapidly foul the inside of the legs. The market now offers plenty of leggings which collapse in a heap round your ankles after a few tweaks at the fastenings.

Four trials riders all of whom have different ideas of what constitutes the ideal winter riding-garb.

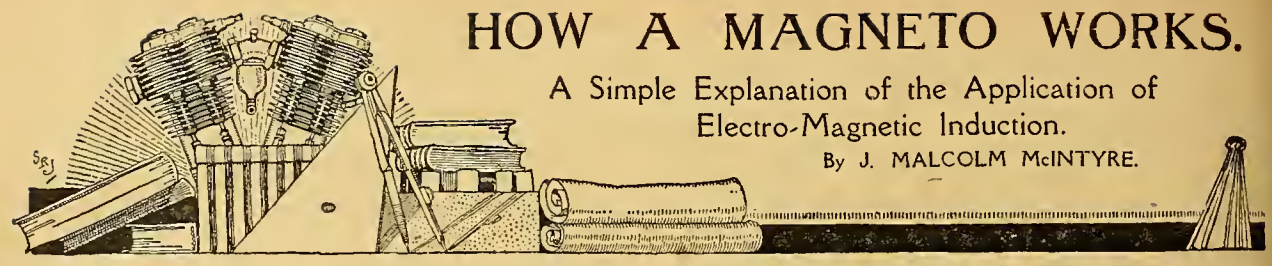
HIGHER MATHEMATICS.

A CORRESPONDENT forwards two silly season posers:—

(1) Do the spokes at the top of a motor cycle wheel travel faster than those at the bottom as observed by a person standing on the road?

(2) How would they appear to the rider of the machine if it were possible for him to see them?

Vast wagers hinge on the matter, which I present to the public for decision. But the second question completely metagrobolises what was previously my pet hypothesis, viz., What would Queen Elizabeth have done with/to Lloyd George? IXION.



HOW A MAGNETO WORKS.

A Simple Explanation of the Application of Electro-Magnetic Induction.

By J. MALCOLM McINTYRE.

TO go fully into the theory of the magneto in an article of this nature is obviously impossible, not to say undesirable; but the following notes should enable the average motor cyclist to get a grasp of the principles underlying the working of this small but essential part of his machine.

The working of the magneto depends entirely upon two simple electrical laws, or, to be more precise, two special examples of the application of one general law —that of electro-magnetic induction; and these two laws may be explained with the aid of a couple of simple diagrams.

For the first, then; in fig. 1 let A represent a bar of soft iron, around which are wound two coils of insulated wire, P and S. The ends of P are connected up as shown to a battery (B) and a switch (X), and the coil S to a galvanometer or other detector (G). It is found that so long as the current flowing through the coil P from the battery is steady, or is not flowing at all, no movement of the galvanometer needle is seen, but every time the switch is turned either on or off the needle of the detector is momentarily deflected, showing that a current is set up in the coil S. In other words, the coil S has a current "induced" in it whenever the current in P is varied—*i.e.*, increased or decreased.

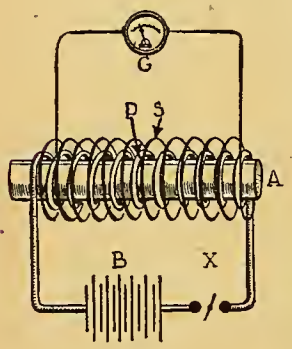


Fig. 1.

Production of Current.

It is also found that (i.) the more sudden the making or breaking of the circuit P, the stronger is the current in S, although it does not endure so long; (ii.) the induced current is always stronger at "break" than at "make"—that is, stronger when the switch is turned *off*; and (iii.) the voltage of the secondary current is to the voltage of the primary current as the number of turns of wire in the secondary is to the number of turns of wire in the primary. In other words, if our primary has twenty turns of wire and the battery gives four volts, and our secondary has two thousand turns of wire, the induced current will be at four hundred volts, but it will gain this at the expense of its intensity, the ampèrage of the secondary being only one one-hundredth of that of the primary. (Such would be the case in a coil of 100% efficiency, which cannot be obtained in practice; actually a certain percentage is always lost.)

In fig. 2 let N S represent the poles of a horseshoe magnet and C a loop of wire which can be rotated on the axis A B between the poles N S. The ends of the loop C are taken to two insulated slip rings S S, from which two leads are taken to our galvanometer G. If, now, the loop of wire is rotated by some mechanical means it will be found that a momentary current is induced in C twice in each complete revolution and that this current is at its maximum intensity when the loop is in the position shown in fig. 2, when the sides (*a b*) of the loop are cutting the imaginary lines of magnetic force between N and S (represented by the dotted lines), while the induced current is at its minimum (or zero) value when the loop has moved through 90° from the position indicated.

The current produced in the loop C is naturally a very small one, but its strength may be greatly increased by substituting a coil of a number of turns of insulated wire for the single loop, and by winding this coil on an "armature," as it is called, of soft iron, to concentrate the lines of magnetic force from the magnet N S through the wire coil, since the intensity of the current produced is proportional to the number of lines of force cut by each turn of wire.

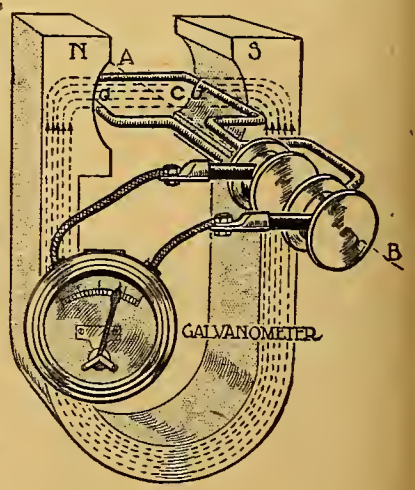

Fig. 2.

Practical Needs.

Let us now turn to the construction of the magneto —we will consider the simplest type, *i.e.*, one for a single-cylinder engine. In order to serve our purpose it has to supply a momentary current at a definite instant once in each cycle of operations of the engine, and this current must be of a voltage high enough to enable it to jump a spark gap of at least one millimetre, for which several thousands of volts are required.

The magneto may be divided for our purpose into four constituents: the field magnet, the armature, the contact breaker, and the condenser. The first-mentioned is simply a steel "horseshoe" magnet—or, in some cases, two such magnets placed together to

How a Magneto Works.—

form virtually one—of which the pole pieces N S are shown in fig. 3. The armature resembles a capital letter H in section, and it is built up of thin iron stampings, mounted on the armature shaft and compressed, usually hydraulically, until they form as nearly as possible a solid mass. On this iron armature are wound two entirely separate coils of insulated wire, of which the primary consists of a few turns of fairly stout wire, and the secondary of a great number of turns of very fine wire. One end of each coil is "earthed"; that is to say, connected to the iron core of the armature, and therefore—electrically—to the rest of the frame. The other end of the primary coil is connected up direct to the contact breaker. as shown in fig. 3.

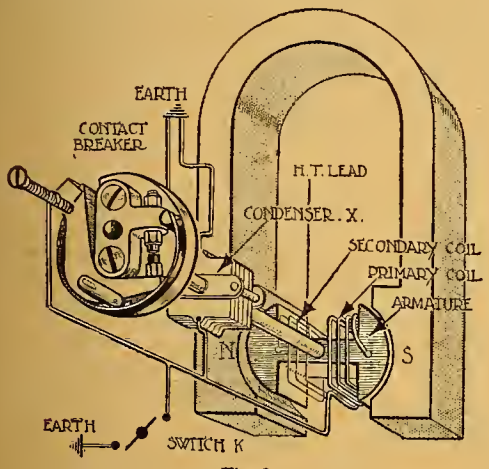

Fig. 3.

The construction of the contact breaker need not be gone into here; it is accessible by removing the contact breaker cover of a magneto, and its *modus operandi* is easily grasped if it is carefully examined; suffice to say that the platinum points are brought together and suddenly separated again once per revolution of the magneto (on a single-cylinder magneto) and that one of the points is connected to the end of the primary coil, and the other "earthed," *i.e.*, connected to the frame of the machine.

Producing the Spark.

Let us suppose that the contact breaker is not working for the moment—that its points are permanently in contact—and that the magneto is rotated. According to the principle of fig. 2, a current will be induced in the primary coil passing through the contact breaker and returning through the frame; this current, of course, rises to maximum and sinks to zero again twice per revolution, inducing a corresponding rising and falling voltage in the secondary.

But if our contact breaker *is* working, and is arranged to break the primary circuit suddenly at one of its maximum points, in accordance with our principle of fig. 1, we get an instantaneous and much more powerful "rush" of current in the secondary, the voltage of which is very great—owing to the large number of turns of wire in the secondary—and quite sufficient to give us our spark. Hence, if the free secondary lead is connected to an insulated slip ring on the armature shaft, on which impinges a collecting "brush" (of carbon) connected, *via* the H.T. lead, to the central electrode of the plug, our ignition system is apparently complete, a spark taking place at the plug once in every revolution of the magneto at the exact moment that the contact breaker points separate, the magneto being driven at half engine speed, to give a spark on each compression stroke when used on a four-stroke unit.

The Condenser.

But there is another point to consider; when the current in the primary coil is suddenly interrupted, it not only induces a powerful current in the secondary, but also tends to induce a "follow-on" current in the coils of the *primary* winding *itself*—every turn of wire in the primary coil acting inductively on every other turn, and this current, if neglected, will cause destructive sparking at the points of the contact breaker, and also mar the suddenness of the break in the primary, so essential to an efficient high tension "pulse" in the secondary.

The introduction of the condenser eliminates this trouble. Briefly, it is constructed of a large number of alternate sheets of mica (or paraffin waxed paper) and metal foil, alternate sheets of the metal being connected up to two leads as shown in fig. 3.

Preventing Contact-Breaker Sparking.

The theory of the condenser's action cannot be given here; suffice to say that, when connected up to the primary circuit as shown in fig. 3, it effectually chokes this self-induced "follow-on" current, rendering the breaking of the primary circuit instantaneous, and preventing destructive sparking.

In fig. 3 a cut-out switch as sometimes fitted is represented; this operates by permanently closing the primary circuit, so rendering the breaking of the circuit at the contact breaker ineffective.

Since the spark at the plug obviously takes place when the platinum points separate, rotating the cam ring so as to cause the fibre block of the contact breaker to strike the cams sooner or later will vary the timing; in this way advance and retard are obtained. The range of action, however, is limited by the fact that to get a hot spark the primary circuit must be interrupted at its maximum point, or very near it.

Twin-Cylinder Magnetos.

It has been seen from fig. 2 that the current generated in the primary attains its maximum value twice per revolution; hence if we arrange our contact breaker to operate twice instead of once, we can get two sparks per revolution, and if we arrange our slip ring suitably with two collecting brushes, we have all that is required for a twin-cylinder engine. But in a V-twin the firing intervals are uneven, so that if we arrange for one cylinder to fire when the armature is in the maximum position, the other will have to fire either before or after this maximum position is reached, resulting in a weak spark. Actually a compromise is effected, one firing slightly before and the other slightly after maximum position.

MID-WEEK SPEED TRIALS AT BETCHWORTH.

Flat-Twin beats o.h.v. Single at Reigate, Redhill and District M.C.C. Meeting.

E. W. Spencer (494 Douglas) crossing the finishing line after making fastest time of the day.

CHALKED across the Reigate-Dorking road on Wednesday of last week was an announcement in large white letters to the effect that speed trials were being held at Betchworth Park by the Reigate, Redhill and District M.C.C.

But apart from that little touch of originality the event proved to be very ordinary and very little different from any other meeting at any other time. However, there was plenty of enthusiasm, efficient though simple organisation, and some keenly contested duels for honours.

Measuring exactly a quarter of a mile, the course was a private road (used by permission of Lord Francis Hope) running through Betchworth Park golf course. Whether the golfers welcomed the intruders is a moot point; the sudden crackle of a well-tuned engine, disturbing despite compulsory silencers, was not calculated to improve a six foot putt on the 18th green

On the whole the riding was quite good. E. W. Spencer (493 Douglas) carried all before him in the larger solo classes, including (metaphorically) R. A. Green's o.h.v. Norton. Green, in turn, was usually a little faster than anybody else, although C. Volk on another Douglas beat him once. Sheraton's Sheffield-Henderson, which won the two 350 c.c. events by an easy margin, might have been heard more of in the later classes had it not been scratched. E. C. Gordon (499 Triumph) also rode most consistently.

The sidecar classes were not well supported, and probably the most creditable show, not excepting the placed men, was made by A. G. Harris (976 De Luxe-Jap sc.)—a one-armed rider on a home-built machine.

Otherwise the results sheets automatically give prominence to the right men.

Fastest sidecar time being made by E. Headlam (976 Zenith sidecar)

The Autocar

AND THE SHOW.

November 3rd to 11th is the date of the annual Automobile Exhibition at Olympia and The White City.

In connection therewith "THE AUTOCAR" will publish Four Special issues as under:

Oct. 20th. Accessories and Tyres.
„ 27th. Buyers' Guide of 1923 Models
Nov. 3rd. Show Forecast and Guide.
„ 10th. Complete Show Report.

Published in attractive coloured covers, these enlarged issues will be worthy of "The Autocar"—the representative British Motoring journal. To avoid disappointment copies should be ordered in advance!

EVERY FRIDAY. FOURPENCE.

OVER 300 EXHIBITORS TO BE AT OLYMPIA.

List of the Principal Exhibits of Motor Cycles, Runabouts and Sidecars which will be Staged at the Motor Cycle Show next Month.

MOTOR CYCLES AND RUNABOUTS.

"THE MOTOR CYCLE" FILM.

Last Year's Popular Feature in Clubland to be Repeated during the Coming Winter.

ONE of the chief features of last winter's club activities was the cinema entertainment which was arranged by about 100 individual clubs in conjunction with *The Motor Cycle*. This thrilling "picture" included incidents in all the big events of the year, and the appreciation expressed by our readers has encouraged us to offer again a film for club entertainment.

Many spectators at the various important 1922 trials may have observed the cinematograph operators who have so often been present. The net result of their efforts is a film approximately 2,000 feet in length, which will not only interest enthusiastic motor cyclists, but will demonstrate the efficiency and hill-climbing abilities of the modern motor cycle to the non-motoring public.

Occupying from thirty to forty minutes to show, *The Motor Cycle* film includes incidents in:—

The Junior T.T. Race.
The Senior T.T. Race.
The Car T.T. Race.
The Motor Cycle Grand Prix in France.
The French Grand Prix for Cars.
An Extraordinary Hill-climb in America.
London-Land's End Trial (Beggar's Roost).
London-Edinburgh Run (Kirkstone Pass).
Junior Car Club's Run to Manchester.
Beach Racing.
Brooklands Events.
Etc., etc.

An even larger number of clubs will be able to organise their cinema nights this winter, and club secretaries should make early application for a date, as the film will be released for loan immediately after the Olympia Show. Many dates are already booked, as a number of clubs approached us for a date immediately they had held their entertainment last winter. In applying, several dates should be suggested. No charge is made for the loan of the film, and local cinema managers are usually only too eager to include it in their programme. Last year, so keen was one Irish club (the Cork and District M.C.C.) that a special messenger was sent over to London to fetch it, in order to ensure its safe arrival. In another case, a hard-working club official rode 200 miles to collect it from a town where the club thoughtlessly retained it for "one more night." One copy of the film twice crossed the Straits of Dover, and another has gone to South Africa to demonstrate the utility of present-day motor cycles, and so help overseas trade.

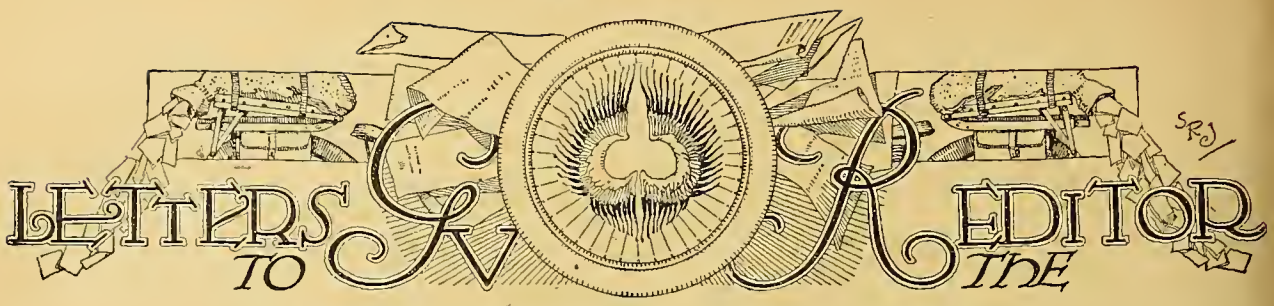
The main object of the film, of course, is to help clubs to provide entertainment for their members, and so retain their interest during the winter months.

All communications respecting the film should be sent to the Editor (Film Department), Dorset House, Tudor Street, London, E.C.4.

THE MOTOR CYCLE

SPECIAL SHOW NUMBERS.

Nov. 9th. Lightweights and Accessories.
Nov. 16th. Passenger Machines.
Nov. 23rd. Show Forecast and Guide.
Nov. 30th. Show Report.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

SILENCE.

Sir,—There are two matters which I think deserve the very serious consideration of motor cycle manufacturers, viz., riding position and silence. The great majority of motor cyclists use their machines for business or pleasure and do not want to ape the "scorcher" or "knut," but are in many cases compelled to do so owing to the position and style of handlebars, saddle and footrests provided. It does not add to a professional or business man's appearance to be doubled up in an unnatural position on a motor cycle. Machines should be provided with comfortable handlebars and footboards and capable of some adjustment so that the rider can assume a natural position.

Now as to silence. I cannot understand makers sending machines out for use without reducing the exhaust noise to the lowest possible. The general public are more up against motor cycling from this cause than anything else. There are one or two machines that are fairly quiet, but there is no reason why silencing should not be still much improved and with added efficiency to the engine.

I hope at the forthcoming show to find the makers are going to cater for the ordinary man a bit more and that the craze for sports models and noise will give place to comfortable and quiet machines, albeit with plenty of speed and power. T. GOLDSWORTHY-CRUMP.

Sir,—I am not a motorist, but I am a regular reader of your paper. A short while ago "Ixion" described how the village postmistress liked his new machine, simply because it made plenty of noise to warn her of his approach, allowing her to get the children in before he passed!

Seriously, I quite agree with her and think that noisy machines are the safest, by far. The "straight through" exhaust gives warning of its approach a reasonable time in advance. The horn does not. How on earth is a cyclist, or anyone else, to hear a motor cycle horn, if a Ford happens to be bouncing over pot-holes at the other side of a bend?

The "fish-tailed" exhaust is silent when the throttle is practically closed.

We see daily accounts of motor cyclists being fined for not having silencers, whether making a noise or not. I understood the police were the protectors of the people, not their rulers. I think it is time the public demanded that "fish-tailed" exhaust pipes be made sufficient in law.

Morpeth. NON-MOTORIST.

Sir,—I quite agree (as a rider of a motor cycle since 1899) with the police in their campaign against noisy motor cycles.

The majority of machines are much too noisy; in fact, in many respects the present-day motor cycle is not in advance of those of about 1904. It is often as noisy, as dirty—through want of proper mudguarding—and as hard to clean, as in those early days; in fact, as far as design goes the present motor cycle—with one or two exceptions—is in the same state to-day as cars were in 1903. The car in those days was a horse vehicle, minus shafts, and with an engine stuck on (at the wrong end, as it is to-day); the present-day motor cycle is merely a push cycle with a stronger and lower frame, and an engine, etc., stuck on.

Many machines are not properly silenced by the makers; many are made noisy by young people who think they are "knuts" (really nuisances); others, again, are noisy because some people have an idea that an efficient silencer slows the machine, which of course it does not.

About 1904 I had a Clement-Garrard motor bicycle (which incidentally was a four-stroke with outside flywheel, overhead inlet valve, and detachable head), rated at 2¼ h.p. I had a hole cut in the exhaust pipe about 2in. from the cylinder. When this hole was uncovered and the machine was exhausting practically into the open air, it would not climb a slight gradient, much less a hill. Close the cut-out, and it climbed well. So much for loss of power through an exhaust box.

Again, why are so many motor cyclists so dirty? Many have filthy hands, dirty faces, dirtier overalls, etc.—in fact, they are a disgrace to the sport. Such dirt is quite unnecessary. Is it another phase of the "knutty" rider? This type of rider, with his noisy machine and dirty appearance, does not encourage the non-rider. M. D.

Cosham.

Sir,—According to the warnings issued in your journal nearly every week, it seems that it is becoming quite a foolhardy practice to venture outside one's own premises on a motor cycle. Apparently, if you manage to negotiate one town in safety that fact is no guarantee that you will be so fortunate in another; in fact, most probably you will be stopped and summoned for driving a *noisy* machine, whether a silencer is fitted or not. Is it not high time something was done for us poor motor cyclists that we may be saved from this abominable persecution? If a motor cycle is really such a nuisance to others by reason of its noise, why not devise an efficient "silencer or other device" for all machines and make it compulsory? Or, if necessary, one for 250-350 c.c. machines, another for 500 c.c., and so on. If this were done by the authorities it would end this constant, irritable, abominable "sniping" by the police, at whose mercy we seem to be entirely. BOW-WOW.

Lincoln.

Sir,—Allow me to endorse the remarks of "One of the Audience" on noisy motor cycles. It is of little use to the general public to know that a cycle is fitted with all sorts of wonderful silencing devices if the machine in question makes a noise like a machine-gun—which a great many do.

I live about a quarter of a mile from a main road which has a considerable motor traffic in the summer, and, while motor cars will pass unnoticed all day, we are frequently disturbed by the motor cycle traffic. The average motor car is far more silent than the average motor cycle. I cannot see the force of "Objector's" remarks; they appear to me to apply to all motor vehicles, and although some cars are ultra-silent, people get out of their way just the same.

It is perhaps necessary to add that I ride a motor cycle.

Radnor. F. H. M. V.

Sir,—Why must the police persecute motor cyclists for making a noise, while lorries, steam waggons, electric trams, and even railway trains are allowed to create such a din that one cannot hear oneself speak?

After all, the exhaust of a motor cycle is not the only unpleasant noise that ever happens. I have been between two babies, both giving tongue continuously, in a non-corridor railway carriage for two hours. BIG SINGLE.

London, N.W.8.

BULK OF A FOUR-CYLINDER MACHINE.

Sir,—In the report of the M.C.C. one-day sporting trial you refer to the F.N. as lengthy and heavy. Whilst, of course, the machine is relatively lengthy and heavy, we think that a wrong interpretation might be placed on this remark, the reader thinking that it is *unduly* lengthy and heavy.

The weight, as a matter of fact, is only 300lb., which is less than some big single roadster machines.

The wheelbase is, we believe, no longer than several other makes of powerful machines. As a matter of fact, the general lines of the machine are apt to mislead. The long "in-line" engine and low centre of gravity make the machine look longer than it is, and the large crank case to accommodate the long stroke of the engine (88 mm.), and, of course, the addition of a sump for the oil, give the engine a bulky appearance, but as the crank case is merely an aluminium box, it is exceptionally light.

"F.N." (ENGLAND), LTD.

MORE DOPE.

Sir,—May I commend to your notice and that of all other motor cyclists the petrol intensifier known as Petrolex.

My present mount—a 90 mm. bore Zenith tuned for speed work, was a notorious petrol-eating demon, its average consumption being about 40 m.p.g. I was advised by the proprietor of the Quick Service Garage, Bedford, to try some of this "dope" in my 'bus. I did so! My petrol account almost immediately dropped while using it, and I am now doing in the neighbourhood of 70 m.p.g.

Upon making further inquiries the proprietor informed me that he could not say much about Petrolex as certain obstacles had to be overcome before it could be offered to the motoring community of this country.

Bedford. ECONOMIC.

BRITISH RACE TRACK POSSIBILITIES.

Sir,—At the race meet held at Syracuse, New York, on September 16th there was an attendance of 45,000 spectators. This is by no means an unusual "gate" at a well-managed motor cycle race meeting in America, and goes to show that if a track is properly constructed, with suitable grandstands so that spectators can see every bit of the racing (which they cannot do at Brooklands), there is bound to be a big attendance.

If in America, where more interest is taken in automobiles than motor cycles, they can muster huge crowds for motor cycle race meets, I can quite imagine that in this country, where interest in motor cycling is so keen, we would have "football" attendances if we had proper tracks and accommodation for spectators. W. H. WELLS.

SIDESLIP ON SPRING FRAME MACHINES.

Sir,—In reply to "XA5291," my present mount is a 349 c.c. Carfield-Blackburne spring frame model, fitted with a three-speed gear box, on which I have covered 11,500 miles by speedometer reading.

I have travelled over some of the worst roads in Scotland, as follows:—From the Midlands to Oban and back through the Pass of Glencoe. Most of this ride was done in very wet weather, but I did not find any tendency for the machine to skid. A. E. H.

Stafford.

Sir,—My machine is a Beardmore-Precision, and although I have only had one really severe crash, due to an emergency application of the brakes, there is an ever-present feeling when riding on grease that "something is going to happen."

Without claiming any special knowledge of the subject, the causes of skids and side-slips appear to me to be:—(1) Too rapid acceleration or deceleration; (2) distorted frames or slack hinge joints; (3) centre of gravity too high in the layout; (4) harsh drives or fierce engines; (5) nerves or "vertical breeze."

Manchester readers will be able to confirm the blood-curdling sensation of riding solo in the city streets amid grease, tramlines, and motor lorries.

A hundred hectic yards of our round-topped "sets" on a greasy day would cure "XA5291" for ever of any tendency to skid on mere tarmac.

My theory is that the springing allows the back wheel to bounce; if it hits the road squarely all is well, but if it strikes the side of a rounded "set," or the sloping side of a greasy pothole, the wheel sideslips.

What follows depends upon the tyres and the speed at which one is travelling; slow speeds seem to aggravate the trouble. A.M.I.E.E.

Manchester.

Sir,—My experiences, extending over ten years and many thousands of miles over all kinds of roads and riding conditions on a certain make of spring frame machine, may be of interest to your correspondent "XA5291," and possibly others.

My machines have always been ridden solo, and my present mount, which has done over 10,000, has never yet touched the ground except on its tyres, and I never had a skid on the others had enough to bring me off. I am quite sure that these machines are no more liable to skid than rigid frame ones, and, under certain conditions, less.

This is entirely due to their scientific though simple design, a design that does not copy car practice, which is quite unsuitable for a single track machine. This design provides for a vertical motion of the back wheel in the rear portion of the frame, but prevents any lateral movement whatever. It does not matter at what angle the machine is to the horizontal, the back wheel is always in perfect alignment.

There is no question of the rear portion of the machine tail-wagging or the wheel wobbling about at its own sweet will.

These conditions simply do not exist, and one feels as confident as when on a rigid frame.

One has only to ride a rigid frame machine with loose back wheel bearings to experience what riding some spring frames feels like. Is it to be wondered at that they will not steer properly?

Personally, I do not think tyres have any bearing on the matter. I have had three-rib on rear and studded on front and *vice versa*, and the only difference I have noticed is that the mud-slinging propensities of the one are greater

CURIOUS CARNIVAL CLOTHING. This owner of an Enfield outfit saw the humorous side of a wet summer. His outfit represents the "1922 Summer Tourist," in the recent Hull Motor Carnival held in aid of St. Dunstan's.

than the other. As regards stability, I do not think there is anything to choose between them.

With a spring frame machine it is quite possible to fit small-section heavy tyres and pump them board hard without any sacrifice of comfort, which means long life and economy in tyres.

I use 26×2in. tyres pumped board hard, and though my weight with luggage and samples is 15 stone, I find I can get 5,500 miles out of a 32s. tyre on the rear wheel.

Diss. DUMPLING.

THOUGHTLESS LADY MOTORISTS.

Sir,—I agree with "Elder Brother's" plea for motor cycles for our girls. Indeed, my wife has been seized with an ambition to possess a Scott-Squirrel, and when the funds run to it, we shall try to realise it.

But I must enter a protest against the very insufficient knowledge (to say the least) that some lady drivers possess of the unwritten rules and courtesy of the road. Yesterday, whilst passing four hunters in charge of two grooms, I slowed up to pass the animals with the least possible disturbing noise. At the same time, two cars travelling in the opposite direction and driven by ladies dashed past, hooting persistently. I was compelled to run on the grass bordering the road. Apparently the horses and their riders and I were not on the road.

A few weeks ago a motor cyclist lost his life in this district, apparently through a lady forgetting to give warning to other road users that she was turning a corner.

Leamington. "AN UNTURNING WORM."

DEPOSITS ON VALVE STEMS.

Sir,—The advice received by "Sidevalve" from one of Messrs. Wakefield's representatives at Olympia last year was quite sound, provided he was relating to a side-by-side valve Triumph used for touring, which apparently he was. Castrol "R" is not the most satisfactory oil for this particular engine, and as it is not good policy to recommend anything but the most suitable, it is our endeavour to persuade owners to use Castrol "X.L."

E. A. EVANS, Chemist,
C. C. Wakefield and Co., Ltd.

THE ETHICS OF "HANGING-ON."

Sir,—I strongly sympathise with "Benedict," who seems to have been indeed unfortunate in his experiences with hangers-on, but surely if he looks more closely into the reason for my letter he will realise that, intentionally or not, he is somewhat skilfully drawing the proverbial red herring across the argument.

The reason for my letter was not prompted by a desire to encourage any cyclist to thrust his nose down the neck of "Benedict's" wife, and, indeed, I would consider such conduct both indelicate and outrageous.

My interest in the conduct of "Norton Rider" is chiefly due to his somewhat "Hunnish" method of ridding himself of an annoyance at the expense of all users of our roads, and also, I fear, to the serious detriment of motor cyclists as a class.

As regards the cyclist, I have no objection myself to "followers," but I feel sure that their good sense and good manners would in most cases ensure their departure if they were politely requested so to do.

Should they fail to do this they would, I think, join that class of "persons" of whom "Norton Rider" is one.

A. C. GODFRY.

MISNAMED LIGHTWEIGHTS.

Sir,—What *is* a lightweight motor cycle? You say, "One should encourage the 150 c.c. engine." But it is absolutely no use encouraging a small engine unless the total weight of the machine is limited. Look at the last T.T. races. Could anything be more absurd than calling a motor cycle weighing 253 lb. a *lightweight*, simply because it had a small engine? There were many machines in the Lightweight T.T. that weighed many pounds *more* than the Junior and Senior machines! No! Keep the limit of a lightweight *under* 100 lb., all on, with a two-speed gear, and perhaps there will some day be developed the "motor cycle for the million." EDMUND CANBY.

TAPPET CLEARANCES AND NOISE.

Sir,—Now that the police are taking such a keen interest in the silencing of motor cycles, the following tip may be useful to your readers.

I find that the noise of the exhaust of my Norton is 100 per cent. louder when there is excessive clearance between the exhaust valve and tappet than when the clearance is reduced to a minimum.

I have noticed this phenomenon with two Nortons I have had, and can only account for it by the theory that with the adjustment as small as possible full advantage is taken of the slow lift arranged on the toe of the cam contour, whereas when the clearance is excessive the valve is opened more quickly, but slightly later, by the rocker striking the steeper portion of the cam and missing the slow beginning altogether.

Whether this tip is useful to other machines I cannot say, but it has only to be tried on a Norton to appreciate the difference it makes to the exhaust note. The exhaust crack entirely disappears.

Another point I noticed is that when running the engine slowly on the stand with a given throttle opening and a fair clearance between the exhaust valve and tappet, thus reducing the clearance by inserting a "feeler" to take up the play, the speed decreases. Why is this?

I have formed the idea that when the exhaust gases are released suddenly in a long pipe the inertia effect gives a better scavenging action. A. E. S.

[Other engines besides the Norton may be made more silent by reducing the exhaust tappet clearance, and probably "A. E. S.'s" reason for this is the correct one. On the other hand, it is difficult to explain a decrease in speed by inserting a "feeler" at the tappet unless this unintentionally gives a decompressor effect.—ED.]

APATHETIC CLUB MEN.

Sir,—At the risk of pitting my humble views against those of such a successful trials organiser as Mr. Alan Day, may I crave a little space to reply to that gentleman's recent letter?

In such a live club as that with which Mr. Day is connected, I quite agree that, in the event of a small entry for any competition, it is the latter itself which is at fault and that it must be made more attractive.

But I must repeat that it is my experience that in certain clubs the majority of members are so absolutely blasé, and utterly indifferent to what is done for them, that one may be excused for wondering why on earth they do not sell their machines and join an embroidery class! If one could guarantee these apathetic individuals that the start and finish would be at their own doors, the weather perfect, course about fifteen miles, freedom from punctures, a cup of tea *en route*, etc., then perhaps a few might be persuaded to clamber out of their bath chairs and struggle to the start!

Whilst Mr. Day's "probing mind" can soon discover a remedy for his own unsatisfactory entries, I am sure that he would have to probe for a very long while before he found anything that would suit the fastidious tastes of the members of some clubs I could name.

It is also pretty obvious that the majority of motor cyclists who sojourn in the environs of London all the week drift out into the "country" as a matter of course each week-end, and such as these—who form the greater percentage of the club which Mr. Day represents—would make no bones about a small ride of 20 miles to a venue. But it is a very different matter, strange to say, to get members whose club is actually in the country, to ride out even ten miles—particularly as they know they will have to ride back the same distance!

I was surprised to see that Mr. Day had chosen the cancellation of the S. Midland Centre Gymkhana as a suitable case to back up his argument. I believe I am correct in stating that less than twenty entries were received for that event, and if such was the case, then I contend that the organising committee did quite rightly in cancelling it. Surely one entry per club in the Centre was not enough to indicate that the event was wanted, and without doubt the course adopted was the wisest. "FED-UP."

Hertfordshire.

GETS YOU HOME.

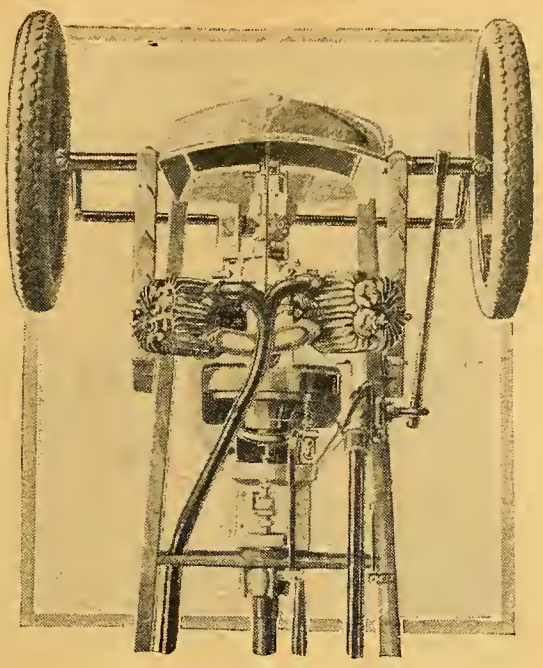
Sir,—With reference to the letter from Mr. A. Brascowe, Thorpe-on-the-Hill, published under "Insurance Problems," in one of your recent issues, in which he complains of the repudiation by an insurance company of his claim for towage, I would heartily recommend him and all fellow motor cyclists to join the Auto-Cycle Union, as a safeguard against such liabilities. The subscription is only £1 per annum, and this includes badge and "Get-you-home" forms.

The "Get-you-home" scheme is a very real benefit, as I can testify from personal experience. I had the misfortune to be "stuck" on a hill, a few weeks ago, through my brakes failing. The trouble was that new blocks fitted by a provincial garage were of such poor quality that they became useless after two applications. This was obviously not covered by any form of insurance. I had my wife and child, plus some kit, and we were over two miles from anywhere, with steep hills to negotiate.

As a member of the A.C.U. I filled up the necessary form and asked a passing motorist to be kind enough to hand it to the nearest R.A.C. repairer. Shortly after a car came out, took charge of the machine and party, ran us two miles to the garage, where the job was declared to be too long to be done at once. In consequence we went to the station (again in the car), and home by train.

The whole of this cost me nothing, the bill being met by the A.C.U. I consider that this affair alone was worth at least a year's subscription. ZENITH

London, S.W.11.



CYCLE CAR CHARACTERISTICS ABANDONED. For 1923 the air-cooled G.N. breaks new ground with a gear box and shaft and bevel driven axle. A new side-by-side valve engine will be fitted. A four-cylinder water-cooled model, two or four seater, will also be available. A full description appeared in last week's issue of *The Autocar*.

SHORT CUTS TO SPEED?

Sir,—Your article on "The Truth About Tuning" demands comment. Whilst admitting that the tips mentioned are useful in getting results from a machine, these results would not be comparable with those of a machine tuned by a man in possession of special knowledge, the existence of which your contributor seems inclined to deny.

He states that manufacturers send out the machines (sports models) with the best timing and compression for the job. And this job is very largely to be able to stand up to road work, to be reasonably tractable in the hands of some of the prize novices, who like any other person with the necessary cash, can ride a "sports" model. Were these people to sit on a really highly tuned machine they would not find it particularly tractable or comfortable for road work; consequently the average man cannot buy one.

The assertion that there are no short cuts to success may have a good general basis, but nevertheless there are quite a number of little-known tips of which racing men make use, and which are extremely effective. One occurs to me that is capable of sending up the speed (maximum for a burst and average) quite considerably, particularly where the machine is of more or less standard design. I remember increasing the maximum of a standard Rudge between 5 and 7 m.p.h., much to the mystification of the owner, who took the engine down three times to unravel the apparent mystery, but is now as wise as then. There is also another alteration to that particular machine which will put another 6 or 7 m.p.h. on top of that.

All such points as these are naturally the result of experience and experiment, and it is not likely that they will be distributed free, gratis and for nothing.

Finally, the hints given by your contributor alone would not give Dance hill-climbs or Pullin kilometres.

Bexley Heath. BEMSIST.

Sir,—I do not think the article, "The Truth about Tuning," is very informative. Most of the points mentioned by your contributor, *i.e.*, decarbonising, grinding in valves, etc., can hardly come under the heading of *tuning for speed;* it is simply an outline of the periodic proceeding carried out by all motorists or motor cyclists enthusiastic enough to keep their machines in decent running order.

The veriest novice knows that an engine runs better when it is clean internally. Incidentally, I do not agree that scores in a cylinder detract from the r.p.m. of an engine to any extent. I once owned a 1911 T.T. Triumph that had a very deep score in the cylinder wall, yet this antiquated wreck was timed over the half-mile at 63 m.p.h., and it also climbed Brockley Hill, near Edgware, at 48 m.p.h. (timed by stop watch and speedometer).

Bushey. RUMGO

AVERAGE SPEED OF SOLO MOUNTS.

Sir,—I think Mr. Williams' experience of fast solo mounts must be very small, if he really thinks that an average of 35 m.p.h. is extremely good. If he can only average 35 m.p.h. on his Scott, I should advise him to tune it up.

I ride myself a 650 c.c. Sports Zenith; the only thing in the way of tuning that has been done to it is that the pistons and connecting rods have been drilled. I do not consider my averages excessive or abnormally good, but any motor cycle which is meant for speed at all ought to be able to do likewise. The best of these in my opinion is Banstead to Cambridge, via Barnet, in 1 hour 52 minutes, 75 miles at an average of 40.7 m.p.h., including London; from Barnet to Cambridge, which is 48 miles, I averaged only a trifle under 50 m.p.h., doing the distance in 58 minutes; the times were taken by a watch carried in the outside pocket of my overcoat, and the mileage reckoned by a Bonniksen speedometer. Again let me emphasise the fact that I don't consider my speed abnormally good at all. ZENOOTH.

SUMMARY OF CORRESPONDENCE.

Mr. E. H. Mann Lawley wishes to thank the lady and gentlemen motorists who helped him on the Leamington-Birmingham road on the 6th inst.

Gainsborough M.C. and L.C.C.

Motor cycle and light car enthusiasts residing in the Gainsborough district are invited to join a newly-formed club under the above title. Communications should be addressed to the hon. treasurer, Mr. W. J. Simmons, 15, Jubilee Crescent, Gainsborough, or to the hon. secretary, Mr. W. R. Adair, 2, Alfred Street, Gainsborough.

Loughborough and District M.C.C.

There were no less than 55 starters for the speed judging competition held on the 1st inst. over a 15-mile course. This was the final round for the Minor Competitions Trophy, which the club is awarding on the result of the three less strenuous events of its programme. The winner was F. Woolley (247 Sun-Vitesse), whose time error was only 30s. There was a tie for second place between A. Bowerman and Z. Payne (249 Velocettes), error 1m., whilst five tied for third position with an error of 2m. They were A. Prince (550 Triumph), H. Holmes (499 Sunbeam sc.), A. Yates (499 Sunbeam), M. Pickering (976 Mallard-Jap) and N. Franks (490 Norton). J. L. Putt (595 Douglas sc.) was next.

The Minor Competitions Trophy for the best aggregate performance in the three competitions has been secured by A. Prince (550 Triumph).

A gymkhana was afterwards held at Shepshed, and was attended by members of the Derby and Leicester clubs.

Gravesend and District M.C.C.

Notwithstanding adverse weather conditions, some excellent results were obtained in a petrol consumption test held on the 4th inst. Machines were ridden in ordinary touring trim, and had to cover twenty miles of stiff going. Results:—

LIGHTWEIGHT CLASS. — J. Payne (349 Beardmore-Precision), 106.66 m.p.g.

MEDIUM WEIGHT CLASS.—V. Deacock (481 Scott-Squirrel), 120.3 m.p.g.

LIGHTWEIGHT SIDECAR CLASS.—S. Mann (349 Beardmore-Precision sc.), 67.79 m.p.g.

HEAVYWEIGHT SIDECAR CLASS.—1, J. Milton (976 Matchless sc.), 64.79 m.p.g. 2, J. Davidson (678 Martinsyde sc.), 65.57 m.p.g. 3, J. Dray (976 Matchless sc.), 57.14 m.p.g.

Final results on formula:—

SOLO.—V. Deacock (481 Scott-Squirrel).

SIDECAR.—1, J. Milton (976 Matchless sc.); 2, S. Mann (349 Beardmore-Precision sc.).

At the conclusion of the event a very successful concert was held. The club has decided that during the winter months whist drives, dances, and socials shall have a share in its activities.

Wallington and District M.C.C.

Owing to the fact that the local council went to the extreme of digging gullies in the road to prevent it, the club's hill climb, which was to have taken place at Marlpit Lane, Coulsdon, on the 30th ult., had to be abandoned. Speed trials were substituted, and these took place at Betchworth Park, Dorking, by kind permission of Lord Francis Hope. Fastest time of the day was made by C. Volk (494 Douglas), who covered the 557 yards course from a standing start at 73 m.p.h. Results:—

EXPERT CLASSES.

250 c.c.—1, E. C. Gordon (249 New Imperial).

350 c.c.—1, Capt. F. C. Townshend (348 Ivy).

500 c.c.—1, C. Volk (494 Douglas); 2, R. A. Green (490 o.h.v. Norton); 3, A. Gruzelier (498 Zenith-Bradshaw).

750 c.c.—1, C. Volk (494 Douglas); 2, R. A. Green (490 o.h.v. Norton); 3, A. B. Lavy (492 Sunbeam).

750 c.c. SIDECARS.—1, C. Volk (494 Douglas sc.); 2, E. Headlam (498 Zenith-Bradshaw sc.).

UNLIMITED SIDECARS.—1, C. Volk (494 Douglas sc.); 2, O. de Lissa (993 Motosacoche sc.); 3, G. Baxter (998 Harley-Davidson sc.).

GENERAL CLASSES.

250 c.c.—1, E. C. Gordon (249 New Imperial); 2, R. A. Green (249 Velocette).

350 c.c.—1, R. A. Green (249 Velocette); 2, A. Gruzelier (349 Ivy); 3, E. C. Gordon (249 New Imperial).

500 c.c.—1, R. A. Green (490 o.h.v. Norton); 2, A. Gruzelier (498 Zenith-Bradshaw); 3, A. Leeding (496 Duzmo).

750 c.c.—1, R. A. Green (490 Norton); 2, A. Gruzelier (498 Zenith-Bradshaw); 3, A. Leeding (496 Duzmo).

Uxbridge and District L.C. and M.C.C.

The second annual competition for the Committee Cup was held on the 1st inst. It took the form of a reliability trial to Eastbourne and back, the total distance of 172 miles including a short colonial section. The winner was R. Dalton (499 Sunbeam).

Hexham and District M.C.

The club successfully held its first reliability trial for a silver cup, presented by the County Garage, Hexham, on the 24th ult. The route was via Alston and Killhope to Stanhope, where tea was taken; competitors then proceeded to Edmondbyers and Riding Mill, and thence to Hexham—a total distance of approximately 65 miles.

There were two observed hills and two secret checks on the route. Fourteen competitors started.

The winners were:—

SILVER CUP.—1, P. J. Guthrie (499 Humber), 30s. error; 2, A. E. Shield (550 Triumph sc.), 38s. error; 3, W. H. Lomax (993 Matchless sc.), 50s. error.

Ipswich and District M.C.C.

Perfect weather and beautiful surroundings contributed much towards the club's last hill-climb of the season, held at Belsted Brook Hill on the 23rd ult. A new system of electrical timing was employed, the efficiency of which was so high that sixteen classes, comprising over one hundred entries, were run off in 1h. 40m.; this included time taken to allow traffic to pass on the hill. A silver bowl, presented by the B.C.M.C.M.T.U., was won by K. S. Duncan, riding a 492 c.c. Sunbeam, who covered the course in 17⅕s. The special prize for old type machines was taken by L. Harrison. Results are as follow:

TOURING CLASSES.

350 c.c.—1, F. J. Lindley (350 Wetherell), 21⅗s.; 2, W. J. Pretty (349 A.J.S.), 22⅗s.; 3, A. V. Adams (350 Diamond), 25⅘s.

500 c.c.—1, L. H. Sharp (490 Norton), 18⅕s.; 2, D. Popplewell (499 Triumph), 19s.; 3, J. F. Rose (499 Triumph), 20⅘s.

600 c.c.—1, L. H. Sharp (490 Norton), 18⅘s.; 2, D. Popplewell (499 Triumph), 19s.; 3, F. J. Lindley (350 Wetherell), 20s.

750 c.c.—1, L. H. Sharp (490 Norton), 18⅕s.; 2, D. Popplewell (499 Triumph), 19s.; 3, F. J. Lindley (350 Wetherell), 20⅕s.

UNLIMITED.—1, L. H. Sharp (490 Norton), 18⅗s.; 2, D. Popplewell (499 Triumph), 18⅘s.; 3, F. J. Lindley (350 Wetherell), 20s.

UNLIMITED SIDECARS.—1, G. Bird (976 Zenith sc.), 28s.; 2, F. H. Mayhew (499 Triumph sc.), 30s.; 3, G. C. Butler (976 Zenith sc.), 31⅕s.

TWO-STROKE CLASS.—1, A. V. Adams (269 Excelsior), 25s.; 2, C. E. Claxton (269 Excelsior), 28⅕s.; 3, J. W. Whisstock (247 Levis), 30⅘s.

STRIPPED CLASSES (EXPERTS).

350 c.c.—1, F. J. Lindley (Wetherell), 20s.; 2, W. J. Pretty (349 A.J.S.), 23s.; 3, A. V. Adams (350 Diamond), 24⅘s.

500 c.c.—1, K. S. Duncan (492 Sunbeam), 18⅗s.; 2, F. K. Portway (490 Norton), 19s.; 3, D. Popplewell (499 Triumph), 19⅕s.

600 c.c.—1, K. S. Duncan (492 Sunbeam), 17⅗s.; 2, O. G. Smart (490 Norton), 17⅘s.; 3, F. K. Portway (490 Norton), 18⅖s.

750 c.c.—1, K. S. Duncan (492 Sunbeam), 17⅘s.; 2, F. K. Portway (490 Norton), 18⅗s.; 3, O. G. Smart (490 Norton), 18⅘s.

UNLIMITED.—1, D. Popplewell (499 Triumph), 18⅕s.; 2, F. K. Portway (490 Norton), 18⅖s.; 3, K. S. Duncan (492 Sunbeam), 18⅘s.

600 c.c. SIDECARS.—1, E. C. Rose (500 N.U.T. sc.), 22⅕s.; 2, K. S. Duncan (492 Sunbeam sc.), 23⅕s.

UNLIMITED SIDECARS.—1, O. G. Smart (490 Norton sc.), 21s.; 2, E. C. Rose (500 N.U.T. sc.), 23s.; 3, K. S. Duncan (492 Sunbeam sc.), 23⅕s.

FORMULA RESULTS.

TOURING SOLO CLASSES.—J. F. Lindley (350 Wetherell), 382 points.

TOURING SIDECAR CLASSES.—G. Bird (976 Zenith sc.), 870 points.

STRIPPED SOLO CLASSES.—K. S. Duncan (492 Sunbeam), 365 points.

STRIPPED SIDECAR CLASSES.—E. C. Rose (500 N.U.T. sc.), 382 points.

Worcester and District M.C.C. and Worcestershire M.C.

Members spent an enjoyable afternoon in a visit to the works of A. J. Stevens, Ltd., of Wolverhampton, makers of the A.J.S. motor cycle. Mr. Geo. Stevens personally conducted the party through the works.

Heaton Moor M.C.C.

A short reliability trial was held on the 1st inst. over a course which proved none too easy. F. Slack (499 Sunbeam) was awarded a gold medal with a total loss of only 19 marks, whilst W. Vines (499 Sunbeam) and B. Rowley (550 Triumph) came in second and third, securing a silver medal (21 marks lost) and a bronze medal (22 marks lost) respectively.

Hinckley and District M.C.C.

Results of a reliability time trial which took place on the 30th ult. are as follows:—

1. R. E. Cleaver (550 Triumph sc.), 180 marks, gold medal.
2. F. Morgan (550 Triumph sc.), 167 marks, silver medal.
3. L. Goodman (499 Triumph), 166 marks, bronze medal.

Coatbridge, Airdrie and District M.C.C.

Postponed from earlier in the year, a formula hill-climb was held recently at Wollinsburn. The "New Imperial Cup" was won by J. Stirling on an o.h.v. A.J.S., who also made fastest time of the day. Formula results:—

275 c.c.—J. Muir (269 New Gerrard).
350 c.c.—J. Stirling (349 A.J.S.).
500 c.c.—W. Kennedy (348 New Imperial).
600 c.c.—W. Kennedy (348 New Imperial).
750 c.c.—W. Kennedy (348 New Imperial).
1,000 c.c.—W. Kennedy (348 New Imperial).
750 c.c. Sidecars.—J. Muir (490 Norton sc.).

Oxford M.C.

The informal hill-climb at Alms on October 8th again drew a big crowd. The hill was dry but extremely rough.

Many notable riders were present. E. A. Bridgman (Indian), H. Saddington (James), T. Gibson (Triumph), and Broom-Smith (Indian Chief) repeated the fast climbs they had made at Kop the day before. Bridgman and Saddington caused excitement by tearing down at speed with locked back wheels, asking in vain for bangers on.

It was not a sidecar day; the Indian and James, a Harley, a Model H Matchless, and a 292 c.c. O.K. Junior were the only sidecars to make clean climbs. L. A. Welch, on the last mentioned, under official observation of the A.C.U., made a clean climb with an adult passenger normally seated. This is believed to be the first lightweight sidecar to get up the hill.

Leinster M.C.C.

Championship races were run off at Portmarnock Sands on the 30th ult. Weather conditions were far from agreeable, rain falling during the greater part of the afternoon, while, owing to the tide having risen sooner than was anticipated, it was found necessary to substitute a five miles scratch race for the sidecar championship events. Results:—

TWO-STROKE CHAMPIONSHIP.

300 c.c.—1, J. E. Burney (225 Royal Enfield), 39m. 46s.; 2, R. Humphreys (249 Velocette), 40m. 42s.

ALL TYPES.

350 c.c.—1, S. Woods (348 Cotton), 30m. 21s.; 2, S. Gill (348 Douglas).

600 c.c.—1, A. Carton (490 Norton), 29m. 49s.; 2, S. J. Redmond (596 Indian), 30m. 22⅖s.

UNLIMITED.—1 T. E. Greene (494 Douglas), 27m. 21⅗s.; 2, S. J. Redmond (596 Indian), 32m. 16s.

FIVE MILES SCRATCH RACE.

600 c.c. SIDECARS.—1, D. Allen (490 Norton sc.); 2, C. S. Maguire (600 Humber sc.); 3, H. Nesbitt (490 Norton sc.).

UNLIMITED SIDECARS.—1, E. F. Ashton (996 Indian sc.); 2, T. J. Redmond (998 Indian sc.); 3, C. D. Maguire (976 Matchless sc.).

CURRENT HAT

Times to Light Lamps.

Oct. 19th	..	..	5.29 p.m.
„ 21st	..	..	5.25 „
„ 23rd	..	..	5.20 „
„ 25th	..	..	5.17 „

One number plate must be illuminated as above under Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Club's £100 to Local Charities.

Approximately £100 for local charities was realised at the Birmingham M.C.C. Gymkhana in September. Ticket No. 6682, held by Mr. H. C. Gross, won the bicycle prize.

Speed Limit Roads.

A hummocked surface in the main road (London-Brighton) has been seriously suggested at Sutton, Surrey, in order to limit the speed of vehicles in the High St. The hummocks proposed are a series of nine-inch high undulations calculated to be unrideable at over 10-12 m.p.h.

Electric Bulbs.

Users of electric lighting should now begin to carry spare bulbs. These essential replacements are not always available, and even when a garage does stock a miscellaneous handful, the staff usually betrays a collective colossal ignorance of voltages and amperages.

An Alec Ross Trophy.

Limited to contributions of 5s., it has been decided to open a fund to provide for a trophy to be competed for in open competition, to perpetuate the memory of the late Mr. Alec Ross, whose death created a sad loss among the A.C.U. officials. Donations may be sent to the Secretary of the A.C.U., 89, Pall Mall, London, S.W.1.

Incorrect Abbreviations.

Official announcements of records by the Auto-Cycle Union continually give the incorrect abbreviation for kilometre, which is invariably given as kilo. Kilo has really no meaning, but in France is the colloquial abbreviation for kilogramme. The correct abbreviation for kilometre is km., and for kilogramme kg. Surely the official body should set an example in accuracy.

New Solo Machine.

Very shortly a new medium-weight solo machine will make its appearance on the market as the result of a partnership between Alec Burney, who is responsible for several well-known engines, and O. M. Baldwin, the well-known Matchless rider. It will be manufactured by the Reading firm of Winters, which makes the Warwick commercial delivery three-wheeler.

Fuel Mixtures.

Benzole-petrol mixtures have now become thoroughly popular, yet a road-side garage man was lamenting that one company was about to abandon its mixture owing to lack of profit thereon.

Ferry Charges.

Cyclecarists on four wheels should avoid the Gravesend-Tilbury ferry, for they will find that they are classed with Rolls-Royces and Daimlers, etc., as "motor cars under two tons" at 6s. the single journey. Six shillings will buy three gallons of petrol.

Records in Records.

When H. Le Vack recently broke the standing ten miles record (250 c.c. class) on a 248 c.c. New Imperial-Jap, it was discovered that his lap speed of over 76 m.p.h. also gained for him the flying mile and flying kilometre records. The A.C.U. has now confirmed this.

M.C.C. Annual Dinner.

The actual date of the M.C.C. annual dinner has been announced as Thursday, December 7th, at the Wharnecliffe Rooms, Great Central Hotel, Marylebone, London, N.W.1. The president of the club, Mr. J. K. Starley, will occupy the chair. The dinner has been selected as an opportunity of celebrating the twenty-first anniversary of the club's foundation, and it is expected that a number of the original members will be present.

Swiss Pass Closed.

Owing to the presence of foot-and-mouth disease, the Swiss Touring Club informs us, the Grimsel Pass is closed to motorists.

M.C.C. Sporting Trial Awards.

Of the list of thirty-one claimants for gold medals published in our report of the M.C.C. One Day sporting trial in the issue of October 5th, only one, F. T. Sibley (Rudge), has to be deleted from the list.

Motor Cyclists!

If you desire to be posted up to date with all automobile developments, read *The Autocar* four special Show numbers, October 20th and 27th and November 3rd and 10th.

The Autocar is the representative British motoring journal, embracing all types of cars. Published every Friday—fourpence.

Award After Eight Years.

In an article in our Summer Number Mrs. G. D. Hardee, the well-known lady competitor, mentioned that an award gained by her in a Birmingham trial in 1914 never materialised; she writes to tell us that this, her first gold medal, is now safely to hand, after eight years! Mrs. Hardee has also just received a wrist watch from H. Collier and Son, Ltd., for her performance on a Matchless sidecar in this year's Scottish Six Days Trials.

A LADY CLUB ENTHUSIAST. Miss Phyllis Barker, who takes part in most of the events organised by the Bradford M.C. and L.C.C., on her P. and M. sidecar. At the start of the recent hill-climb.

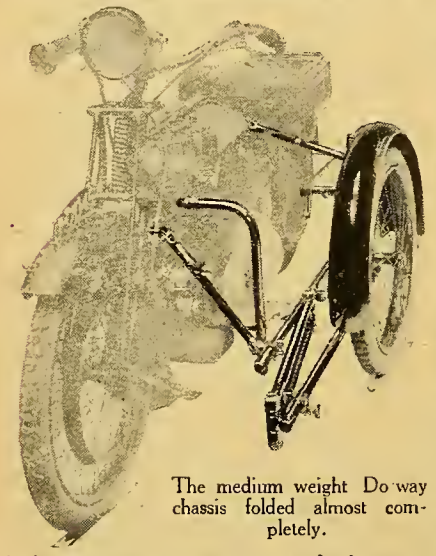
ADVANCE DETAILS OF 1923 MODELS.

SIDECAR WITH FOLDING CHASSIS.

Quickly Detachable Body on Separate Sub-Frame. The Dorway Sidecar to be Adopted by Many Makers.

IN the past there have been many attempts to produce a sidecar which will enable the complete outfit to pass through an ordinary doorway.

These attempts have been successful to a very fair degree, but never seem to have caught the public fancy to any great extent. Now a new folding chassis has been produced by the Dorway Sidecar Co., of Bellbarn Road, Birmingham, and



The medium weight Dorway chassis folded almost completely.

it is arranged to carry a standard complete coachbuilt body and springs, mounted on a light rectangular frame, which can be lifted off when it is desired to fold the chassis alongside the motor cycle in order to pass the outfit through a gate or doorway. There are several additional advantages besides the ability for passing through narrow spaces (down to 28in. wide), in that after the removal of the body the inner side of the motor cycle is completely accessible and can be reached for inspection or adjustment just as easily as the off-side. There are various modifications of the main idea being manufactured at the present time, and these will be seen at the forthcoming Olympia Exhibition on several well-known makes of motor cycle, but in each case the underlying principle is the same and may be briefly described as follows :—

The sidecar attachments are fixed to a stout tube lying parallel with the centre line of the motor cycle; at the front and rear of this tube are vertical pivots to which the cross members of the sidecar chassis are attached, these cross members are joined by a second tubular member, to which also they are pivoted so that the unit forms a construction similar to a parallel ruler; the wheel is, of course, attached by suitable fixings just in front of the rear cross members. Normally this construction is capable of being moved backwards or forwards so as to be closed up alongside the motor cycle, and it is locked rigidly in the extended position by the tubular sub-frame on which the body is mounted. This sub-frame is rectangular, and at each corner carries pegs, which drop into suitable sockets in the main chassis frame, thus locking it rigidly and preventing any tendency to close.

A Lightweight Pattern.
